

Myth: Dyslexia is mostly found in orthographies (writing systems) that are irregular like English. Dyslexia does not exist in Spanish, a transparent orthography.

Fact: Educational & brain research has found that dyslexia in other languages exists. Often the student exhibits serious deficits in phonological processing. That deficit is neurobiological; typically in the brain's ability to process the phonological part of language.

Dyslexia in a transparent orthography may manifest itself differently, however, than in an opaque orthography.

More reading problems are seen in opaque orthographies.
