Origin Of Chondrules And Chondrites:

The Origin of Chondrules and Chondrites Derek W. G. Sears, 2004-12-02 Chondrites are the largest group of meteorites. They can provide unique insights into the origins and early evolution of our Solar System and even into the relationships between our Solar System and other stars in the vicinity of our Sun. The largest structural components of most chondrites are the glass-bearing chondrules, and there are numerous theories for their origin. This clear and systematic text summarizes the ideas surrounding the origin and history of chondrules and chondrites, drawing on research from the various scientific disciplines involved. With citations to a large number of published papers on the topic, it forms a comprehensive bibliography of the key research areas, and extensive illustrations provide a clear visual representation of the scientific theories. This text will be a valuable reference for graduate students and researchers in planetary science, geology, and astronomy.

On the Origin of Chondrules and Chondrites John A. Wood, 1963 Chondrules and Their Origins Elbert A. King, 1983 Chondrule parent materials, chondrule formation, and post-formational history are addressed.

Chondrules Sara S. Russell, Harold C. Connolly Jr., Alexander N. Krot, 2018-07-19 An overview of state-of-the-art research into properties and possible formation mechanisms of chondrules by leading cosmochemists and astrophysicists.

Chondrules and the Protoplanetary Disk R. H. Hewins, Rhian Jones, Edward R. D. Scott, 1996-06-20 This 1996 text reviews current ideas about the formation of chondrules in meteorites.

Scientific and Technical Aerospace Reports, 1995 Lists citations with abstracts for aerospace-related reports obtained from world-wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

Meteorites, Comets, and Planets A.M. Davis, 2005-11-21 Volume 1 provides a broad overview of the chemistry of the solar system. It includes chapters on the origin of the elements and solar system abundances, the solar nebula and planet formation, meteorite classification, the major types of meteorites, important processes in early solar system history, geochemistry of the terrestrial planets, the giant planets and their satellites, comets, and the formation and early differentiation of the Earth. This volume is intended to be the first reference work one would consult to learn about the chemistry of the solar system. Reprinted individual volume from the acclaimed *Treatise on Geochemistry* 10 Volume Set. ISBN 0 08 043751 6 published in 2003.

Meteorites and the Early Solar System II Dante S. Lauretta, Harry Y. McSween, 2006-07-01 They range in size from microscopic particles to masses of many tons. The geologic diversity of asteroids and other rocky bodies of the solar system are displayed in the enormous variety of textures and mineralogies observed in meteorites. The composition, chemistry, and mineralogy of primitive meteorites collectively provide evidence for a wide variety of chemical and physical processes. This book synthesizes our current understanding of the early solar system, summarizing information about processes that occurred before its formation. It will be valuable as a textbook for graduate education in planetary science and as a reference for meteoriticists and researchers in allied fields worldwide.

The Early Earth James Badro, Michael J. Walter, 2015-08-25 *The Early Earth: Accretion and Differentiation* provides a multidisciplinary

overview of the state of the art in understanding the formation and primordial evolution of the Earth The fundamental structure of the Earth as we know it today was inherited from the initial conditions 4 56 billion years ago as a consequence of planetesimal accretion large impacts among planetary objects and planetary scale differentiation The evolution of the Earth from a molten ball of metal and magma to the tectonically active dynamic habitable planet that we know today is unique among the terrestrial planets and understanding the earliest processes that led to Earth's current state is the essence of this volume Important results have emerged from a wide range of disciplines including cosmochemistry geochemistry experimental petrology experimental and theoretical mineral physics and geodynamics The topics in this volume include Condensation of primitive objects in the solar nebula planetary building blocks Early and late accretion and planetary dynamic modeling Primordial differentiation core formation Magma Ocean evolution and crystallization This volume will be a valuable resource for graduate students academics and researchers in the fields of geophysics geochemistry cosmochemistry and planetary science

Workshop on the Origins of Solar Systems Joseph A. Nuth, 1988 Topics addressed include interstellar chemistry and primitive bodies astronomical measurements and nebula models solar nebula models and meteorite and planetary accumulation and evolution

Oxygen in the Solar System Glenn J. MacPherson, 2018-12-17 Volume 68 of Reviews in Mineralogy and Geochemistry reviews Oxygen in the Solar System an element that is so critically important in so many ways to planetary science The book is based on three open workshops Oxygen in the Terrestrial Planets held in Santa Fe NM July 20-23 2004 Oxygen in Asteroids and Meteorites held in Flagstaff AZ June 2-3 2005 and Oxygen in Earliest Solar System Materials and Processes and including the outer planets and comets held in Gatlinburg TN September 19-22 2005 As a consequence of the cross cutting approach the final book spans a wide range of fields relating to oxygen from the stellar nucleosynthesis of oxygen to its occurrence in the interstellar medium to the oxidation and isotopic record preserved in 4 56 Ga grains formed at the Solar System's birth to its abundance and speciation in planets large and small to its role in the petrologic and physical evolution of the terrestrial planets Contents Introduction Oxygen isotopes in the early Solar System A historical perspective Abundance notation and fractionation of light stable isotopes Nucleosynthesis and chemical evolution of oxygen Oxygen in the interstellar medium Oxygen in the Sun Redox conditions in the solar nebula observational experimental and theoretical constraints Oxygen isotopes of chondritic components Mass independent oxygen isotope variation in the solar nebula Oxygen and other volatiles in the giant planets and their satellites Oxygen in comets and interplanetary dust particles Oxygen and asteroids Oxygen isotopes in asteroidal materials Oxygen isotopic composition and chemical correlations in meteorites and the terrestrial planets Record of low temperature alteration in asteroids The oxygen cycle of the terrestrial planets insights into the processing and history of oxygen in surface environments Redox conditions on small bodies the Moon and Mars Terrestrial oxygen isotope variations and their implications for planetary lithospheres Basalts as probes of planetary interior redox state Rheological consequences of redox state

Planetary Materials James J. Papike, 2018-12-17 Volume 36 of Reviews in Mineralogy presents a comprehensive coverage of the mineralogy and petrology of planetary materials The book is organized with an introductory chapter that introduces the reader to the nature of the planetary sample suite and provides some insights into the diverse environments from which they come Chapter 2 on Interplanetary Dust Particles IDPs and Chapter 3 on Chondritic Meteorites deal with the most primitive and unevolved materials we have to work with It is these materials that hold the clues to the nature of the solar nebula and the processes that led to the initial stages of planetary formation Chapter 4 5 and 6 consider samples from evolved asteroids the Moon and Mars respectively Chapter 7 is a brief summary chapter that compares aspects of melt derived minerals from differing planetary environments The History of Meteoritics and Key Meteorite Collections Gerald Joseph Home McCall, A. J. Bowden, Richard John Howarth, 2006 This Special Publication has 24 papers with an international authorship and is prefaced by an introductory overview which presents highlights in the field The first section covers the acceptance by science of the reality of the falls of rock and metal from the sky an account that takes the reader from BCE before common era to the nineteenth century The second section details some of the world's most important collections in museums their origins and development The Smithsonian chapter also covers the astonishingly numerous finds in the cold desert of Antarctica by American search parties There are also contributions covering the finds by Japanese parties in the Yamato mountains and the equally remarkable discoveries in the hot deserts of Australia North Africa Oman and the USA The other seven chapters take the reader through the revolution in scientific research on meteoritics in the later part of the twentieth century including terrestrial impact cratering and extraordinary showers of glass from the sky tektites now known to be Earth impact sourced Finally the short epilogue looks to the future *Literature 1980, Part 2* Siegfried Böhme, Professor Dr. Walter Fricke, Inge Heinrich, Wilfried Hofmann, Dietlinde Krahn, Dorothea Rosa, Dr. Lutz D.
