Architecture and the Beaux-Arts Jeffrey W. Cody, Nancy Shatzman Steinhardt, Tony Atkin, 2011-01-31 In the early twentieth century Chinese traditional architecture and the French derived methods of the *cole des Beaux Arts* converged in the United States when Chinese students were given scholarships to train as architects at American universities whose design curricula were dominated by Beaux Arts methods Upon their return home in the 1920s and 1930s these graduates began to practice architecture and create China's first architectural schools often transferring a version of what they had learned in the U S to Chinese situations The resulting complex series of design related transplantations had major implications for China between 1911 and 1949 as it simultaneously underwent cataclysmic social economic and political changes After 1949 and the founding of the People's Republic China experienced a radically different wave of influence from the Beaux Arts through advisors from the Soviet Union who first under Stalin and later Khrushchev brought Beaux Arts ideals in the guise of socialist progress In the early twenty first century China is still feeling the effects of these events Chinese Architecture and the Beaux Arts examines the coalescing of the two major architectural systems placing significant shifts in architectural theory and practice in China within relevant contemporary cultural and educational contexts Fifteen major scholars from around the world analyze and synthesize these crucial events to shed light on the dramatic architectural and urban changes occurring in China today many of which have global ramifications This stimulating and generously

illustrated work is divided into three sections framed by an introduction and a postscript The first focuses on the convergence of Chinese architecture and the *cole des Beaux Arts* outlining the salient aspects of each and suggesting how and why the two met in the U S The second section centers on the question of how Chinese architects were influenced by the Beaux Arts and how Chinese architecture was changed as a result The third takes an even closer look at the Beaux Arts influence addressing how innovative practices new schools of architecture and buildings whose designs were linked to Beaux Arts assumptions led to distinctive new paradigms that were rooted in a changing China By virtue of its scope scale and scholarship this volume promises to become a classic in the fields of Chinese and Western architectural history Contributors Tony Atkin Peter J Carroll Yung Ho Chang Jeffrey W Cody Kerry Sizheng Fan Fu Chao Ching Gu Daqing Seng Kuan Delin Lai Xing Ruan Joseph Rykwert Nancy S Steinhardt David VanZanten Rudolf Wagner Zhang Jie Zhao Chen **Routledge**

Handbook of Chinese Architecture Jianfei Zhu, Chen Wei, Li Hua, 2022-11-30 This handbook representing the collaboration of 40 scholars provides a multi faceted exploration of roughly 6 000 years of Chinese architecture from ancient times to the present This volume combines a broad spectrum approach with a thematic framework for investigating Chinese architecture integrating previously fragmented topics and combining the scholarship of all major periods of Chinese history By organizing its approach into five parts this handbook Traces the practices and traditions of ancient China from imperial authority to folk culture Unveils a rich picture of early modern and republican China revealing that modernization was already beginning to emerge Describes the social intellectual ideological and formal enterprises of socialist architecture Frames a window on a complex and changing contemporary China by focusing on autonomy state practices and geopolitics of design ultimately identifying its still evolving position on the world stage Examines the existing cultural and political theories to highlight potential avenues for future transformations in Chinese architecture that also retain Chinese identity Providing a pioneering combination of ancient and modern Chinese architecture in one coherent study this book is a must read for scholars students and educators of Chinese architecture architectural history and theory and the architecture of Asia *Chang'an Avenue and the Modernization of Chinese Architecture* Shuishan Yu, 2013-05-15 In this interdisciplinary narrative the never ending completion of China s most important street offers a broad view of the relationship between art and ideology in modern China Chang an Avenue named after China s ancient capital whose name means Eternal Peace is supremely symbolic Running east west through the centuries old heart of Beijing it intersects the powerful north south axis that links the traditional centers of political and spiritual legitimacy the imperial Forbidden City and the Temple of Heaven Among its best known features are Tiananmen Square and the Great Hall of the People as well as numerous other monuments and prominent political cultural financial and travel related institutions Drawing on Chang an Avenue s historic ties and modern transformations this study explores the deep structure of the Chinese modernization project providing both a big picture of Beijing s urban texture alteration and details in the design process of individual buildings Political winds shift architectural

styles change and technological innovations influence waves of demolition and reconstruction in this analysis of Chang'an Avenue's metamorphosis. During collective design processes, architects, urban planners, and politicians argue about form, function, and theory, and about Chinese vs. Western and traditional vs. modern style. Every decision is fraught with political significance, from the 1950s debate over whether Tiananmen Square should be open or partially closed to the 1970s discussion of the proper location, scale, and design of the Mao Memorial Mausoleum to the more recent controversy over whether the egg-shaped National Theater designed by the French architect Paul Andreu is an affront to Chinese national pride. Between the fall of the Han dynasty in 220 CE and the year 600, more than thirty dynasties, kingdoms, and states rose and fell on the eastern side of the Asian continent. The founders and rulers of those polities represented the spectrum of peoples in North East and Central Asia. Nearly all of them built palaces, altars, temples, tombs, and cities, and almost without exception, the architecture was grounded in the building tradition of China. Illustrated with more than 475 color and black and white photographs, maps, and drawings, *Chinese Architecture in an Age of Turmoil* uses all available evidence—Chinese texts, secondary literature, excavation reports, and most important, physical remains—to present the architectural history of this tumultuous period in China's history. Its author, Nancy Shatzman Steinhardt, arguably North America's leading scholar of premodern Chinese architecture, has done field research at nearly every site mentioned, many of which were unknown twenty years ago and have never been described in a Western language. The physical remains are a handful of pagodas, dozens of cave temples, thousands of tombs, small-scale evidence of architecture such as sarcophagi, and countless representations of buildings in paint and relief sculpture. Together, they narrate an expansive architectural history that offers the first in-depth study of the development, century by century, of Chinese architecture of third through the sixth centuries, plus a view of important buildings from the two hundred years before the third century and the resolution of architecture of this period in later construction. The subtext of this history is an examination of Chinese architecture that answers fundamental questions such as: What was achieved by a building system of standardized components? Why has this building tradition of perishable materials endured so long in China? Why did it have so much appeal to non-Chinese empire builders? Does contemporary architecture of Korea and Japan enhance our understanding of Chinese construction? How much of a role did Buddhism play in construction during the period under study? In answering these questions, the book focuses on the relation between cities and monuments and their heroic or powerful patrons, among them Cao Cao, Shi Hu, Empress Dowager Hu, Gao Huan, and lesser-known individuals. Specific and uniquely Chinese aspects of architecture are explained. The relevance of sweeping and sometimes uncomfortable concepts relevant to the Chinese architectural tradition, such as colonialism, diffusionism, and the role of historical memory, also resonate through the book. **Chinese Architecture** Yanxin Cai, 2011-03-03. provides an illustrated introduction to Chinese architecture a reference for modern design and a window into China's history

Constructing the Colonized Land Izumi Kuroishi, 2016-05-23 Despite the precipitous rise of East Asia as a center of architectural production since the Second World War informed studies remain lacking The lacuna is particularly conspicuous in terms of regional cross national studies documenting the close ties and parallels between China Taiwan Japan and Korea during this period Examining colonized cities in East Asia this book brings together a range of different perspectives across both space and time European Chinese Taiwanese Korean and Japanese discourses are examined with a range of complementary and conflicting views on the design of urban and architectural forms the political institutional religious and economical contexts of urban planning the role played by various media and the influence of various geographical social and anthropological research methods The diversity and plurality of these perspectives in this book provides an entwined architectural urban and social history of East Asia which offers insights into the cultural systems and the historical and spatial meanings of these colonized cities It concludes that the difficulties in the historical study of East Asia's colonial cities do not so much indicate cultural difference as the potentiality for multiple readings of the past toward the future

Architecture and Identity Peter Herrle, Erik Wegerhoff, 2008 This book brings together complex fields of knowledge and globally splintered discourses on a subject that is experienced not only by scholars but in the everyday lives of people around the world There is a common complaint about the loss of identity which to a substantial degree is being associated with the built environment in cities and specifically with their architecture Architecture and Identity takes a global multidisciplinary look on how identities in contemporary architecture are constructed The general hypothesis underlying this book is that in a globalized world identity in architecture cannot be easily derived from distinct indigenous patterns The book presents forty contributions from various disciplines aiming to destroy the myth of an inheritable or otherwise prefabricated identity Some authors dismantle constructs of identity that have long been considered as solid and unbreakable while others meticulously unravel the construction process of identities in
