Organization Of Length And Class Empirical Consequences Of A Piagetian Formalism:

Logical Abilities in Children: Volume 1 Daniel N. Osherson, 2017-08-08 Originally published in 1974 a wide and interesting set of intellectual abilities in children are examined here Volume 1 of 4 Organization of Length and Class Concepts Empirical Consequences of a Piagetian Formalism converts an axiomatization of classes and asymmetrical relationships proper to Piaget's discipline of Genetic Epistemology into a model of the development of these notions in children Here may be one of the only attempts to derive predictive consequences from the more philosophically oriented writings of the Geneva School **Event Theory** Irene Fast, Robert E. Erard, Carol J. Fitzpatrick, Anne E. Thompson, Linda Young, 2013-12-19 First published in 1985 The event model presented in this study attempts a framework for integrating psychoanalytic and Piagetian psychologies centered in the notion that development occurs by the differentiation of self and nonself Its aim is to understand phenomena conceptualized in psychoanalytic terms in a model based on this Piagetian perspective or in other words to provide an object relational model for the development of psychic structure analytic and Piagetian psychologies centered in the notion that development occurs by the differentiation of self and nonself The Nature of Thought P. W. Jusczyk, R. M. Klein, 2014-05-22 First published in 1980 This is a collection of lectures around Professor Emeritus Don O. Hebb of Dalhousie University on the major trends in cognitive psychology It includes essays on Hebb's ideas and impact on current psychological theorizing his structure of thought and a collection under the section of Information Processing Analysis Logical Abilities in Children: Volume 3 Daniel N. Osherson, 2017-08-24 Originally published in 1975 this volume 3 of 4 presents an expanded model of certain deductive abilities in children and adults A partial explanation of the growth of these abilities was suggested in Volume 2 of this series and it is amplified here both with regard to propositional logic and the logic of class inclusion A new methodology is employed the issue of the effect of content in deductive reasoning is covered and developmental questions are reformulated Although only data from experiments with adolescents are presented here the volume sets the stage for potentially illustrating developmental comparisons a topic pursued in Volume 4 of this novel and inventive series **Habitats for Children** Joachim F. Wohlwill, Willem VanVliet, 2013-08-21 First published in 1985 Much has been written from the diverse perspectives of the economist the sociologist the designer and planner and others about the pros and cons of different patterns of housing and settlement for our population This volume was generated from when in the spring of 1980 a study group was formed sponsored by the Society for Research in Child Development with support from the Foundation for Child Development to examine a particular aspect of this topic namely the ways in which and the extent to which different density levels in our residential environment affect the development of children **Development During Middle Childhood** Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Child Development Research and Public Policy, Panel to Review the Status of Basic Research on School-Age Children, 1984-01-01 For the first time a report

focuses specifically on middle childhood a discrete pivotal period of development In this review of research experts examine the physical health and cognitive development of 6 to 12 year old children as well as their surroundings school and home environment ecocultural setting and family and peer relationships *Second Language Acquisition in Childhood* B. McLaughlin, 2013-10-28 First published in 1987 Throughout human history learning a second language has been an important part of the educational process From ancient times to the present school children have had to struggle to learn a second language and in many cases third and fourth languages To be educated meant to know a language other than the language of one's family and community The contemporary American educational system is one of the few in recorded history that allows its products to remain monolingual **Beginnings** Margaret B. Spencer, Geraldine K. Brookins, Walter R. Allen, 2013-04-15 How does the therapist begin psychotherapy How that is does she conceptualize the needs of the patient while simultaneously enlisting him or her as an active partner in formulating an individualized working plan And how should supervisors teach the skills needed to make the intake procedure truly the beginning of treatment In *Beginnings The Art and Science of Planning Psychotherapy* Mary Jo Peebles Kleiger tackles these and other questions in an authoritative manner that draws on the cumulative experience of the outpatient department of the Menninger Psychiatric Clinic Peebles Kleiger outlines an approach that gives equal weight to the need for a diagnostic case formulation with specific treatment recommendations and the need to make the patient an active partner in the process right from the start Clinicians of every persuasion will appreciate her sensitive discerning grasp of the dyadic interaction of the initial sessions when the therapist must refine preliminary hypotheses and simultaneously engage the patient in a process of discovery and self reflection that lays the groundwork for the therapeutic alliance Peebles Kleiger's elegant synoptic discussions of the major categories of psychological dysfunction and the different treatment strategies appropriate to them are carefully calibrated with actual examples to the limits and opportunities of the first sessions Of particular value is her unusual capacity to articulate patients various difficulties in forming and maintaining an alliance and then to show how such difficulties feed back into the clinician's interventions in the first few sessions In this manner she illustrates how potential treatment obstacles difficulties in affect regulation in reality testing in conscience formation among others can be assessed and subjected to trial interventions from the very start Skilled in various psychodynamic and behavioral approaches from psychoanalysis to hypnotherapy Peebles Kleiger consistently advances an integrative approach that cuts across specific modalities and combines sophisticated psychodynamic understanding with the fruits of empirical research Both primer and sourcebook *Beginnings The Art and Science of Planning Psychotherapy* fills a niche in the literature so admirably that clinicians will find it indispensable in planning humanely responsive treatment in an increasingly complex therapeutic world **Foundations for A Psychology of Education** Alan M. Lesgold, Robert Glaser, 2012-11-12 The chapters in this collection illustrate how current concepts and principles from various disciplines can be viewed from the perspective of their value to educational process thinking While

not providing specific prescriptions for educational problems the articles provide relevant experimental and theoretical knowledge has accumulated in many fields including learning theory cognitive development motivation and intellectual abilities and attitudes *Children's Understanding* Graeme S. Halford, 2014-02-25 This work argues that cognitive development is experience driven and processes entailed in acquiring information about the world are analyzed based on recent models of learning and induction The way information is represented and accessed when performing cognitive tasks is considered paying particular attention to the implications of Parallel Distributed Processing PDP models for cognitive development The first half of the book contains analyses of human reasoning processes drawing on PDP models of analogy development of strategies and task complexity all based on aspects of PDP representations It is proposed that PDP representations become more differentiated with age so more vectors can be processed in parallel with the result that structures of greater complexity can be processed This model gives an account of previously unexplained difficulties in children's reasoning including some which were influential in stage theories The second half of the book examines processes entailed in some representative cognitive developmental tasks including transitive inference deductive inference categorical syllogisms hypothesis testing learning set acquisition acquisition and transfer of relational structures humor hierarchical classification and inclusion understanding of quantity arithmetic word problems algebra conservation mechanics and the concept of mind Process accounts of tasks are emphasized based on applications of recent developments in cognitive science

Spatial Cognition D. R. Olson, E. Bialystok, 2014-03-18 First published in 1983 This is a volume in a series on Child Psychology This book offers a set of theoretical ideas which make up a quite general theory of the mental representation of space which accounts both for much of spatial perception but also much of spatial thought The system is general and economical and can be readily applied to novel problems as we illustrated in regard to Piaget's water level problem and Koller's letter recognition problem **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1974

First multi year cumulation covers six years 1965-70 Logical Abilities in Children: Volume 2 Daniel N. Osherson, 2017-08-24 Originally published in 1974 the second volume of four Logical Inference Underlying Operations provides a process model for the solution of certain syllogistic reasoning problems Testable predictions of the model are easily derived and the available evidence supports the model's description of the real time mental steps mediating these logical abilities A theory of development connected to the model makes these volumes all the more important for cognitive developmental and educational psychologists as well as educators and linguists **Logical Abilities in Children: Volume 4** Daniel N. Osherson, 2017-08-14 Originally published in 1976 this fourth and final volume in a series that met with critical acclaim is concerned with a certain kind of answer to the question What distinguishes the concepts that are a natural part of human languages from those that are merely expressible in language The kind of answers contemplated rely on formal properties of the logics that overlay the two sorts of concepts The author presents a substantive theory of natural concepts

which helps to make concrete the methodological proposals In order to make the theory more manageable it is restricted to sentential modifiers expressed in English Although these proposals are substantive the methodology they exemplify may be of even more significance Some of the ideas in the author s approach derive from the work of Chomsky and several issues relevant to the growth of logical thinking are also treated with data that speak to questions raised in Volume 3 concerning qualitative change through development This final volume in the series will be essential reading for all concerned with both logical abilities in children their development and novel methodological approaches to research bearing on this and related issues

Language Development: Syntax and semantics Stan A. Kuczaj,1982 First published in 1981 Routledge is an imprint of Taylor Francis an informa company

Logical Abilities in Children Daniel N. Osherson,2021-02-25 Logical Abilities in Children 4 Volume set was originally published between 1974 and 1976 to critical acclaim Now available again as individual titles or a set of 4 the author draws on Piagetian theory to examine logical ability in children through to adolescence The set will be interesting reading for all concerned with both logical abilities in children their development and novel methodological approaches to research bearing on this and related issues at the time
