Conceptual Issues in Modern Human Origins Research Geoffrey A. Clark, Catherine M. Willermet, While those who study

human origins now agree that the evolution of modern human form extends back much further in time than the evolution of modern human behavior they disagree sharply as to how to interpret the substantive data Two fundamentally incommensurate interpretations of our origins the Replacement camp and the Continuity camp have now emerged out of pre existing models and theories that go back to the last quarter of the 19th century This book contends that these positions are based on radically different biases and assumptions about what the remote human past was like The purpose of this volume is to examine those conceptual differences not to arrive at a consensus but rather to explore the reasons why a consensus might never be possible

Human Biology Daniel D. Chiras, 2005 Intended for non majors this textbook describes the structure and functions of each human body system explores the body processes that regulate chemical levels in the blood and body temperature and overviews genetics human reproduction and evolution The fifth edition trims the overall length by 20% while adding short essays on past scientific

The Evolution of Modern Humans in Africa Pamela R. Willoughby, 2007 Pamela Willoughby provides a wide ranging synthesis of current knowledge about the evolution of fully modern humans in Africa during the Middle Palaeolithic Middle Stone Age According to most scholars our modern ancestors first emerged in Africa and then spread throughout the habitable world Willoughby brings evidence from mitochondrial DNA ancient fossils and archaeological remains including her own research in Tanzania to bear on questions regarding the place of human species in nature the specific origins of Homo Sapiens and the dispersal of these modern humans throughout Africa and around the globe She confronts straightforwardly the problems of dating the earliest modern humans and she discusses the various alternative models of modern human origins which will be debated for years to come The Evolution of Modern Humans in Africa is a compelling thought provoking book for both students and scholars

Women in Human Evolution Lori D. Hager, 1997 This volume the first of its kind examines the role of women paleontologists and archaeologists in a field traditionally dominated by men Women researchers in this field have questioned many of the assumptions and developmental scenarios advanced by male scientists As a result of such efforts women have forged a more central role in models of human development and have radically altered the way in which human evolution is perceived This history of the feminist critique of science is of profound significance and will be of interest to all those who work in the fields of anthropology archaeology paleontology and human biology

Understanding Human Evolution Jeffrey K. McKee, Frank E. Poirier, W Scott Mcgraw, 2015-10-16 For the one term course in human evolution paleoanthropology or fossil hominins taught at the junior senior level in departments of anthropology or biology This new edition provides a comprehensive overview to the field of paleoanthropology the study of human evolution by analyzing fossil remains It includes the latest fossil finds attempts to place humans into the context of geological and biological change on the planet and presents current controversies in an even handed manner

The Origins of Human Society Peter Bogucki, 2000-01-04 The Origins of Human Society traces the development of human culture from its origins over 2 million years ago to the emergence of literate civilization In

addition to a global coverage of prehistoric life the book pays specific attention to the origins and dispersal of anatomically modern humans the development of symbolic expression the transition from mobile foraging bands to sedentary households early agriculture and its consequences the emergence of social differentiation and hereditary ranking and the prehistoric roots of ancient states and empires The Blackwell History of the World Series The goal of this ambitious series is to provide an accessible source of knowledge about the entire human past for every curious person in every part of the world It will comprise some two dozen volumes of which some provide synoptic views of the history of particular regions while others consider the world as a whole during a particular period of time The volumes are narrative in form giving balanced attention to social and cultural history in the broadest sense as well as to institutional development and political change Each provides a systematic account of a very large subject but they are also both imaginative and interpretative The Series is intended to be accessible to the widest possible readership and the accessibility of its volumes is matched by the style of presentation and production

Quirks of Human Anatomy Lewis I. Held, Jr, 2009-05-29 With the emergence of the new field of evolutionary developmental biology we are witnessing a renaissance of Darwin's insights 150 years after his *On the Origin of Species* Thus far the exciting findings from evo devo have only been trickling into college courses and into the domain of non specialists With its focus on the human organism *Quirks of Human Anatomy* opens the floodgates by stating the arguments of evo devo in plain English and by offering a cornucopia of interesting case studies and examples Its didactic value is enhanced by 24 schematic diagrams that integrate a host of disparate observations by its Socratic question and answer format and by its unprecedented compilation of the literature By framing the hows of development in terms of the whys of evolution it lets readers probe the deepest questions of biology Readers will find the book educational and enjoyable as it revels in the fun of scientific exploration

IntroBooks,2018-02-21 Human evolution can be considered to be a lengthy procedure of several transformations in which the people originated from the ape like ancestors There are several scientific evidence that reveals that the behavioral and the physical traits that are shared by all the organisms have originated from the ape like ancestors They have evolved across lengthy periods of approximately six million years ago One of the earliest human traits that have defined the human evolution bipedalism is the ability for walking on two legs have evolved over four million years ago There are several other human characteristics including the complex and human brains the ability to make several innovative tools along with the complex symbolic representation and elaborative cultural diversity have emerged mainly during the past several millions of years

The Truth about Human Origins Brad Harrub,Bert Thompson,2003 Ever since Charles Darwin first published The Origin of Species on November 24 1859 the subject of origins has been one of the most controversial topics around Sadly it also is a subject that is fraught with erroneous theories and concepts Most students today are taught that organic evolution is not a theory but a fact that all reputable scientists accept Disclaimers from the evolutionary community notwithstanding such a claim is quite simply wrong We believe it is time for someone to offer what renowned news commentator Paul Harvey would call the rest of the story That is what The Truth About Human Origins does It tells the rest of the story as it discusses the scientific facts about mankind s beginning For example it investigates the record of the rocks as that record relates to human evolution It demonstrates how evolutionary theory is unable to explain things like the origin of gender and sexual reproduction the origin of language and communication the origin of the brain the mind and human consciousness and the origin of skin colors and blood types It also examines in an in depth fashion the so called molecular evidence of human evolution Human Paleontology and Prehistory Assaf Marom,Erella Hovers,2017-01-24 The aim of the book is to present

original and though provoking essays in human paleontology and prehistory which are at the forefront of human evolutionary research in honor of Professor Yoel Rak a leading scholar in paleoanthropology The volume presents a collection of original papers contributed by many of Yoel s friends and colleagues from all over the globe Contributions from experts around the globe fall roughly into three broad categories Reflections on some of the broad theoretical questions of evolution and especially about human evolution the early hominins with special emphasis on Australopithecus afarensis and Paranthropus and the Neanderthals that contentious group of our closest extinct relatives Within and across these categories nearly every paper addresses combinations of methodological analytical and theoretical questions that are pertinent to the whole human evolutionary time span This book will appeal most to scholars and advanced students in paleoanthropology human
