

This monograph contains an account of a follow-up study of 990 patients originally admitted to a Norwegian mental hospital during 1938-60 and who subsequently exhibited the clinical features of a schizophrenic illness. The follow-up period extended from 5 to 34 years and the investigation must have been pursued most energetically since, we are told, it involved 300 000 kilometres of driving by the investigators. The special feature of the enquiry is the author's application of the Kleist-Leonhard system of classification to his clinical material. In the event, however, the use of these criteria enable him to assert little more than that the chronic schizophrenic psychoses constitute a heterogeneous group of conditions. Which is hardly a novel conclusion.

Origin, Prevention and Treatment of Affective Disorders. Edited by M. Schou and E. Strömberg. (Pp. 299; illustrated; £9.80.) Academic Press: London. 1979.

This book presents the proceedings of one of the symposia held at Risskov in 1978 to celebrate the 50th anniversary of the University of Aarhus. As might be expected, there is a strong preponderance of Scandinavian contributors with an emphasis on biological, genetic and epidemiological research into the affective illnesses, much of it published elsewhere. The most striking feature of the volume, however, is the devotion of the first third of the contents to lithium and its clinical effects. The editors' explanation of this choice - that it reflects the usual sequence of events in clinical psychiatry - is somewhat ingenuous: the explosion of interest in lithium during the 1970s can be attributed in large measure to the Danish engine-room at Risskov and, in particular, to the tireless activities of Dr Mogens Schou. The essence of the story is contained in the first two chapters, both by Schou, one an historical account of local 'lithium research' and the other a list of some 250 Risskov publications on lithium over a 25-year period, to many of which his name is attached. Now that the lithium bubble is bursting, such information may prove to be of some value to the future student of the natural history of over-valued treatments in psychiatry.

Functional Neurosurgery. Edited by T. Rasmussen and R. Marino Jr. (Pp. 278; illustrated; price not stated.) Raven Press: New York. 1979.

Functional neurosurgery is concerned with the treatment of pain, spasticity, movement disorders, epilepsy, endocrine disorders, and behavioural or psychiatric disturbances. It contrasts with structural neurosurgery which is concerned with lesions which distort the anatomy of the brain.

In this book there are chapters on all the aspects

of functional neurosurgery referred to above but, regrettably, not on the stereotaxic interpretation of computerized tomography (CT scan). Operations for pain are represented by thermo-coagulation of the trigeminal ganglion for tic douloureux, which holds much promise of success. Spasticity and movement disorders have been extensively treated by surgery in the past, but with rather unreliable results which were usually inferior to medical therapy. However, further research continues in this field. The surgery of epilepsy is described, and there is a most valuable chapter from the Montreal Neurological Institute reviewing their huge experience of cortical resection for focal epilepsy. Stimulation techniques are considered in relation to epilepsy and in other contexts. Endocrine surgery for the removal of hypersecreting microadenomas of the pituitary has earned its place. The comprehensive description of current psychosurgical techniques will be of special interest to psychiatrists. There is also a good summary of present views on the selection of patients for psychosurgery and of its results. The psychological assessment of patients is also given attention.

This is a first class book, bringing together many subjects which are all related in some way to neurophysiology. Indeed, functional neurosurgery is more than a treatment technique; it also provides research information concerning brain function which is of inestimable value. Physicians should not miss the opportunity to read about what is being done in this field. It has a direct interest for psychiatrists and all those working in the neurosciences, and is a useful reference book for neurosurgeons.

The Bases of Addiction. Edited by J. Fishman. (Pp. 537; illustrated; price not stated.) Dahlem Konferenzen: Berlin. 1978.

Factors Affecting the Action of Narcotics. Edited by M. W. Adler, L. Manara and R. Samanin. (Pp. 774; illustrated; \$51.35.) Raven Press: New York. 1977.

Predicting Dependence Liability of Stimulant and Depressant Drugs. Edited by T. Thompson and K. R. Unna. (Pp. 328; illustrated; £13.95.) MTP Press: Lancaster. 1978.

Acute Drug Abuse Emergencies. Edited by P. G. Bourne. (Pp. 357; illustrated; £11.70.) Academic Press: London. 1977.

The several faces of addiction research are presented by these four books. The first of them, a Dahlem Workshop Report, takes a wide-angled perspective: its objectives were to identify not only common factors involved in the addiction to various substances but also the factors underlying susceptibility to become addicted. The papers are presented by a carefully chosen international group of laboratory workers and clinical scientists who provide a useful
