*Risk Governance* Ortwin Renn, 2008 First Published in 2008 Routledge is an imprint of Taylor Francis an informa company

*Simplifying Risk Management* Patrick Roberts, 2022-04-24 Recent decades have seen much greater attention paid to risk management at an organizational level as evidenced by the proliferation of legislation regulation international standards and good practice guidance The recent experience of Covid 19 has only served to heighten this attention Growing interest in the discipline has been accompanied by significant growth in the risk management profession but practitioners are not well served with suitable books to guide them in their work or challenge them in their professional development This book attempts to place the practice of risk management within organizations into a broader context looking as much at why we try to manage risk as how we try to manage risk In doing so it challenges two significant trends in the practice of risk management The treatment of risk management primarily as a compliance issue within an overall corporate governance narrative and The very widespread use of qualitative risk assessment tools heat maps etc which have absolutely no proven effectiveness Taken together these trends have resulted in much attention being devoted to developing formalized systems for identifying and analyzing risks but there is little evidence that this is driving practical cost effective efforts to actually manage risk There appears to be a preoccupation with the risks themselves rather than a focus on the positive actions that can and should be taken to benefit stakeholders This book outlines a simple quantitative approach to risk management which refocuses attention on treating risks and presents choices about risk treatment as normal business decisions

*Environmental and Health Risk Assessment and Management* Paolo Ricci, 2005-11-07 This book is about the legal economical and practical assessment and management of risky activities arising from routine catastrophic environmental and occupational exposures to hazardous agents It includes a discussion of aspects of US and European Union law concerning risky activities and then develops the economic analyses that are relevant to implementing choices within a supply and demand framework The book also discusses exposure response and time series models used in assessing air and water pollution as well as probabilistic cancer models including toxicological compartmental pharmaco kinetic models and epidemiological relative risks and odds ratios based models Statistical methods to measure agreement correlation and discordance are also developed The methods and criteria of decision analysis including several measures of value of information VOI conclude the expositions This book is an excellent text for students studying risk assessment and management

*Who's Asking?* Douglas L. Medin, Megan Bang, 2014-01-03 Analysis and case studies show

that including different orientations toward the natural world makes for more effective scientific practice and science education The answers to scientific questions depend on who's asking because the questions asked and the answers sought reflect the cultural values and orientations of the questioner These values and orientations are most often those of Western science In *Who's Asking* Douglas Medin and Megan Bang argue that despite the widely held view that science is objective value neutral and acultural scientists do not shed their cultures at the laboratory or classroom door their practices reflect their values belief systems and worldviews Medin and Bang argue further that scientist diversity the participation of researchers and educators with different cultural orientations provides new perspectives and leads to more effective science and better science education Medin and Bang compare Native American and European American orientations toward the natural world and apply these findings to science education The European American model they find sees humans as separated from nature the Native American model sees humans as part of a natural ecosystem Medin and Bang then report on the development of ecologically oriented and community based science education programs on the Menominee reservation in Wisconsin and at the American Indian Center of Chicago Medin and Bang's novel argument for scientist diversity also has important implications for questions of minority underrepresentation in science

**Environmental Standards** Klaus Pinkau, Ortwin Renn, 2013-03-14 It is not uncommon that a group of scientists from many different disciplines join a working group discuss a topic of interest and edit a volume of articles related to this topic They may even

agree on a jointly written introduction or conclusion The study group Environmental Standards established in 1987 as an expert panel of the German Academy of Sciences and Technology in Berlin broke with that common tradition and became involved in a fascinating but also pain staking experiment to compose a document on setting environmental standards that has been literally written and authorized by all group members The group consisted of eleven individuals representing the following disciplines physics chemistry biology engineering law psychology and sociology economics The study group had two major goals First to provide a document that summarizes the state of the art in each discipline with respect to the topic of environmental standards Since it is impossible to cover all environmental hazards in one book the panel members agreed to limit the discussion of the scientific material to one major case study the effects of ionizing radiation This topic was selected because the scientific data base is well developed in this area and levels of anthropogenic release can be compared with natural background levels These two conditions are rarely met by most chemical hazards

Health and Environmental Risk Assessment P. F.

Ricci, M. D. Rowe, 2013-10-22 Process and input output analysis have emerged as the two principal methods of analyzing health risks of energy technologies. This book describes applications and differences between these two methods with discussions of sources of error and uncertainty, data limitations, and some solutions to common problems. Its goals are to provide understanding of the strengths and weaknesses of the methods and to provide a basis for standardizing risk assessment for energy policy analysis. Sections of the book describe risk analysis and develop issues common to both the process and input output methods; describe data bases and their limitations; discuss use of environmental models for generating environmental information not available in data bases; describe applications of the methods in case studies; and discuss the state of the art of the two models and opportunities for combining them to take advantage of their relative strengths and weaknesses.
