discussed than was possible in the limited lecture time available At this meeting the major interest of the participants concerned the theoretical investigation of squeezed states of the radiation field and the very recently reported experimental observations of such states Other related areas of work reported here include bistability and chaotic behaviour of optical systems the quantum theory of measurements optical tests of general relativity and the current technological limitations governing the stabilization of lasers The editors would like to thank the participants for providing detailed notes for publication shortly after the meeting and the various organisations that have provided financial support
