Max Horkheimer and Theodor W Adorno first conceived of the critical project in the 1930s critical theory steadfastly opposed the mathematization of thought Mathematics flattened thought into a dangerous positivism that led reason to the barbarism of World War II The Mathematical Imagination challenges this narrative showing how for other German Jewish thinkers such as Gershom Scholem Franz Rosenzweig and Siegfried Kracauer mathematics offered metaphors to negotiate the crises of modernity during the Weimar Republic Influential theories of poetry messianism and cultural critique Handelman shows borrowed from the philosophy of mathematics infinitesimal calculus and geometry in order to refashion cultural and aesthetic discourse Drawn to the austerity and muteness of mathematics these friends and forerunners of the Frankfurt School found in mathematical approaches to negativity strategies to capture the marginalized experiences and perspectives of Jews in Germany Their vocabulary in which theory could be both mathematical and critical is missing from the intellectual history of critical theory whether in the work of second generation critical theorists such as Jürgen Habermas or in contemporary critiques of technology The Mathematical Imagination shows how Scholem Rosenzweig and Kracauer's engagement with mathematics uncovers a more capacious vision of the critical project one with tools that can help us intervene in our digital and increasingly mathematical present The Mathematical Imagination is available from the publisher on an open access basis

The Prehistory of Mathematical Structuralism Erich H. Reck, Georg Schiemer, 2020 This edited volume explores the previously underacknowledged pre history of mathematical structuralism showing that structuralism has deep roots in the history of modern mathematics The contributors explore this history along two distinct but interconnected dimensions First they reconsider the methodological contributions of major figures in the history of mathematics Second they re-examine a range of philosophical reflections from mathematically inclined philosophers like Russell Carnap and Quine whose work led to profound conclusions about logical epistemological and metaphysical aspects of structuralism

Pierre Duhem St.L. Jaki,2012-12-06 A hundred years have now gone by since in the midsummer of 1882 Pierre Duhem a graduate of College Stanislas completed with brilliant success his entrance exams to the Ecole Normale Supérieure and embarked on his career as a theoretical physicist His father a textile salesman hoped that Hierre would pursue a career in business one of the few professional fields where perhaps he would not have succeeded Not that young Duhem lacked sense for the practical He could have easily made a name for himself as an artist had he developed professionally his skill to draw portraits and landscapes His ability to make a point and his readiness to join in a debate could have earned him fame as a lawyer A potential actor was in sight when he entertained friends with mimicry That as a student of physics he entered and stayed first in his class at the Ecole Normale did not thwart his talents for the life sciences No less a biologist than Pasteur tried to obtain Duhem for assistant His command of Greek and Latin would have secured him a career as a classicist He was a Frenchman not to be met too often whose rightful admiration for and mastery of his native tongue did not prove a barrier to the major modern languages As one who taught himself the complex art of medieval paleography he could easily have mastered the many auxiliary sciences needed by a consummate historian **Voices of Historical and Contemporary**

political act in which children teachers parents and policy makers are made visible as subjects As they learn about mathematics children are also learning about themselves who they are who they might become We can choose to listen or not to what children have to say about learning mathematics Such choices constitute us in relations of power Mathematical know how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well being of nations With the globalisation of education in an increasingly market oriented world mathematics has received intensified attention in the first decade of the twenty first century with a shifting emphasis on utilitarian aspects of mathematics This is reflected in the reconceptualisation of mathematical competence as mathematical literacy loosely conceived as those ways of thinking reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active empowered and participatory citizens It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks raise standards enhance achievement close gaps and leave no child behind in mathematics education Industries have sprung up around the design administration and monitoring of standardised assessment to measure and compare children s mathematical achievement against identified benchmarks and each other

Equity and Quality Dimensions in Educational Effectiveness Leonidas Kyriakides,Bert Creemers,Evi Charalambous,2018-01-03 This book aims to make a contribution to the theory research and practice on quality and equity in education by providing a comprehensive overview of these two dimensions of educational effectiveness and proposing a methodological instrument that may be used to measure the contribution that each school can make to promoting equity The importance of using this instrument is demonstrated by analysing results of various effectiveness studies conducted over the last decade The book draws upon research across the world especially research conducted in the Europe the United States and Australasia It is shown that promoting equity has no negative effect on the promotion of quality The importance of using this methodological instrument to identify factors that promote both quality and equity at different educational levels i e teacher school and educational system is stressed The book also demonstrates how we can measure stability and changes in the effectiveness status of schools over time in terms of fostering quality and equity In addition it underlines the importance of identifying factors measuring changes in the effectiveness status of schools in terms of equity and points to the alternative strategies that can be used at school and system level In our attempt to encourage the further development and use of this methodology for school improvement purposes we demonstrate how experimental studies can be conducted to discover whether and under which conditions the proposed methodology can help schools promote both quality and equity Finally implications for school evaluation research educational policy and practice are drawn In this way the book contributes significantly to the debate on how quality and equity can be achieved and encourages policy makers and practitioners not to view these two dimensions of effectiveness as

being in competition with each other but as constituting the major objectives of any reform policy and or improvement effort at school and or national levels

A World Perspective Through 21st Century Eyes R. K. Koslowsky, 2004 As a community of citizens in the twenty first century we are fortunate to have emerged from the biological evolution of the past million years and the cultural evolution of the past ten thousand years We have enjoyed an abundance of time and freedom to explore the why and how things work and continue to push the limits of the present technological evolution A World Perspective through 21st Century Eyes is not a history textbook or a science history book It is not a treatise on philosophy or theology Rather it is a book on the major themes in the evolution of man and the impact of science thereto It is a book with the major theme addressing the impact of science on society one in which the technical community has not had time to digest and reflect upon during the past fifty years With the time pressures of the day and in the specializations in which we operate there is precious little surplus energy available to us for leisure activity of our choosing I trust that this treatment will sketch a broad outline that the scientific and technological community has had on society over the past five thousand years and potential areas where further impacts will be made in the next one hundred years To this effort I believe the reader will find his or her surplus energy well spent An engineer to which my life s training was aimed is expected to have a complete and thorough knowledge of some subjects This is true for most of us in the technical community therefore it is also true that most of us choose not to write about many topics of which we are not master I feel this separation of subjects and isolation of scientists and technologists does a disservice to others in other disciplines who look for different views in order to maintain a balanced perspective on the myriad of issues confronting them each day Those of us who have grown up in the Western Culture without a technical education may find this discussion exciting in the different way it is broached Just as an engineer appreciates the beauty of the Golden Gate Bridge and the precision of the clock the inspiration from watching the setting sun reading a biblical passage or viewing a Bouguereau painting can motivate and enlighten that same engineer In this way I aim to provide the reader either technical or non technical with an appreciation of the evolving world from the viewpoint of one who has been technically trained I cannot reproduce the sunset paint or sing to inspire but I hope these insights motivate you to pause and consider your area of expertise with the aim for you to contribute that which has inspired and motivated you

Teaching Secondary Mathematics as if the Planet Matters Alf Coles, Richard Barwell, Tony Cotton, Jan Winter, Laurinda Brown, 2013-07-18 This book moves us beyond a theoretical pondering of the issues and makes concrete suggestions for teachers and students for how things can be different in mathematics classrooms This is long overdue Peter Gates University of Nottingham Teaching Mathematics as if the Planet Matters explores how Mathematics teachers can develop approaches to curriculum and learning which help students understand the nature of the contemporary world It sets out a model for teaching and learning that allows teachers to examine existing approaches to teaching and draw upon the insights of mathematics as a discipline to help students relate classroom mathematics to global issues such as climate change the

economy food supplies biodiversity human rights and social justice Including practical examples suggestions for teaching activities and detailed further reading sections the book covers the mathematics of description in the measuring recording and statistical analysis that informs our knowledge of climate change consumption and sustainability the mathematics of prediction in the modelling used by governments scientists and businesses to plan roads power stations and food supplies and their effects the mathematics of communication in the news reports blogs and environmental campaigns incomplete without graphs charts and statistics The true worth of a school subject is revealed in how far it can account for and respond to the major issues of the time The issue of the environment cuts across subject boundaries and requires an interdisciplinary response Mathematics teachers are part of that response and they have a crucial role in helping students to respond to environmental issues and representations *The Education of African-Americans* Charles V. Willie, Antoine M.

Garibaldi, Wornie L. Reed, 1991-05-23 As part of a project on the status of African Americans that was initiated by the William Monroe Institute for the Study of Black Culture at the University of Massachusetts at Boston this volume takes a comprehensive look at the education of African Americans specifically early childhood through postsecondary education and relevant public policy issues since 1940 The list of contributors to the study includes both white and black scholars who are affiliated with primarily urban institutions located in the Northwest the South and on the East Coast who are deeply committed to educational research By focusing on the known status of the education of African Americans to date and the additional factors which need to be considered in order to develop appropriate educational strategies these essays evaluate current programs and provide recommendations for public policy improvements Each essay addresses some aspect of the history of the education of African Americans or the effectiveness of pertinent laws and policies enacted within the past fifty years Trends in the educational advancement of Blacks are clearly defined with particular focus on the forecasting of circumstances that could affect future progress Topics ranging from counseling and guidance of minority children to the need for more Black teachers and the continuing struggle with racial violence on campus demonstrate the broad scope of this volume Suggestions for further reading on a specific topic appear in the list of references at the end of each chapter
