Investigations into Assessment in Mathematics Education M. Niss, 2013-06-29 This book is one of the first to attempt a systematic in depth analysis of assessment in mathematics education in most of its important aspects it deals with assessment in mathematics education from historical psychological sociological epistemological ideological and political perspectives The book is based on work presented at an invited international ICMI seminar and includes chapters by a team of outstanding and prominent scholars in the field of mathematics education Based on the observation of an increasing mismatch between the goals and accomplishments of mathematics education and prevalent assessment modes the book assesses assessment in mathematics education and its effects In so doing it pays particular attention to the need for and possibilities of assessing a much wider range of abilities than before including understanding problem solving and posing modelling and creativity The book will be of particular interest to mathematics educators who are concerned with the role of assessment in mathematics education especially as regards innovation and to everybody working within the field of
