Origins of Anatomically Modern Humans Doris V. Nitecki, Matthew H. Nitecki, 2013-11-11 This volume is based on the Field Museum of Natural History Spring Systematics Symposium held in Chicago on May 11 1991 The financial support of Ray and Jean Auel and of the Field Museum is gratefully acknowledged When we teach or write we present only those elements that support our arguments We avoid all weak points of our debate and all the uncertainties of our models Thus we offer hypotheses as facts Multiauthored books like ours which simultaneously advocate and question diverse views avoid the pitfalls and lessen the impact of indoctrination In this volume we analyze the anthropological and biological disagreements and the positions taken on the origins of modern humans point out difficulties with the interpretations and suggest that the

concept of the human origin can be explained only when we first attempt to define Homo sapiens sapiens One of the major controversies in physical anthropology concerns the geographic origin of anatomically modern humans It is undisputed due to the extensive research of the Leakeys and their colleagues that the family Hominidae originated in Africa but the geographic origin of Homo sapiens sapiens is less concretely accepted Two schools of thought exist on this topic The

Nathaniel Gates, 2014-05-01 Explores the

concept of race The term race which originally denoted genealogical or class identity has in the comparatively brief span of 300 years taken on an entirely new meaning In the wake of the Enlightenment it came to be applied to social groups This ideological transformation coupled with a dogmatic insistence that the groups so designated were natural and not socially created gave birth to the modern notion of races as genetically distinct entities The results of this view were the encoding of

race and racial hierarchies in law literature and culture How racial categories facilitate social control The articles in the series demonstrate that the classification of humans according to selected physical characteristics was an arbitrary decision that was not based on valid scientific method They also examine the impact of colonialism on the propagation of the concept and note that racial categorization is a powerful social force that is often used to promote the interests of dominant social groups Finally the collection surveys how laws based on race have been enacted around the world to deny power to minority groups A multidisciplinary resource This collection of outstanding articles brings multiple perspectives to bear on race theory and draws on a wider range of periodicals than even the largest library usually holds Even if all the articles were available on campus chances are that a student would have to track them down in several libraries and microfilm collections Providing of course that no journals were reserved for graduate students out for binding or simply missing This convenient set saves students substantial time and effort by making available all the key articles in one reliable source Authoritative commentary The series editor has put together a balanced selection of the most significant works accompanied by expert commentary A general introduction gives important background information and outlines fundamental issues current scholarship and scholarly controversies Introductions to individual volumes put the articles in context and draw attention to germinal ideas and major shifts in the field After reading the material even a beginning student will have an excellent grasp of the basics of the subject *The evolution of man* Gabriel Ward Lasker, 1965 Outlines of Social Origin J. L. Gillin, 1927
