Mathematical Programming Methods for Geographers and Planners James Killen, 2021-11-30 Originally published in 1983 this was the first text to offer an in depth treatment of mathematical programming methods explained from first principles It considers all the major programming techniques and fully explains key terms illustrates theories with detailed examples and shows how the various skills are applied in practice It will be invaluable in both the academic world and to policy formulators and planners who make extensive use of the methods described Mathematics for geographers and planners Alan Geoffrey Wilson, 1975

Geography and Geographers Ron Johnston, James Sidaway, 2015-12-22 Explores the relationship between human and physical geography All chapters updated in the new edition to reflect new literature and changes in the discipline Chapter One systematically considers representations of geographical thought The closing chapter develops an explicit argument about what has made human geography distinctive Draws on a wide reading of the geographical literature produced during a fifty year period characterised by both growth in the number of academic geographers and substantial shifts in conceptions of the discipline s scientific rationale *Mathematical Modelling Techniques* Rutherford Aris, 2012-06-29 Engaging elegantly written Applied Mathematical Modelling Mathematical modelling is a highly useful methodology designed to enable mathematicians physicists and other scientists to formulate equations from a given nonmathematical situation In this elegantly written volume a distinguished theoretical chemist and engineer sets down helpful rules not only for setting up models but also for solving the mathematical problems they pose and for evaluating models The author begins with a discussion of the term model followed by clearly presented examples of the different types of models finite statistical stochastic etc He then goes on to discuss the formulation of a model and how to manipulate it into its most responsive form Along the way Dr Aris develops a delightful list of useful maxims for would be modellers In the final chapter he deals not only with the empirical validation of models but also with the comparison of models among themselves as well as with the extension of a model beyond its original domain of validity Filled with numerous examples this book includes three appendices offering further examples treated in more detail These concern longitudinal diffusion in a packed bed the coated tube chromatograph with Taylor diffusion and the stirred tank reactor Six journal articles a useful list of references and subject and name indexes complete this indispensable well written guide A most useful readable and stimulating book to be read both for pleasure and for enlightenment Bulletin of the Institute of Mathematics and Its Applications Urban Planning Methods Ian Bracken, 2014-04-04 In order to develop and exercise their skills urban

planners need to draw upon a wide variety of methods relating to plan and policy making urban research and policy analysis More than ever planners need to be able to adapt their methods to contemporary needs and circumstances This introductory textbook focuses on the need to combine traditional research methods with policy analysis in order to understand the true nature of urban planning processes It describes both planning methods and their underlying concepts and principles illustrating applications by reference to the daily activities of planning including the assessment of needs and preferences of the population the generation and implementation of plans and policies and the need to take decisions related to the allocation of land population change employment housing and retailing Ian Bracken also provides a comprehensive guide to the more specialized research literature and case studies of contemporary urban planning practice This book was first published in 1981 *Complex Spatial Systems* Alan Geoffrey Wilson, 2014-09-25 A comprehensive core text from the expert in the field introducing students to the main issues of spatial systems modelling and analysis **A Guide to Information Sources in the Geographical Sciences** Stephen Goddard, 1983-01-01 Geography is a wide ranging discipline and the number of information sources available is truly enormous These include printed books and journal articles maps satellite photographs archives statistical information and much else One particular problem facing geographers is that when one studies a foreign country information may be available only in the foreign country and difficult to obtain This book discusses the information sources available to geographers *A Century of British Geography* Ron Johnston, Michael Williams, 2022-09-11 These essays trace the evolution of British geography as an academic discipline during the last hundred years and stress how the study of the world we live in is fundamental to an understanding of its problems and concerns Never before has such an ambitious and wide ranging review been attempted and never before has it been done with so much knowledge and passion The principal themes covered in this volume are those of environment place and space and the applied geography of map making and planning The volume also addresses specific issues such as disease urbanization regional viability and ethics and social problems This lively and accessible work offers many insights into the minds and practices of today's geographers **The Planner**, 1980 **The Mathematical Gazette**, 1976 Complexity, Language, and Life: Mathematical Approaches John L. Casti, Anders Karlqvist, 2012-12-06 In May 1984 the Swedish Council for Scientific Research convened a small group of investigators at the scientific research station at Abisko Sweden for the purpose of examining various conceptual and mathematical views of the evolution of complex systems The stated theme of the meeting was deliberately kept vague with only the purpose of discussing alternative mathematically based approaches to the modeling of evolving processes being given as a guideline to the participants In order to limit the scope to some degree it was decided to emphasize living rather than nonliving processes and to invite participants from a range of disciplinary specialities spanning the spectrum from pure and applied mathematics to geography and analytic philosophy The results of the meeting were quite extraordinary while there was no intent to focus the papers and discussion into predefined channels

an immediate self organizing effect took place and the deliberations quickly oriented themselves into three main streams conceptual and formal structures for characterizing system complexity evolutionary processes in biology and ecology the emergence of complexity through evolution in natural languages The chapters presented in this volume are not the proceedings of the meeting Following the meeting the organizers felt that the ideas and spirit of the gathering should be preserved in some written form so the participants were each requested to produce a chapter explicating the views they presented at Abisko written specifically for this volume The results of this exercise form the volume you hold in your hand

Geographers Elizabeth Baigent, André Reyes Novaes, 2017-12-14 Geographers Biobibliographical Studies Volume 36 focuses on 20th century Britain and 19th and 20th century France Six essays on individual geographers are complemented by a group article which describes the building of a French school of geography From Britain the life of Sir Peter Hall one of the most distinguished geographers of recent times and a man widely known outside the discipline is set alongside memoirs of Bill Mead who made the rich geography of the Nordic countries come alive to geographers and others in the Anglophone world Michael John Wise and Stanley Henry Beaver who made their mark through building up the institutions where academic geography was practised and through teaching and Anita McConnell whose geographical training shaped her museum curation and studies of the history of science From France the individual biography of Andr Meynier is juxtaposed with group article on the first five professors of geography at Clermont Ferrand These intellectual biographies collectively show geography and geographers profoundly affected by wider historical events the effect of war particularly the Second World War and the shaping of post war society They show the value of geographical scholarship in elucidating local circumstances and in planning national conditions and as a basis for local national and international friendship **Indian Geography** Anu Kapur, 1998 *Environment & Planning*, 1998 *Mathematisation and Demathematisation*, 2007-01-01 In this volume scholars from diverse strands of research have contributed their perspectives on a process of mathematisation which renders social economical or political relationships increasingly formal At the same time mathematical skills lose their importance as they become replaced by diverse technological tools a process of demathematisation takes place The computerization of financial transactions calculation of taxes and fees comparison of prices as well as orientation by means of GPS visualisation of complex data and electronic voting systems all these mathematical technologies increasingly penetrate the lifestyle of consumers What are the perils and promises of this development Who is in charge who is affected who is excluded A common concern of all the authors of this volume is an attempt to draw attention to issues related to the formatting power of mathematics and to its role as implicit knowledge which results in a process of demathematisation This process having once received considerable attention is now threatened to be eclipsed by the proliferation of a discussion of school mathematics which shows a tendency of cutting off its own philosophical and political roots Taken together the contributions reveal a rather complex picture They draw attention to the importance of clarifying epistemological societal

and ideological issues as a prerequisite for a discussion of curriculum

Growth and Diffusion Phenomena Robert B. Banks, 2013-04-17

Diffusion and growth phenomena abound in the real world surrounding us. Some examples: growth of the world's population, growth rates of humans, public interest in news events, growth and decline of central city populations, pollution of rivers, adoption of agricultural innovations and spreading of epidemics, and migration of insects. These and numerous other phenomena are illustrations of typical growth and diffusion problems confronted in many branches of the physical, biological, and social sciences as well as in various areas of agriculture, business, education, engineering, medicine, and public health. The book presents a large number of mathematical models to provide frameworks for the analysis and display of many of these. The models developed and utilized commence with relatively simple exponential, logistic, and normal distribution functions. Considerable attention is given to time-dependent growth coefficients and carrying capacities. The topics of discrete and distributed time delays, spatial-temporal diffusion, and diffusion with reaction are examined. Throughout the book, there are a great many numerical examples. In addition, and most importantly, there are more than 50 in-depth illustrations of the application of a particular framework or model based on real-world problems. These examples provide the reader with an appreciation of the intrinsic nature of the phenomena involved. They address mainly readers from the physical, biological, and social sciences as the only mathematical background assumed is elementary calculus. Methods are developed as required, and the reader can thus acquire useful tools for planning, analyzing, designing, and evaluating studies of growth, transfer, and diffusion phenomena. The book draws on the author's own hands-on experience in problems of environmental diffusion and dispersion as well as in technology transfer and innovation diffusion.
