Resources in Education ,2001-04 **Research in Education** ,1973 *Researching Practitioner Inquiry as Professional Development* Rose M. Pringle,2020-12-14 This book presents the authentic voices of science teachers engaged in practitioner inquiry as one component of a comprehensive professional development program Practitioner inquiry as a genre of educational research allows teachers to intentionally study their practices thus generating practical solutions to problems in their teaching and students learning The teachers voices allowed us to enter their science classrooms to observe their posture and practices as reflective practitioners They encountered issues such as culturally responsive teaching and low literacy proficiency and metacognitive skills among their struggling science learners Their firsthand accounts provide new insights about practitioner inquiry as a tool to support teachers continuous learning regardless of the disciplinary content areas The book therefore provides a blueprint that can inform inservice teacher educators and support school and district administrators as they seek to nurture teachers professional growth **ERIC Clearinghouse Publications** ,1983

Teaching and Learning Mathematics through Variation Rongjin Huang, Yeping Li, 2017-02-06 Efforts to improve mathematics teaching and learning globally have led to the ever increasing interest in searching for alternative and effective instructional approaches from others Students from East Asia such as China and Japan have consistently outperformed their counterparts in the West Yet Bianshi Teaching teaching with variation practice which has been commonly used in practice in China has been hardly shared in the mathematics education community internationally This book is devoted to theorizing the Chinese mathematical teaching practice Bianshi teaching that has demonstrated its effectiveness over half a century examining its systematic use in classroom instruction textbooks and teacher professional development in China and showcasing of the adaptation of the variation pedagogy in selected education systems including Israel Japan Sweden and the US This book has made significant contributions to not only developing the theories on teaching and learning mathematics through variation but also providing pathways to putting the variation theory into action in an international context This book paints a richly detailed and elaborated picture of both teaching mathematics and learning to teach mathematics with variation Teaching with variation and variation as a theory of learning are brought together to be theorized and exemplified through analysis of teaching in a wide variety of classrooms and targeting both the content and processes of mathematical

thinking Highly recommended Kaye Stacey Emeritus Professor of Mathematics Education University of Melbourne Australia Many teachers in England are excited by the concept of teaching with variation and devising variation exercises to support their pupils mastery of mathematics However fully understanding and becoming proficient in its use takes time This book provides a valuable resource to deepen understanding through the experiences of other teachers shared within the book and the insightful reflections of those who have researched this important area Debbie Morgan Director for Primary Mathematics National Centre for Excellence in the Teaching of Mathematics United Kingdom **Canadiana** ,1986 **The Journal of the National Education Association** National Education Association of the United States,1923 *El-Hi Textbooks in Print* ,1984 *Resources in Education* ,1996 International Encyclopedia of Education ,2009-04-17 The field of education has experienced extraordinary technological societal and institutional change in recent years making it one of the most fascinating yet complex fields of study in social science Unequaled in its combination of authoritative scholarship and comprehensive coverage International Encyclopedia of Education Third Edition succeeds two highly successful previous editions 1985 1994 in aiming to encapsulate research in this vibrant field for the twenty first century reader Under development for five years this work encompasses over 1 000 articles across 24 individual areas of coverage and is expected to become the dominant resource in the field Education is a multidisciplinary and international field drawing on a wide range of social sciences and humanities disciplines and this new edition comprehensively matches this diversity The diverse background and multidisciplinary subject coverage of the Editorial Board ensure a balanced and objective academic framework with 1 500 contributors representing over 100 countries capturing a complete portrait of this evolving field A totally new work revamped with a wholly new editorial board structure and brand new list of meta sections and articles Developed by an international panel of editors and authors drawn from senior academia Web enhanced with supplementary multimedia audio and video files hotlinked to relevant references and sources for further study Incorporates ca 1 350 articles with timely coverage of such topics as technology and learning demography and social change globalization and adult learning to name a few Offers two content delivery options print and online the latter of which provides anytime anywhere access for multiple users and superior search functionality via ScienceDirect as well as multimedia content including audio and video files Virginia Journal of Education ,1924 **Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds** Carolyn Kieran,2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra well known authors such as Luis Radford John Mason Maria Blanton Deborah Schifter and Max Stephens as well as younger scholars from Asia Europe South Africa the Americas Australia and New Zealand present novel theoretical perspectives and their latest findings The book is divided into three

parts that focus on i epistemological mathematical aspects of algebraic thinking ii learning and iii teaching and teacher development Some of the main threads running through the book are the various ways in which structures can express themselves in children s developing algebraic thinking the roles of generalization and natural language and the emergence of symbolism Presenting vital new data from international contexts the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades
