Penny,Paul Bennett,Mike Herbert,1994 The psychology of health is a rapidly expanding field within psychology It draws upon a number of areas of psychology for its theoretical base but whilst the contribution of social and cognitive psychology is widely acknowledged that of lifespan psychology is perhaps less well recognised However a lifespan perspective has much to offer the health psychologist in the search for a more comprehensive understanding of health and illness This book brings together European American and

Australian researchers whose interests in health psychology can be located within a lifespan context The book explores the relevance of developmental and ageing processes to such issues as health and illness perception illness prevention and health promotion the experience of chronic illness health and illness behaviour and the costs and consequences of illness It does so by addressing specific health concerns within each of five stages in the life cycle childhood adolescence early adulthood middle adulthood and old age Thus for example the implications of emergent sexuality for health are addressed within the section on adolescence psychological aspects of reproductive failure and the new technologies are considered within the section on early adulthood whilst issues of social support social control and health are explored in the section on old age Taken as a whole the book offers the reader an interesting and informative illustration of the ways in which a lifespan perspective can enhance our understanding of health and illness      Perspectives On Loss John H. Harvey, 2014-01-14 Losses

are integral to the human experience but they sometimes unfold in subtle ways Loss is not just about death but can encompass a number of situations such as those gradual losses experienced by the elderly loss of vision mental capacity or hope Intended to stimulate ideas and research in the new area of psychological aspects of loss this sourcebook collects the writing of a set of distinguished scholars representing psychology and related fields The author presents a case for a broadly construed field of loss both personal and interpersonal that would complement other fields such as death and dying traumatology and stress and coping No other volume is as comprehensive in its treatment of this intriguing subject The book begins with an introduction to the concept of loss and discusses the definition of the term and the salience of the topic in the general public in the 1990s Contributors were chosen to represent some of the most interesting current work on different types of loss and adaptation in the whole of the social and behavioral sciences Contents cover such diverse subjects as loss in intimate relationships disability chronic illness genocide sports unemployment and homelessness The book concludes with a commentary section on loss theory and research      **The Fabric of Faithfulness** Steven Garber, 2007-01-11 How do parents professors campus ministers youth pastors and others help students learn to connect what they believe about the world with how they live in it Steven Garber answers this question in this revised edition which includes a new chapter on life formation

**Health and Suffering in America** Robert T. Fancher, 2017-07-12 Health and Suffering in America analyzes how we came to see various forms of suffering as mental illness and argues that social and historical dynamics not scientific discovery gave us this notion Robert Fancher argues that the beliefs of mental health professionals have less to do with science than with the professions own values and ideologies The image we have of mental health care hides vast realms of unexamined assumptions In effect the author maintains that mental health consists of mental health professionals ideas about how people ought to live and act not discoveries about human nature The body of the book consists of detailed analyses and critiques of four influential American cultures of therapy psychoanalysis behaviorism cognitive therapy and biological therapy Fancher emphasizes how heavily their concepts and methods are determined by their cultures rather than

by empirical data Furthermore our notions of mental health are not scientific discoveries but moral ideals Yet mental health workers often fail to understand this As a result they misunderstand their own authority and worse fail to subject their moral ideals to appropriate moral and cultural criticism The new introduction by the author explores how the rise of managed health care coalesces with insistence on parity for mental health problems supported by continuing claims that mental health care is science based
