Macroeconomic Forecasting Greg Tkacz,2015-06-30 The literature on economic forecasting has made great strides in the past ten to fifteen years For example new real time databases have led to the development of new tools that can account for revisions to past data dynamic stochastic general equilibrium models are increasingly being used to forecast and diffusion indexes allow forecasters to incorporate the information in hundreds of series when producing forecasts However from a practical perspective such innovations have not trickled down into the toolboxes of most professional economists When confronted with a practical forecasting problem many of these tend to rely on simple approaches that they know and understand such as vector autoregressions VARs Many existing forecasting texts are typically either beyond the scope of practitioners who simply wish to learn some of the latest tools or issues or are written at too introductory a level In light of the above this textbook aims to bridge the gap between the specialized forecasting literature and the ultimate producers of forecasts

Hendry, 1998-10-08 This book provides a formal analysis of the models procedures and measures of economic forecasting with a view to improving forecasting practice David Hendry and Michael Clements base the analyses on assumptions pertinent to the economies to be forecast viz a non constant evolving economic system and econometric models whose form and structure are unknown a priori The authors find that conclusions which can be established formally for constant parameter stationary processes and correctly specified models often do not hold when unrealistic assumptions are relaxed Despite the difficulty of proceeding formally when models are mis specified in unknown ways for non stationary processes that are subject to structural breaks Hendry and Clements show that significant insights can be gleaned For example a formal taxonomy of forecasting errors can be developed the role of causal information clarified intercept corrections re established as a method for achieving robustness against forms of structural change and measures of forecast accuracy re interpreted
