Maths P5 Step-by-Step Maths Yeap, 2005-12 **First Steps for Math Olympians: Using the American Mathematics Competitions** J. Douglas Faires, 2020-10-26

Any high school student preparing for the American Mathematics Competitions should get their hands on a copy of this book. A major aspect of mathematical training and its benefit to society is the ability to use logic to solve problems. The American Mathematics Competitions (AMC) have been given for more than fifty years to millions of high school students. This book considers the basic ideas behind the solutions to the majority of these problems and presents examples and exercises from past exams to illustrate the concepts. Anyone taking the AMC exams or helping students prepare for them will find many useful ideas here. But people generally interested in logical problem solving should also find the problems and their solutions interesting. This book will promote interest in mathematics by providing students with the tools to attack problems that occur on mathematical problem solving exams and specifically to level the playing field for those who do not have access to the enrichment programs that are common at the top academic high schools. The book can be used either for self study or to give people who want to help students prepare for mathematics exams easy access to topic oriented material and samples of problems based on that material. This is useful for teachers who want to hold special sessions for students but it is equally valuable for parents who have children with mathematical interest and ability. As students' problem solving abilities improve they will be able to comprehend more difficult concepts requiring greater mathematical ingenuity. They will be taking their first steps towards becoming math Olympians.

Introduction to the Mathematics of Money David Lovelock, Marilou Mendel, Arthur L. Wright, 2007-04-05 Introduction Some
 people distinguish between savings and investments where savings are monies placed in relatively risk free accounts with

modest rewards and where investments involve more risk and the potential for greater rewards In this book we do not distinguish between these ideas We treat them both under the umbrella of investing In general income falls into two categories earned income which is the income derived from your everyday job and unearned income which is income derived from investing You attend college to strengthen your prospects for earned income so why do you need to worry about unearned income namely investment income There are many reasons to invest and to learn about investing Perhaps the primary one is to take charge of your own financial future You need money for short term goals such as living expenses emergencies and for long term goals such as buying a car buying a house educating children paying catastrophic medical bills funding retirement Investing involves borrowing and lending and buying and selling borrowing and lending When you put money into a bank savings account you are lending your money and the bank is borrowing it You can lend money to a bank a business a government or a person In exchange for this the borrower promises to pay you interest and to return your initial investment at a future date Why would the borrower do this Because the borrower anticipates using this money in a way that earns more than the interest promised to you Examples of borrowing and lending are savings accounts certificates of deposits money market accounts and bonds
