Sea Of Tomorrow:

Agency and Integrality Michael J. White, 2012-12-06 It is not very surprising that it was no less true in antiquity than it is today that adult human beings are held to be responsible for most of their actions Indeed virtually all cultures in all historical periods seem to have had some conception of human agency which in the absence of certain responsibility defeating conditions entails such responsibility Few philosophers have had the temerity to maintain that this entailment is trivial because such responsibility defeating conditions are always present Another not very surprising fact is that ancient thinkers tended to ascribe integrality to what is to on That is they typically regarded what is as a cosmos or whole with distinguishable parts that fit together in some coherent or cohesive manner rather than either as a unity with no parts or as a collection containing members ta onta or things that are standing in no natural relations to one another 1 The philosophical problem of determinism and responsibility may I think best be characterized as follows it is the problem of preserving the phenomenon of human agency which would seem to require a certain separateness of individual human beings from the rest of the cosmos when one sets about the philosophical or scientific task of explaining the integrality of what is by means of the development of a theory of causation or explanation concepts that came to be lumped together by the Greeks under the term aitia

Fate, Logic, and Time Steven M. Cahn, 2004-04-07 This book is the first full length treatment of the philosophical problem of fatalism the thesis that the laws of logic alone suffice to prove that no person ever acts freely After a critical examination of the history of the problem from Aristotle through Stoic and medieval thought Cahn analyzes contemporary discussions of the issue revealing how a belief in free will is logically connected to specific assumptions about the truth value of propositions and the nature of time

The Open Future Patrick Todd, 2021-09-02 In *The Open Future* Why Future Contingents are all False Patrick Todd launches a sustained defense of a radical interpretation of the doctrine of the open future He argues that all claims about undetermined aspects of the future are simply false Todd argues that this theory is metaphysically more parsimonious than its rivals and that objections to its logical and practical coherence are much overblown Todd shows how proponents of this view can maintain classical logic and argues that the view has substantial advantages over Ockhamist supervaluationist and relativist alternatives Todd draws inspiration from theories of neg raising in linguistics from debates about omniscience within the philosophy of religion and defends a crucial comparison between his account of future contingents and certain more familiar theories of counterfactuals Further Todd defends his theory of the open future from the charges that it cannot make sense of our practices of betting makes our credences regarding future contingents unintelligible and is at odds with proper norms of assertion In the end in Todd's classical open future we have a compelling new solution to the longstanding problem of future contingents

Time and Causation Michael Tooley, 1999 First published in 1999 Routledge is an imprint of Taylor Francis an informa company *The Language of Time* Richard M. Gale, 2025-09-01 First published in 1968 *The Language of Time* clarifies certain large scale features of ordinary or common

sense concept of time by using linguistic analysis or ordinary language philosophy The author does so by studying the language of time in its everyday employment The book is divided into four parts Part one explores McTaggart's paradox and the language of time Part two is devoted to A Determinations and B Relations and discusses the most central issue separating the A and B theories the relation between tensed and tenseless discourse Part three examines the logical asymmetries between the Past and the Future and Part four deals with the concept of temporal becoming This book will be of interest to students and researchers of philosophy

Facing the Future Nuel Belnap, Michael Perloff, Ming Xu, 2001-08-02 Here is an important new theory of human action a theory that assumes actions are founded on choices made by agents who face an open future It is a theory that makes indeterminism not only intelligible but illuminating Tools from philosophy of language and philosophical logic help generate a full scale account of agents seeing to it that The authors then proceed to clarify a variety of action related topics such as determinism vs indeterminism imperatives promises strategies joint agency could have done otherwise deontic constructions and assertions about a not yet settled future

Tomorrow's Coasts: Complex and Impermanent Lynn Donelson Wright, C. Reid Nichols, 2018-06-15 This book is intended as a conceptual roadmap to show how some of the numerous pieces of complex coastal systems intersect and might interact under changing future environmental regimes It is addressed to a non technical but environmentally literate audience that includes the lay public policy makers planners engineers and academics interested in the causes and consequences of global changes as they are likely to affect coastal systems The book also outlines some strategies for anticipating and responding to the challenges that lie ahead The purpose is not to offer a technical treatise on how to build better numerical models or to provide the cognoscenti with new scientific details or theories Quite on the contrary the authors aim to provide a holistic easy accessible overview of coastal systems and therefore use a writing style that is non technical nonmathematical and non jargonized throughout Wherever scientific terms are required to avoid ambiguity a clear and simple definition is presented and those definitions are repeated in the glossary The authors aim to communicate with all who care about the future of coastal environments In Part 1 they present some underlying general big picture concepts that are applicable to coastal processes and coastal change worldwide Part 2 reviews some of the more important physical ecological and societal causes and outcomes of coastal change A selection of case studies of some prominent and highly vulnerable coastal regions is presented in Part 3 Some strategies for facilitating and supporting collaboration among the global scientific community to enhance future coastal resilience are outlined in Part 4

Aristotle Christopher Shields, 2014-01-10 In this extensively revised new edition of his excellent guidebook Christopher Shields introduces the whole of Aristotle's philosophy showing how his powerful conception of human nature shaped much of his thinking on the nature of the soul and the mind ethics politics and the arts Beginning with a brief biography Shields carefully explains the fundamental elements of Aristotle's thought his explanatory framework his philosophical methodology and his four causal explanatory scheme Subsequently he discusses

Aristotle's metaphysics the theory of categories logical theory and his conception of the human being as a composite of soul and body The last part concentrates on Aristotle's value theory as applied to ethics and politics and assesses his approach to happiness virtue and the best life for human beings before turning to a consideration of Aristotle's theory of rhetoric and the arts with a special focus on his perennially controversial treatment of tragedy This second edition includes an expanded discussion of Aristotle's method and new sections on key issues in perception thought akrasia and mimesis It concludes with an expanded assessment of Aristotle's legacy sketching currently emerging Neo Aristotelian movements in metaphysics and virtue ethics

Rising Seas Vivien Gornitz, 2013-03-12 The Earth's climate is already warming due to increased concentrations of human produced greenhouse gases in the atmosphere and the specter of rising sea level is one of global warming's most far reaching threats Sea level will keep rising long after greenhouse gas emissions have ceased because of the delay in penetration of surface warming to the ocean depths and because of the slow dissipation of excess atmospheric carbon dioxide Adopting a long perspective that interprets sea level changes both underway and expected in the near future Vivien Gornitz completes a highly relevant and necessary study of an unprecedented age in Earth's history Gornitz consults past climate archives to help better anticipate future developments and prepare for them more effectively She focuses on several understudied historical events including the Paleocene Eocene Thermal Anomaly the Messinian salinity crisis the rapid filling of the Black Sea which may have inspired the story of Noah's flood and the Storrega submarine slide an incident possibly connected to a sea level occurrence roughly 8 000 years old By examining dramatic variations in past sea level and climate Gornitz concretizes the potential consequences of rapid human induced warming She builds historical precedent for coastal hazards associated with a higher ocean level such as increased damage from storm surge flooding even if storm characteristics remain unchanged Citing the examples of Rotterdam London New York City and other forward looking urban centers that are effectively preparing for higher sea level Gornitz also delineates the difficult economic and political choices of curbing carbon emissions while underscoring through past geological analysis the urgent need to do so

Sea Grant Colleges United States. Congress. Senate. Labor and Public Welfare, 1966 **The Unnatural History of the Sea** Callum Roberts, 2007-07-14 Humanity can make short work of the oceans' creatures In 1741 hungry explorers discovered herds of Steller's sea cow in the Bering Strait and in less than thirty years the amiable beast had been harpooned into extinction It's a classic story but a key fact is often omitted Bering Island was the last redoubt of a species that had been decimated by hunting and habitat loss years before the explorers set sail As Callum M Roberts reveals in *The Unnatural History of the Sea* the oceans' bounty didn't disappear overnight While today's fishing industry is ruthlessly efficient intense exploitation began not in the modern era or even with the dawn of industrialization but in the eleventh century in medieval Europe Roberts explores this long and colorful history of commercial fishing taking readers around the world and through the centuries to witness the transformation of the seas Drawing on firsthand accounts of early explorers pirates merchants fishers and

travelers the book recreates the oceans of the past waters teeming with whales sea lions sea otters turtles and giant fish The abundance of marine life described by fifteenth century seafarers is almost unimaginable today but Roberts both brings it alive and artfully traces its depletion Collapsing fisheries he shows are simply the latest chapter in a long history of unfettered commercialization of the seas The story does not end with an empty ocean Instead Roberts describes how we might restore the splendor and prosperity of the seas through smarter management of our resources and some simple restraint From the coasts of Florida to New Zealand marine reserves have fostered spectacular recovery of plants and animals to levels not seen in a century They prove that history need not repeat itself we can leave the oceans richer than we found them

The Unruly Ocean Erika Techera, Joy McCann, 2024-11-13 This book introduces non specialist readers to the history of how human societies have sought to control use and exploit our oceans seas and shorelines over time in different geographical and cultural contexts The Unruly Ocean examines the development of the modern international legal regime the law of the sea maritime law marine environmental and pollution law fisheries regulation and underwater cultural heritage law and considers how effective these laws have been in addressing the many challenges facing marine and coastal environments ranging from piracy and war to oil spills and the extraction of marine resources It concludes by discussing the socio ecological crises facing the world s oceans seas and shorelines and explores current ideas for reimagining a legal regime that restores the health of our oceanic realm and offers a more holistic transboundary rights based approach to ocean governance This book will be of value to law and non law undergraduate and postgraduate students as well as research scholars and other educated audiences interested in a legal history of the world s oceans seas and shorelines

Truth, Et Cetera Jonathan Barnes, Professor of Ancient Philosophy Jonathan Barnes, 2007-01-25 Truth etc is a wide ranging study of ancient logic based upon the John Locke lectures given by the eminent philosopher Jonathan Barnes in Oxford Its six chapters discuss first certain ancient ideas about truth secondly the Aristotelian conception of predication thirdly various ideas about connectors which were developed by the ancient logicians and grammarians fourthly the notion of logical form insofar as it may be discovered in the ancient texts fifthly the question of the justification of deduction and sixthly the attitude which has been called logical utilitarianism and which restricts the scope of logic to those forms of inference which are or might be useful for scientific proofs In principle the book presupposes no knowledge of logic and no skill in ancient languages all ancient texts are cited in English translation and logical symbols and logical jargon are avoided so far as possible There is no scholarly apparatus of footnotes and no bibliography It can be read in an armchair Anyone interested in ancient philosophy or in logic and its history will find it interesting
