Recent Library Additions ,1992 **Guide to Math Materials** Phyllis J. Perry, 1997-02-15 Now it s easy to locate the materials you need to implement the new NCTM math standards Organized by such math topics as problem solving estimation number sense and numeration and geometry and spatial relationships this book shows users where to find manipulatives and materials such as attribute blocks pattern blocks clocks scales multilink cubes and prisms calculators and sorting toys It also lists specialized math books computer software and a host of other learning materials e.g. activity cards puzzles posters games reproducibles The author briefly describes each product cites grade level when given and explains possible applications Products of exceptional quality and value are highlighted and the addresses of publishers and suppliers are given A real time saver Grades K 4 Mathematics for Elementary Teachers Gary L. Musser, Blake E. Peterson, William F. Burger, 2013-09-16 Mathematics for Elementary Teachers 10th Edition establishes a solid math foundation for future teachers Thoroughly revised with a clean engaging design the new 10th Edition of Musser Peterson and Burgers best selling textbook focuses on one primary goal helping students develop a deep understanding of mathematical concepts so they can teach with knowledge and confidence The components in this complete learning program from the textbook to the e Manipulative activities to the Childrens Videos to the online problem solving tools resource rich website and Enhanced WileyPLUS work in harmony to help achieve this goal WileyPLUS sold separately from text From Curve Fittina to Machine Learning Achim Zielesny, 2011-07-28 The analysis of experimental data is at heart of science from its beginnings But it was the advent of digital computers that allowed the execution of highly non linear and increasingly complex data analysis procedures methods that were completely unfeasible before Non linear curve fitting clustering and machine learning belong to these modern techniques which are a further step towards computational intelligence. The goal of this book is to provide an interactive and illustrative guide to these topics It concentrates on the road from two dimensional curve fitting to multidimensional clustering and machine learning with neural networks or support vector machines Along the way topics like mathematical optimization or evolutionary algorithms are touched All concepts and ideas are outlined in a clear cut manner with graphically depicted plausibility arguments and a little elementary mathematics. The major topics are extensively outlined with exploratory examples and applications The primary goal is to be as illustrative as possible without hiding problems and pitfalls but to address them The character of an illustrative cookbook is complemented with specific sections that address more fundamental questions like the relation between machine learning and human intelligence These sections may be skipped without affecting the main road but they will open up possibly interesting insights beyond the mere data massage All topics are completely demonstrated with the aid of the commercial computing platform Mathematica and the Computational Intelligence Packages CIP a high level function library developed with Mathematica's programming language on top of Mathematica's algorithms CIP is open source so the detailed code of every method is freely accessible All examples

and applications shown throughout the book may be used and customized by the reader without any restrictions The target readerships are students of computer science and engineering as well as scientific practitioners in industry and academia who deserve an illustrative introduction to these topics Readers with programming skills may easily port and customize the Catalogue of Title-entries of Books and Other Articles Entered in the Office of the Librarian of Congress, at Washington, Under the Copyright Law ...
