Modern Uses of Multiple-Valued Logic M. Dunn, G. Epstein, 2012-12-06 This is a collection of invited papers from the 1975 International Symposium on Multiple valued Logic Also included is an extensive bibliography of works in the field of multiple valued logic prior to 1975 this supplements and extends an earlier bibliography of works prior to 1965 by Nicholas Rescher in his book *Many Valued Logic* McGraw Hill 1969 There are a number of possible reasons for interest in the present volume First the range of various uses covered in this collection of papers may be taken as indicative of a breadth which occurs in the field of multiple valued logic as a whole the papers here can do no more than cover a small sample question answering systems analysis of computer hazards algebraic structures relating to multiple valued logic algebra of computer programs fuzzy sets Second a large part of the interest in such uses and applications has occurred in the last twenty even ten years It would be too much to expect this to be reflected in Rescher's 1969 book Third in the 1970's a series of annual symposia have been held on multiple valued logic which have brought much of this into a sharp focus The 1971 and 1972 symposia were held at the SUNY at Buffalo the 1973 symposium at the University of Toronto and the 1974 symposium at West Virginia University Papers from these symposia are included in the bibliography which may be found in an appendix of this book

Fractional Programming I.M. Stancu-Minasian, 2012-12-06 Mathematical programming has known a spectacular diversification in the last few decades This process has happened both at the level of mathematical research and at the level of the applications generated by the solution methods that were created To write a monograph dedicated to a certain domain of mathematical programming is under such circumstances especially difficult In the present monograph we opt for the domain of fractional programming Interest of this subject was generated by the fact that various optimization problems from engineering and economics consider the minimization of a ratio between physical and/or economical functions for example cost/time cost/volume cost/profit or other quantities that measure the efficiency of a system For example the productivity of industrial systems defined as the ratio between the realized services in a system within a given period of time and the utilized resources is used as one of the best indicators of the quality of their operation Such problems where the objective function appears as a ratio of functions constitute fractional programming problem Due to its importance in modeling various decision processes in management science operational research and economics and also due to its frequent appearance in other problems that are not necessarily economical such as information theory numerical analysis stochastic programming decomposition algorithms for large linear systems etc the fractional programming method has received particular attention in the last three decades

Modern Romania Tom Gallagher, 2008-03 Since the 1989 fall of Communism in Eastern Europe Romania arguably the most regimented of states in the Soviet bloc has struggled with the transition from totalitarian state to democratic nation In this insightful examination of modern Romania Tom Gallagher provides an overview of Romania s unique political and social history focusing on both its national identity as well as the legacy of Soviet rule Gallagher provides an in depth look at Romania since 1989 focusing on the government s attempts at economic reform engagement with democracy problems with corruption among the ruling elite

as well as the weakness of civil society and the resilience of implacable expressions of nationalism Ultimately Gallagher argues that thus far democracy has essentially failed in Romania In fact he warns that Romania is on its way to becoming one of the most unequal states in Europe and quite possibly a future trouble spot unless efforts to resume much needed reforms are undertaken *Revue Roumaine de Géologie, Géophysique Et Géographie* ,1983 **Handbook of Global**

Optimization R. Horst,Panos M. Pardalos,2013-12-11 Global optimization is concerned with the computation and characterization of global optima of nonlinear functions During the past three decades the field of global optimization has been growing at a rapid pace and the number of publications on all aspects of global optimization has been increasing steadily Many applications as well as new theoretical algorithmic and computational contributions have resulted The Handbook of Global Optimization is the first comprehensive book to cover recent developments in global optimization Each contribution in the Handbook is essentially expository in nature but scholarly in its treatment The chapters cover optimality conditions complexity results concave minimization DC programming general quadratic programming nonlinear complementarity minimax problems multiplicative programming Lipschitz optimization fractional programming network problems trajectory methods homotopy methods interval methods and stochastic approaches The Handbook of Global Optimization is addressed to researchers in mathematical programming as well as all scientists who use optimization methods to model and solve problems *Multiple Nationality And International Law* Alfred Michael Boll,2007 This book is a comprehensive overview of multiple nationality in international law and contains a survey of current State practice covering over 75 countries It examines the topic in light of the historical treatment of multiple nationality by States international bodies and commentators setting out the general trends in international law and relations that have influenced nationality While the book s purpose is not to debate the merits of multiple nationality but to present actual state practice it does survey arguments for and against multiple nationality and considers States motivations in adopting a particular attitude toward the topic As a reference work the volume includes a detailed examination of the nature of nationality under international law and the concepts of nationality and citizenship under municipal law The survey of State practice also constitutes a valuable resource for practitioners **Institutionalizing Intersectionality** A. Ethics of Emerging Biotechnologies Maria Sinaci,Stefan Lorenz Sorgner,2018-12-31 Pastor Fritz Jahr used the term bioethics as early as 1927 It was not until the early 1970s that the term was rediscovered in the United States Since then the relevance of this emergent academic field of studies has permanently been growing as the age of biotechnological and medical innovations has only just begun Enormous progress can be expected in various areas relevant to bioethical discourses in the coming decades and centuries In the past years the invention of CRISPR Cas9 has radically changed the possibilities concerning genetic modifications even germline modifications have turned into a practical option These developments need to be investigated by academics from various disciplines which is the reason why the conference series on Bioethics in the New Age of Science was initialized The present volume consists in selected papers from the first International Conference on Bioethics in the New Age of Science which took place on the 4th and 5th of May 2017 at the Vasile Goldis West University of Arad Romania

Coinage and Money in Medieval Greece 1200-1430 (2 vols.) Julian Baker,2020-10-20 Coinage and Money in Medieval Greece 1200 1430 by Julian Baker is a monetary history of medieval Thessaly mainland Greece and the Peloponnese Epiros and adjacent islands The central focus of the book is the record of coin finds and coin types which this study presents in a fully developed political socio economic military and archaeological topographical context In medieval Greece there is a strong symbiosis between monetary and historical developments The general level of documentation is also vastly superior to the preceding middle Byzantine period Volume Two presents and evaluates these data Volume One offers analyses on major historical themes which demonstrate that the monetary sources can hold narratives in their own rights complementing and at times contradicting the established

Military Strategies of the New European Allies Håkan Edström, Jacob Westberg, 2022-12-30 This book analyses how and to what extent ex communist states have adjusted their defence strategies since joining the EU and NATO and how differences and similarities between their strategies can be explained Between 1999 and 2013 four phases of enlargement took place when the European Union EU and NATO allowed 11 new former communist states to enter both organisations These states share some common attributes and experiences related to strategic culture and common experiences during the Cold War era that can potentially explain similarities in behaviour and preferences among them However the strategic adjustments among these states are far from uniform In an effort to explain these differences the book introduces three intervening variables 1 differences in relative power and position in the international system 2 national geographical characteristics and 3 historical experiences related to formative periods of state building processes as well as wars and armed conflicts Empirically the book strives to present and analyse the defence strategies of each of the new allies by conducting a structured focused comparison of official strategic documents from the twenty first century for each of the 11

cases Theoretically and methodologically it introduces an analytical framework enabling us to explain both similarities and differences in the formulation of the strategies of the 11 states and to shed light on their external and internal efforts to promote their strategic interest by operationalising the dependent variable defence strategy The analytical framework combines elements of structural realism with classical realism and constructivist research on unit level characteristics related to relative power and perceptions of strategic exposure This book will be of much interest to students of strategic studies European Union policy NATO and International Relations in general
