Talking Mathematics in School Magdalene Lampert, Merrie L. Blunk, 1998-10-13 The teaching and learning of mathematics in K 12 classrooms is changing New curricula and methods engage learners in working on real problems An essential feature of this work involves teacher and students in talking mathematics How can students learn to do this kind of talking What can they learn from doing it This book addresses these questions by looking at the processes of formulating problems interpreting contexts in which problems arise and arguing about the reasonableness of proposed solutions The studies in this volume seek to retain the complexity of classroom practice rather than looking at it through a particular academic lens **Intentional Talk** Elham Kazemi, Allison Hintz, 2023-10-10 Math teachers know the first step to meaningful mathematics discussions is to ask students to share how they solved a problem and make their thinking visible however knowing where to go next can be a daunting task In Intentional Talk How to Structure and Lead Productive Mathematical Discussions authors Elham Kazemi and Allison Hintz provide teachers with a framework for planning and facilitating purposeful math talks that move group discussions to the next level while achieving a mathematical goal Through detailed vignettes from both primary and upper elementary classrooms the authors provide a window into how teachers lead discussions and make important pedagogical decisions along the way By creating equitable opportunities to share ideas teachers can orient students to one another while enforcing that all students are sense makers and their ideas are valued

They examine students roles as both listeners and talkers offering numerous strategies for improving student participation

Intentional Talk includes a collection of lesson planning templates in the appendix to help teachers apply the right structure to discussions in their own classrooms

**Low Attainers in Primary Mathematics** Jenny Houssart,2013-04-15 In this fascinating book Jenny Houssart draws on close observations with children in lower mathematics sets in primary schools to investigate why some children opt out of mathematics at an early age After introducing us to the children she addresses a particular type of mathematical task in each chapter including mental work practical work written work calculators and computers assessment tasks Through the use of stories and quotes the author shows how the children respond to specific tasks and presents evidence of a range of difficulties that emerge as the children are working Each chapter ends with discussions and implications for classroom practice Low Attainers in Primary Mathematics will be a useful resource for primary teachers student teachers SENCOs and teaching assistants who will all recognise these children from their own classrooms and draw insights from this highly readable book

**Talk Box** Lyn Dawes,Claire Sams,2017-06-14 Talk Box supports teachers implementing the new curriculum who are looking for fresh ideas with a focus on teaching talk skills encouraging discussion and developing articulate children It sets out different types of teaching involving children learning collaboratively through discussion with peers and centres on step by step lesson plans to develop hidden potential across the entire classroom At the heart of the lesson plans is the talk box a collection of interesting objects which provide a focus for class discussion and where the activities are based on these linked ideas Young children need their teachers to help them make sense of the world The most effective medium for explaining discussing describing with children is talk Children learn very well from one another when taught how to do so and are a good resource for one another in the classroom Children may be able to talk but they are not often aware what sort of talk can help them to get the best from their education Direct teaching of essential talk skills and understanding is straightforward and should be undertaken in school classrooms The numerous lesson plans included in this book are each built around specific learning objectives for speaking and listening and cover subjects such as literacy numeracy science citizenship ICT and Computing Each lesson includes a resources list and photocopiable worksheets and range from whole class to small group work This book will help you teach children to engage in the educationally effective kind of discussion known as Exploratory Talk where everyone s viewpoint is considered opinions are justified with reasons and decisions are made together This new edition includes updated curriculum links new research findings a home school link section and contain additional EAL and SEN materials

**Children's Mathematical Thinking in Primary Years** Julia Anghileri,2005-05-01 This popular Continuum series intended chiefly for teachers and

trainee teachers places strong emphasis on practice but at the same time incorporates the latest research in the field The book demonstrates a strong belief in the ability of children to learn and in the ability of teachers to increase children's learning potential The series authors are distinguished practitioners in their fields who write with authority but without jargon With the increasingly popular constructivist framework for learning teachers are coming to recognize the limitations of taught procedures and to find ways to encourage children to generate their own knowledge and understanding in mathematics The challenge for teachers is to promote an environment that encourages mathematical thinking in which pupils of all abilities are able to achieve their full potential This text brings together experiences of teachers and researchers who examine the ways children work mathematically in order to provide an enhanced learning environment within the classroom It also addresses key issues in current maths teaching

*Language for Learning Mathematics: Assessment for Learning in Practice* Clare Lee, 2006-06-16 Assessment for learning is a powerful way to raise standards and improve learning However as this book shows effective assessment for learning in the mathematics classroom depends on pupils being able and willing to use mathematical language to express their ideas When discussion negotiation and explanation are encouraged teachers use assessment for learning creatively the work quickly becomes more challenging and the pupils come to see themselves as successful learners Many pupils find it difficult to express ideas in mathematics because of problems with the language that is used to convey mathematical concepts This book shows teachers how to help pupils express what they really know and understand so that assessment for learning can be used The book Discusses what mathematical language is and what it is not Suggests practical approaches to introducing more discourse into the classroom Explores the ideas of assessment for learning rich questioning and dialogue effective feedback and peer and self assessment and suggests how these can be used effectively in mathematics classrooms to improve learning Language for Learning Mathematics is key reading for teachers and trainee teachers in mathematics as well as assessment advisors at LAs
