**Glacier Systems and Seasonal Snow Cover in Six Major Asian River Basins** Savoskul, O. S., Smakhtin, V., 2013 The hydrological roles of glaciers and seasonal snow in the Indus Ganges Brahmaputra Amu Darya Syr Darya and Mekong basins are for the first time assessed comprehensively at a major river basin scale in this paper Contribution of glacier runoff subdivided into renewable and nonrenewable components and seasonal snowmelt to mean annual flow is evaluated for two time slices 1961 1990 and 2001 2010 The recent changes of the hydrological roles of glaciers and snow and the most likely changes of those under future climate change are analyzed *Seasonal Snowpacks* Trevor D. Davies, Martyn Tranter, H. Gerald Jones, 2013-06-29 *Seasonal Snowpacks* examines the processes which control the chemistry of seasonal snowcover and provides detailed information on the biogeographical distribution of snow e.g. urban alpine snowpacks snow composition e.g. micropollutants stable isotopes or the physical and biological processes which influence the chemical changes in snow e.g. wind microbiological activity The fluxes of chemicals at the snow atmosphere and snow soil interfaces are examined as are processes which modify composition within the snowcover It is the first book in which the reader will find a comprehensive overview of the theoretical concepts latest measurement techniques process oriented research methods and models of studies in snow chemistry The linkages between snow chemistry atmospheric chemistry and hydrology will make this book of use to both research workers and students in the physical and biological sciences and to natural resource management personnel Snow Cover Distribution and Dynamics Stanzin Passang, 2024-05-22 This comprehensive book examines a high mountain snow covered expanse spanning an investigation period of almost two decades Leveraging advanced remote sensing and innovative algorithms it meticulously maps the temporal and spatial dimensions of the snow cover extent of Ladakh India Rigorous statistical analyses terrain examinations and a groundbreaking snowfall prediction model contribute to a nuanced understanding Grounded in empirical data the volume not only enriches the research framework but also serves as a guiding compass for sustainable development amid the challenges of global warming Seamlessly blending scientific rigour with a passion for discovery the book invites readers to immerse themselves in a captivating snow clad terrain unlocking the secrets of its unique environment *Snow Cover Distribution and Dynamics* The Trans Himalayan Region of Ladakh India is divided into five chapters The book begins with an introduction and a comprehensive overview of the materials and methods used in the study The focus is on the application of the MODIS NDSI snow mapping algorithm validated using Landsat images The research also involves the development of innovative algorithms for the removal of clouds from MODIS data and for forecasting snowfall The study is further enriched by on ground measurements and the deployment of terrestrial cameras across diverse topographies for data validation Chapter 3 presents the results including observed patterns and trends of the snow cover distribution and the application of an ARIMA model for future snowfall predictions The final two chapters discuss the findings in detail draw conclusions and provide a future outlook thereby
