Recent Advances in Mathematics Textbook Research and Development Chunxia Qi, Lianghuo Fan, Jian Liu, Qimeng Liu, Lianchun Dong, 2024-11-08 This open access book documents the issues and developments in mathematics textbook research as presented at the Fourth International Conference on Mathematics Textbook Research and Development ICMT 4 held at Beijing Normal University China in November 2022 It showcases research and practical experiences from the mathematics textbook research field from over 20 countries and reflects the current trend of curriculum reform globally in terms of mathematics textbook research It helps readers gain knowledge about various issues related to the development content and use of mathematics textbooks from kindergarten to university level in and out of school settings in paper or digital format as well as the historical and recent developments and future directions in mathematics textbook research ICMT 4 continues the successful series started in 2014 with the first ICMT held in Southampton UK which was followed in 2017 by ICMT 2 in Rio de Janeiro Brazil and in 2019 by ICMT 3 in Paderborn Germany Mathematical Modelling for Sustainable Development Marion Hersch, 2006-01-02 Many people are convinced that Sustainable Development and Mathematics are completely unrelated Sustainable Development in its role of a value laden imperative for polluting and over consuming societies seems to be totally unconnected to mathematical reasoning and ignorant of the values behind its symbols Still they are not only connected they need each other Mathematics needs Sustainable Development When science was gradually reinvented in European medieval societies it was legitimised as contributing to the disclosure of God's divine creation The conflicts that emerged became well known as a result of the clash between Galileo and the Church Science found a new legitimacy through recognition that it was a powerful force against superstition In the Enlightenment the argument was pushed forward by attributing Progress to the advancement of science science could produce a better world by promoting rationality In our modern society science has become intimately linked to technology Science for its own sake unfortunately rarely has positive outcomes in terms of research grant applications Meanwhile science and technology and the progress they are supposed to produce meet with wide scale scepticism We all know of the current global problems climate change resource depletion a thinning ozone layer space debris declining biodiversity malnutrition dying ecosystems global inequity and the risk of unprecedented nuclear wars Science has to engage with these problems or lose its legitimacy

Why Machines Will Never Rule the World Jobst Landgrebe, Barry Smith, 2022-08-12 The book's core argument is that an artificial intelligence that could equal or exceed human intelligence sometimes called artificial general intelligence AGI is for mathematical reasons impossible It offers two specific reasons for this claim Human intelligence is a capability of a complex dynamic system the human brain and central nervous system Systems of this sort cannot be modelled mathematically in a way that allows them to operate inside a computer In supporting their claim the authors Jobst Landgrebe and Barry Smith marshal evidence from mathematics physics computer science philosophy linguistics and biology setting up their book around three central questions What are the essential marks of human intelligence What is it that researchers try to do when they attempt to achieve artificial intelligence AI And why after more than 50 years are our most common interactions with AI for example with our bank's computers still so unsatisfactory Landgrebe and Smith show how a widespread fear about AI's potential to bring about radical changes in the nature of human beings and in the human social order is founded on an error There is still as they demonstrate in a final chapter a great deal that AI can achieve which will benefit humanity But these benefits will be achieved without the aid of systems that are more powerful than humans which are as impossible as AI systems that are intrinsically evil or able to will a takeover of human society

Learning and Teaching Real World Problem Solving in School Mathematics Murad Jurdak, 2016-05-30 The ultimate aim of this book is to identify the conceptual tools and the instructional modalities which enable students and teachers to cross the boundary between school mathematics and real world problem solving The book identifies examines and integrates seven conceptual tools of which five are constructs activity theory narrative modeling critical mathematics education ethnomathematics and two are contexts STEM and the workplace The author develops two closely linked multiple perspective frameworks one for learning real world problem solving in school mathematics which sets the foundations of learning real world problem solving in school mathematics and one for teaching real world problem solving in school mathematics which explores the modalities of teaching real world problem solving in school mathematics The book is composed as on the one hand a high level theoretical scholarly work on real world problem solving in school mathematics and on the other hand a set of twelve narratives which put together constitute a thought provoking and moving personal and professional autobiography Mogens Niss These narratives combine aspects of Murad's personal trajectory as an individual with those points in his professional career at which he became aware of perspectives on and approaches to mathematics education that were both significant in and of themselves and instrumental for the specific scholarly endeavor presented in the book Mogens Niss

The World Has Curves Julia Savacool, 2009-09-15 American women today are faced with a paradox they uphold an ideal of beauty long lean toned that increasingly bears little resemblance to truth about their size Women around the world are spending more time money and energy pursuing this ideal than ever before So why does the perfect body remain so elusive And why does the definition of ideal vary so widely between countries and cultures The World Has Curves is journalist Julia Savacool's attempt to answer these questions She takes readers on a world tour from China where the plastic surgery industry is booming to South Africa where a heavier shape signals health in a country ravaged by disease to Afghanistan where the burka once again reigns supreme Through extensive reporting and intimate interviews she offers readers an understanding of how body ideals in America and abroad have come to be inextricably linked to the economics of a culture and the impact of globalization From news programs to reality shows from prime time comedy to national advertising campaigns the topic of women's bodies and our collective judgment of the perfect shape is ever present This engaging narrative is newsworthy and provocative and will advance our cultural conversation
