

Protostar looks like a star, but its core is not yet hot enough for nuclear fusion.

Main sequence stars fuse hydrogen atoms to helium atoms in their cores.

As the Large Red Giant condenses, it heats up even further, burning the last of its hydrogen and causing the star's outer layers to expand further.

A Supernova can be triggered

1. by the sudden re-ignition of nuclear fusion in a degenerate star.
2. by the gravitational collapse of the core of a massive star.

Protons and electrons left after a supernova are forced to combine, to produce a very dense neutron star.

If the mass is significantly greater, the gravity will be so strong that the neutron star will shrink further to become a black hole.

White Dwarf

A white Dwarf becomes a black dwarf when it stops emitting light.

A Red Giant is formed when a star runs out of hydrogen at its core and starts fusing hydrogen into helium outside the core, releasing energy and expanding the star.

Large Red Giants are hot enough to turn the helium at their core into heavy elements like carbon.

Once the star runs out of fuel, it collapses under gravity, and the outer layers are ejected into the vastness of space.

The remains of the star are devoid of fuel. They consist of degenerate matter with a very high density.

Origin And Evolution Of Neutron Stars:

The Origin and Evolution of Neutron Stars International Astronomical Union. Symposium, 1987-06-30 Proceedings of the 125th Symposium of the International Astronomical Union held in Nanjing China May 26 30 1986 **The Origin and Evolution of Neutron Stars** International Astronomical Union. Symposium, 1987 **The Origin and Evolution of Neutron Stars** D.J. Helfand, J.-H. Huang, 1987-07-14 The publication of this volume coincides with the 55th anniversary of the discovery of the neutron and Landau's suggestion at the time that one could make stars out of the new particles This year also marks the twenty fifth anniversary of the detection of Sco X-1 the first known X-ray binary system and follows by just twenty years Jocelyn Bell Burnell's discovery of that little bit of scruff on her chart record that led to the recognition of radio pulsars As Q. Y. Qu President of Nanjing University noted in his welcoming address however Chinese astronomers have been observing the consequences of neutron star formation for several millennia It was appropriate then that this Symposium the first International Astronomical Union meeting ever to be held in the Peoples Republic of China be devoted to the topic of neutron stars IAU Symposium Number 125 The Origin and Evolution of Neutron Stars was convened on the morning of May 26 1986 at Nanjing University Nanjing Peoples Republic of China One hundred and thirty nine participants from fifteen countries including over eighty five scientists who were visiting China for the first time met each day for the following week to discuss where neutron stars come from how they evolve and where they go The meeting was judged by unanimous acclaim of the participants to be a scientific cultural and culinary success Literature 1987, Part 2 U. Polidan,1992-06-30 This book contains the proceedings of IAU Symposium No 151 Evolutionary Processes in Interacting Binary Stars which was held from 5 to 9 August 1991 in Cordoba Argentina The primary aim of this conference was to review and evaluate our current understanding of the evolutionary processes in wide variety of interacting binary stars from their births to their deaths Subjects included the formation of binaries mass flow and transfer accretion processes and binaries with collapsed components such as novae X ray binaries and binary pulsars As the field covered is both broad and diverse there were in all thirty seven invited talks sixty two contributed papers were also presented In addition these proceedings contain comments from a panel discussion of the major unsolved problems of interacting binary stars

Rotation and Accretion Powered Pulsars Pranab Ghosh,2007 This book is an introduction to pulsars a key area in high energy astrophysics with continuing potential for fundamental discoveries Throughout the book runs the unifying thread of the evolutionary link between rotation powered pulsars and accretion powered pulsars OCo a milestone of modern astrophysics Early textbooks on pulsars dealt almost entirely with rotation powered ones while accounts of pulsars in volumes on X ray binaries focused almost exclusively on accretion powered ones This is the first textbook to treat these two kinds of pulsars simultaneously with equal importance stressing the fact that both are rotating magnetic neutron stars operating under different conditions during different parts of their lives It describes the observational properties of both kinds of pulsars summarizes our physical understanding of these properties and pays detailed attention to the physics of superdense matter which neutron stars are composed of as well as to the superfluidity which is expected to occur in neutron stars Evolution from rotation power to accretion power and vice versa are carefully described The effects of the strong magnetic fields of neutron stars on themselves their emission properties and their environments are discussed as are the origin and evolution of such magnetic fields Also treated is the superbly accurate verification of Einstein s theory of general relativity through timing studies of binary pulsars which led to the award of the Nobel Prize to Hulse and Taylor in 1993 On each topic the book starts with simple basic physical concepts and builds up the exposition to the point where the latest and most exciting developments become accessible to the reader

Pulsars as Physics Laboratories Roger D. Blandford, 1993 The discovery 25 years ago of the remarkable objects which came to be known as pulsars and their identification as neutron stars fulfilled a prediction made more than 30 years earlier Over 550 pulsars are now known almost all detected at radio frequencies Their pulse periods range from 1.5 ms to several seconds Most pulsars are single neutron stars but in an important subset the pulsar is in a binary orbit with a companion star Observations have revealed a wealth of detail about the structure and evolution of pulsars and the pulse emission process giving new insight into the behaviour of matter in the presence of extreme gravitational and electromagnetic fields Pulsars have unique physical properties which make them nearly ideal as probes for a wide range of physical studies
