## **Mathematical Solitaires Amp Games:**

The Universe as Automaton Klaus Mainzer, Leon Chua, 2011-10-01 This Brief is an essay at the interface of philosophy and complexity research trying to inspire the reader with new ideas and new conceptual developments of cellular automata Going beyond the numerical experiments of Steven Wolfram it is argued that cellular automata must be considered complex dynamical systems in their own right requiring appropriate analytical models in order to find precise answers and predictions in the universe of cellular automata Indeed eventually we have to ask whether cellular automata can be considered models of the real world and conversely whether there are limits to our modern approach of attributing the world and the universe for that matter essentially a digital reality      **Easy-to-do Entertainments and Diversions** Robert Morrison Abraham, 1961
