Systems Analysis by Graphs and Matroids Kazuo Murota, 1987 Systems Analysis by Graphs and Matroids Kazuo Murota, 2012-12-06 Recent technology involves large scale physical or engineering systems consisting of thousands of interconnected elementary units This monograph illustrates how engineering problems can be solved using the recent results of combinatorial mathematics through appropriate mathematical modeling The structural solvability of a system of linear or nonlinear equations as well as the structural controllability of a linear time invariant dynamical system are treated by means of graphs and matroids Special emphasis is laid on the importance of relevant physical observations to successful mathematical modelings The reader will become acquainted with the concepts of matroid theory and its corresponding matroid theoretical approach This book is of interest to graduate students and researchers

Topics in Matroid Theory Leonidas S. Pitsoulis, 2013-10-24 Topics in Matroid Theory provides a brief introduction to matroid theory with an emphasis on algorithmic consequences Matroid theory is at the heart of combinatorial optimization and has attracted various pioneers such as Edmonds Tutte Cunningham and Lawler among others Matroid theory encompasses matrices graphs and other combinatorial entities under a common solid algebraic framework thereby providing the analytical tools to

solve related difficult algorithmic problems The monograph contains a rigorous axiomatic definition of matroids along with other necessary concepts such as duality minors connectivity and representability as demonstrated in matrices graphs and transversals The author also presents a deep decomposition result in matroid theory that provides a structural characterization of graphic matroids and show how this can be extended to signed graphic matroids as well as the immediate algorithmic consequences Integer Programming and Combinatorial Optimization Oktay Günlük, Gerhard J.

Woeginger, 2011-06-21 This book constitutes the proceedings of the 15th International Conference on Integer Programming and Combinatorial Optimization IPCO 2011 held in New York USA in June 2011 The 33 papers presented were carefully reviewed and selected from 110 submissions The conference is a forum for researchers and practitioners working on various aspects of integer programming and combinatorial optimization with the aim to present recent developments in theory computation and applications The scope of IPCO is viewed in a broad sense to include algorithmic and structural results in integer programming and combinatorial optimization as well as revealing computational studies and novel applications of discrete optimization to practical problems **Discrete Convex Analysis** Kazuo Murota, 2003-01-01 Discrete Convex

Analysis is a novel paradigm for discrete optimization that combines the ideas in continuous optimization convex analysis and combinatorial optimization matroid submodular function theory to establish a unified theoretical framework for nonlinear discrete optimization The study of this theory is expanding with the development of efficient algorithms and applications to a number of diverse disciplines like matrix theory operations research and economics This self contained book is designed to provide a novel insight into optimization on discrete structures and should reveal unexpected links among different disciplines It is the first and only English language monograph on the theory and applications of discrete convex analysis Discrete Convex Analysis provides the information that professionals in optimization will need to catch up with this new theoretical development It also presents an unexpected connection between matroid theory and mathematical economics and expounds a deeper connection between matrices and matroids than most standard textbooks **Theory and Applications**

of Models of Computation Jianer Chen, Qilong Feng, Jinhui Xu, 2020-10-11 This book constitutes the refereed proceedings of the 16th Annual Conference on Theory and Applications of Models of Computation TAMC 2020 held in Changsha China in October 2020 The 37 full papers were carefully reviewed and selected from 83 submissions The main themes of the selected papers are computability complexity algorithms information theory and their extensions to machine learning theory and foundations of artificial intelligence **Theory and Practice of Gearing and Transmissions** Veniamin Goldfarb, Natalya

Barmina, 2015-08-26 This book brings together papers from all spheres of mechanical engineering related to gears and transmissions from fundamentals to advanced applications from academic results in numerical and experimental research to new approaches to gear design and aspects of their optimization synthesis and to the latest developments in manufacturing Furthermore this volume honours the work of Faydor L Litvin on the 100th anniversary of this birth He is acknowledged as
