The Observer's Year Patrick Moore, 2006-03-30 For this new edition the text has been brought fully up to date and the period covered is from 2005 to 2010 Inevitably this has meant that large sections of the book have been completely rewritten Much has happened since the rst edition was published in 1998 Patrick Moore December 2004 v 00 OY2e_PRE i xvi qxd 14 2 05 2 03 PM Page vii Contents Preface v Introduction ix Phases of the Moon 2005 2010 xii January 1 February 39 March 67 April 97 May 127 June 155 July 181 August 209 September 237 October 265 November 295 December 325 Appendix A The 88 Constellations 351 Appendix B Glossary 353 Appendix C The Greek Alphabet 363 Index 365 vii 00 OY2e_PRE i xvi qxd 14

The Observer's Year Patrick Moore, 2013-06-29 It was once said that the night sky always looks much the same In fact nothing could be further from the truth There are 365 days in each year 366 in a Leap Year and from an astronomical point of view no two are alike What I aim to do in this book is to go through a complete year and point out some special items of interest for each night It may be a double star a variable star or a nebula it may be a planet or even the Moon in some particular aspect there is plenty of variety Anyone unfamiliar with astronomical terms should consult the Glossary at the end of this book Let it be said at once that you do not need a large and expensive telescope A surprising amount can be seen with the naked eye and binoculars give increased range indeed it is probably fair to say that good binoculars are ideal for the beginner and are far better than very small telescopes Telescopes are of two types refractors and reflectors A refractor collects its light by means of a glass lens known as an object glass OG the light passes down the telescope tube and is brought to focus where an image is formed and is then magnified by a second lens termed an eyepiece

A Great Man of Astronomy Francis Andrew, 2023-01-30 Is this a book that you would read from cover to cover The simple answer is no It is a book that the reader would dip into every now and again to get the flavour of one of Sir Patrick's works There is an appraisal of each of Sir Patrick's works contained within it This book constitutes the first of two or perhaps three volumes of appraisals of Sir Patrick's books Why have I found it necessary to spread out his works across two or three volumes For two

reasons basically firstly Sir Patrick wrote around 200 books throughout his long life secondly is the issue of book availability all of Sir Patrick's books are now out of print and the earlier ones mostly are only sporadically available from antiquarian booksellers It is a great honour for me to have this first volume ready for publication for the centenary year of Sir Patrick's birth in 2023

Spectroscopy: The Key to the Stars Keith Robinson, 2007-08-15 While most amateur astronomers know about the red shift have a general idea of the way that the emission and absorption lines in stellar spectra provide an insight into the atomic processes of the star it is unusual to find someone who has any kind of detailed knowledge The reason isn't lack of interest far from it but is because all the books currently available are pitched at professional astronomers and degree students and are to say the least difficult to read This is the first non technical book on this subject written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out or who is interested in observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for him And of course armchair astronomers who simply want to understand the physical processes which shape lines in stellar spectra will find this book equally fascinating

Astronomical Sketching: A Step-by-Step Introduction Richard Handy, David B. Moody, Jeremy Perez, Erika Rix, Sol Robbins, 2007-06-12 This book presents the amateur with fine examples of astronomical sketches and step by step tutorials in each medium including pencil pen and ink chalks and pastels painting and computer graphics programs This unique book can teach almost anyone to create beautiful sketches of celestial objects by following simple illustrated step by step instructions Readers can select a chapter related to their preferred class of object and rapidly learn techniques in several media Each chapter contains useful information regarding equipment techniques for preserving and archiving sketches and suggestions for accurate record keeping

AstroFAQs Stephen F. Tonkin, 2012-12-06 An increasing number of people are taking advantage of the relatively low prices of astronomical equipment Many of these people are doing so with little knowledge of practical astronomy and as the volume of questions asked at astronomical society meetings and on internet newsgroups attest there is a need for these questions to be answered in one place Hence this book The fundamental premise behind *AstroFAQs* is that the beginning amateur astronomer wishes to get up and running with the minimum delay A secondary premise is that anyone will better appreciate why something is done as it is if there is an understanding of the underlying principles *AstroFAQs* addresses both these premises *AstroFAQs* makes no pretence to go into great depth that would be impossible in such a slim volume but it will give you the kick start you need to choose and use your instrument effectively and will take you to a level of expertise that is significantly higher than the beginner status It uses a hierarchical section numbering system that simplifies cross referencing Suggestions for more in depth reading are given throughout More and more newbie astronomers are entering

this fascinating hobby by purchasing one of the gee whiz GOTO telescopes of which there is an increasing selection These serve the wish to begin observation as soon as possible but they do so at a price premium **Astronomy with a Budget Telescope** Patrick Moore, John Watson, 2013-03-09 Sir Patrick Moore CBE FRS has long been the scourge of those people selling low cost astronomical telescopes via mail order catalogues and non specialist stores Ten years ago the quality was appalling and disappointment would have been almost guaranteed but times have changed and having surveyed some the best and worst of today s inexpensive mail order catalogue and main street astronomical telescopes Patrick has admitted to being astonished by how good some of them are Today the best are now excellent value and useful instruments Part One of Astronomy With a Mail order Telescope provides reports on some available models along with detailed and essential hints and tips about what to look for when buying Part Two describes how best to use the telescope which celestial objects to observe with full page star charts to help find them what you can expect to see and how to take and even computer enhance astronomical photographs **Aurora** Neil Bone, 2007-06-05 This new book addresses a gap in the literature offering an explanation of the aurora s causes how the occurrence of major events may now be predicted and how amateur observers can go about recording displays This is the first serious book about aurora written for practical but non professional observers It provides a concise accessible description of the various auroral forms and how to record them illustrated with color images of recent displays It contains details of Space Weather forecasting websites how to interpret and use the information given on these and how to anticipate auroral activity It Came From Outer Space Wearing an RAF Blazer! Martin Mobberley, 2013-07-23 To British television viewers the name Patrick Moore has been synonymous with Astronomy and Space Travel since he first appeared on The Sky at Night in 1957 To amateur astronomers he has been a source of inspiration joy humour and even an eccentric role model since that time Most people know that his 55 years of presenting The Sky at Night is a world record but what was he really like in person What did he do away from the TV cameras in his observatory and within the British Astronomical Association the organisation that inspired him as a youngster Also precisely what did he do during the War Years a subject that has always been shrouded in mystery Martin Mobberley a friend of Patrick Moore s for 30 years and a former President of the British Astronomical Association has spent ten years exhaustively researching Patrick s real life away from the TV cameras His childhood RAF service tireless voluntary work for astronomy and charity and his endless book writing are all examined in detail His astronomical observations are also examined in unprecedented detail along with the battles he fought along the way and his hatred of bureaucracy and political correctness No fan of Sir Patrick Moore can possibly live without this work on their bookshelf Retaliation of The Cursed Stephen Arthur Martin Jr., 2021-11-04 Retaliation of the Cursed A Historical Investigation of The Origins of Worship World Religion Mythology Paganism Astrology and Atheism and Their Contributions Leading to Modern Hinduism is a sweeping look at the ancient cross cultural flows that worked to shape the long legacies of the major religions right up to our contemporary

moment Primarily grounded in examining the Sumerian Akkadian Greek Egyptian Pagan and biblical origins of various religious figures practices and beliefs but drawing on a wide array of mythologies that stretch beyond this this book is stunning in its scope and impressive in the rich fascinating detail in which it presents its findings Ultimately author Stephen Martin makes a compelling case for the shared origins of the world s great religions arguing that by reincorporating many previously excommunicated spiritualities and atheisms Hinduism manifested itself as the complex multi faceted cosmology it is today As well suited to an amateur audience as it would to a professional theologian this book is sure to make an excellent read for anyone interested in studies of comparative religion or ancient civilizations or those simply interested in better understanding the roots of the religious beliefs and spiritual practices of themselves and those around them *Guide to Observing Deep-Sky Objects* Jeff Farinacci,2008 *Guide to Observing Deep Sky Objects* is an invaluable reference for all amateur astronomers The book contains for each constellation 1 a star chart showing the Bayer labels 2 a table for many of the stars in the constellation along with their positions and magnitudes and 3 a table of the major deep sky objects in the constellation with relevant observational data Facing pages provide unique year long graphs that show when the constellation is visible in the sky which allows the user to quickly determine whether a given constellation can be seen and when the best time to see it will be **A User's Guide to the Meade LXD55 and LXD75 Telescopes** Martin

Peston,2010-04-28 I have owned telescopes for over 25 years since I was a young lad I purchased an LXD55 AR 6 Refractor in 2002 and was one of the first to own one in the UK I am also a proud owner of an LXD75 SC 8 Armed with these two very different telescopes I have spent many hours searching the skies for interesting objects using Meade s Autostar Goto facility My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55 com website From then on I have had regular emails from people asking technical questions about the telescope and which model is best suited for them Whilst attending Star parties in the UK I found that many LXD owners would struggle to use them even at a basic level especially if they have never owned or used an equatorially mounted Goto telescope before Since the first LXD55 models came out in early 2002 owners have struggled to find useful information to help them use the telescopes to the best advantage There have been mixed reactions about its quality and performance Hence this book is directed towards those who are new to Goto and the LXD telescope Jesus: The Unauthorized Biography Martyn Whittock,Esther Whittock,2021-05-21 By bringing together all of the available evidence on the life of Jesus Christ of Nazareth this book offers a compelling biography of His time on Earth Looking at sources such as the gospels inscriptions early Church writings the apocryphal gospels and more readers will be able to vividly visualise Jesus life and his First Century Jewish cultural context If you ve ever wondered about the impact of Jesus social class on his ministry the influence on His disciples of contemporary resistance movements or the prominent role of women in the disciple community then allow this book to challenge and deepen your understanding of the Jesus described in the Bible

Seeing in the Dark Timothy Ferris, 2012-12-18 In Seeing in the Dark a poetic love letter to science and to the skies Timothy Ferris invites us all to become stargazers He recounts his own experiences as an enthralled lifelong amateur astronomer and reports from around the globe from England and Italy to the Florida Keys and the Chilean Andes on the revolution that's putting millions in touch with the night sky In addition Ferris offers an authoritative and engaging report on what's out there to be seen what Saturn the Ring nebula the Silver Coin galaxy and the Virgo supercluster really are and how to find them The appendix includes star charts observing lists and a guide on how to get involved in astronomy Ferris takes us inside a major revolution sweeping astronomy as lone amateur astronomers in global networks linked by the Internet make important discoveries that are the envy of the professionals His ability to describe the wonders of the universe is simply magical and his enthusiasm for his subject is irresistible

Mercury, 2001 Observing Comets Nick James, Gerald North, 2013-11-11 Since comet Shoemaker Levy collided with the planet Jupiter with stupendous force in 1994 there has been an upsurge of amateur interest in comets Most comets are first discovered by amateur astronomers because there are so many amateurs looking for them and techniques and instruments have improved dramatically in the past few years After a short but detailed introduction to the comets themselves Nick James and Gerald North describe comet hunting photographing and imaging comets and digital image processing The use of computers for orbital calculations and even helping to discover new comets is given a full chapter as are advanced techniques including comet photometry and spectroscopy This comprehensive book has an accompanying CD ROM and is at once a primer for comet hunters and a reference text for more advanced amateur astronomers
