Mathematics Experiences For The Early Childhood Years:

Mathematics Experiences for the Early Childhood Years Linda Barron,1979 *More Than Counting* Sally Moomaw,Brenda Hieronymus,2011-02-08 More than one hundred math activities for young children that incorporate early learning standards **Early Childhood Education** Petr G. Grotewell,Yanus R. Burton,2008 This book focuses on early childhood education which spans the human life from birth to age 8 Infants and toddlers experience life more holistically than any other age group Social emotional cognitive language and physical lessons are not learned separately by very young children Adults who are most helpful to young children interact in ways that understand that the child is learning from the whole experience not just that part of the experience to which the adult gives attention Although early childhood education does not have to occur in the absence of the parent or primary caregiver this term is sometimes used to denote education by someone other than these the parent or primary caregiver Both research in the field and early childhood educators view the parents as an integral part of the early childhood education process Early childhood education takes many forms depending on the theoretical and educational beliefs of the educator or parent Other terms that is often used interchangeably with early childhood education are early childhood learning early care and early education Much of the first two years of life are spent in the creation of a child s first sense of self or the building of a first identity Because this is a crucial part of children s makeup how they first see themselves how they think they should function how they expect others to function in relation to them early care must ensure that in addition to carefully selected and trained caregivers links with family home culture and home language are a central part of program policy If care becomes a substitute for rather than a support of family children may develop a less than positive sense of who they are and where they come from because of their child care experience

Contemporary Perspectives on Mathematics in Early Childhood Education Olivia Saracho,Bernard Spodek,2008-02-01 This volume provides a comprehensive critical analysis of the research in mathematics education for young children The researchers who conducted the critical analysis focused on the relationship between 1 mathematics learning in the early years and domain specific approaches to cognitive development 2 the children s social learning and their developing understanding of math and 3 the children s learning in a natural context and their understanding of mathematics concepts The work of these scholars can help guide those researchers who are interested in pursuing studies in early childhood mathematics in a specific area of study This volume will facilitate the research conducted by both novice and expert researchers The volume has accomplished its major goals which consists of critically analyzing important research in a specific area that would be most useful in advancing the field and provide recommendations for both researchers and educators

Reinventing STEM in Early Childhood Education Eugene Geist,2025-05-09 Teaching STEM to young children is about more than helping them learn their numbers and facts It is an important and complex process that to be effective should honor the way children s brains are developing This book outlines how early childhood educators can best support young children s STEM journeys as children naturally take in information about their environment synthesize it and grow in the process This comprehensive text details different theories of learning research on

how young brains develop practical information on preparing your environment and yourself for teaching STEM to children guidance for supporting diverse populations of students and developmental guidelines sample standards resources and lesson plans Organized chronologically the book connects relevant STEM topics with each developmental age range and outlines common school standards for each grade Reinventing STEM in Early Childhood Education is meant to be a core text for preservice teachers in math and science methods courses and is also important reading for teacher educators and professional development programs Early Childhood Mathematics Education Research Julie Sarama, Douglas H.

Clements, 2009-04-01 This important new book synthesizes relevant research on the learning of mathematics from birth into the primary grades from the full range of these complementary perspectives At the core of early math experts Julie Sarama and Douglas Clements's theoretical and empirical frameworks are learning trajectories detailed descriptions of children's thinking as they learn to achieve specific goals in a mathematical domain alongside a related set of instructional tasks designed to engender those mental processes and move children through a developmental progression of levels of thinking Rooted in basic issues of thinking learning and teaching this groundbreaking body of research illuminates foundational topics on the learning of mathematics with practical and theoretical implications for all ages Those implications are especially important in addressing equity concerns as understanding the level of thinking of the class and the individuals within it is key in serving the needs of all children **Engaging Families as Children's First Mathematics Educators** Sivan

Phillipson, Ann Gervasoni, Peter Sullivan, 2016-11-21 This book explores how professionals can engage and inspire parents to support their young children's mathematics learning Bringing together international experts researchers and scholars it proposes a framework for engaging with and supporting parents including those who are less aware of the crucial development of children's mathematical skills in the early years Focusing on mathematics learning from birth to 5 years the book's underlying assumption is that it is possible to offer guidance to professionals working with families with young children concerning how to engage and support families in the area of mathematics learning including those families who seem alienated from education services Specifically the respective chapters present a framework for understanding children's early mathematical development and the important role of families in this regard They describe effective strategies for engaging families in their children's mathematics learning including those who are marginalised and experience multiple disadvantages so that all families can best support their children's mathematical learning and their development of positive attitudes towards learning In closing hurdles and opportunities within the systems surrounding family engagement are addressed Language, Learning, and Culture in Early Childhood Ann Anderson, Jim Anderson, Jan Hare, Marianne McTavish, 2015-12-07 Complex factors affect young children and their families in today's increasingly diverse world characterized by globalization the transnational movement of people and neo liberal government policies in western and industrialized countries This book focuses on three of these factors culture language and learning and how they affect

children's development and learning in the context of their communities, families and schools. Taking an ecological perspective, it challenges normative and hegemonic views of young children's language literacy and numeracy development and offers examples of demonstrated educational practices that acknowledge and build on the knowledge that children develop and learn in culturally specific ways in their homes and communities. The authors highlight issues and perspectives that are particular to Indigenous people who have been subjected to centuries of assimilationist and colonialist policies and practices and the importance of first or home language maintenance and its cognitive, cultural, economic, psychological and social benefits. Handbook of International Research in Mathematics Education Lyn D.

English, David Kirshner, 2010-04-02 The second edition continues the mission of bringing together important new mathematics education research that makes a difference in both theory and practice. It updates and extends the Handbook's original key themes and issues for international research in mathematics education for the 21st century, namely: priorities in international mathematics education research; lifelong democratic access to powerful mathematical ideas; advances in research methodologies; influences of advanced technologies. Each of these themes is examined in terms of learners, teachers and learning contexts, with theory development being an important component of all these aspects. This edition also examines other catalysts that have gained increased import in recent years, including a stronger focus on the teacher and teacher practice, a renewed interest in theory development, an increased focus on the mathematics needed in work place settings and a proliferation of research designs and methodologies that have provided unprecedented opportunities for investigating and ultimately improving mathematical teaching and learning. This edition includes ten totally new chapters; all other chapters are thoroughly revised and updated.

Forging Connections in Early Mathematics Teaching and Learning Virginia Kinnear, Mun

Yee Lai, Tracey Muir, 2017-12-12 This edited book promotes thinking, dialogue, research and theorisation on multiple ways of making connections in mathematics teaching and learning in early childhood education. The book addresses some key challenges in research policy and practice in early childhood mathematics education. It examines diverse ways for learning experiences to connect young children to mathematics and the importance of forging connections between mathematics and young children's lives as key elements in their engagement with mathematics. Each chapter provides research or theoretical provocations and pedagogical implications for connecting children's lived experiences and ways of learning in mathematics teaching. The chapters are drawn from a range of international authors who raise important ideas within the overall context of current research and consider the theoretical and practical implications of their research. As such, the book advances current thinking on mathematics teaching and learning for children in the early years, from birth to eight years, with an emphasis on children aged birth to 5 years. It considers the purpose and value in connecting mathematics teaching and

learning to children's lives and provides provocations for both educators and researchers on the many under researched and under represented aspects of early years mathematics teaching and learning
