(Third Edition) Gordon J Johnson, Darwin C Minassian, Robert A Weale, Sheila K West, 2012-03-13 This unique book is a comprehensive coverage of the epidemiology of the world's major blinding eye diseases written by internationally acclaimed experts in each field. Edited by world renowned epidemiologists and ophthalmologists, the chapters on each leading cause of blindness describe its biology, epidemiology, risk factors, clinical trials, possibilities for prevention, and new research avenues. New chapters include Research Synthesis, Epidemiology of Dry Eye Disease, and Epidemiology of Uveitis, as well as programme issues for reaching the goal of eliminating avoidable blindness by 2020. This book is essential for any eye care practitioner interested in the causation or prevention of disease and should be part of any public health discipline's library with a focus on improving eye health worldwide.

Differences Between Emmetropic and Myopic Eyes: Implications for Myopia Development, its Progression, and Ocular Health Pablo De Gracia, Pablo Pérez-Merino, Alexandra Benavente-Perez, Fuensanta Vera-Díaz, 2025-08-26 Myopia, traditionally known as nearsightedness or shortsightedness, is associated with a high risk for potentially blinding conditions such as myopic maculopathy, retinal detachment, glaucoma, and others. The risk for these conditions increases with the amount of myopia. Several treatments are currently available in clinical practice to mitigate the progression of myopia with the goal of ending with the lowest amount of myopia possible. These treatments include low-dose atropine eye drops, specially designed contact lenses, and specially designed ophthalmic lenses. These treatments do not usually fully control the progression of myopia, and we cannot predict which patients will benefit more from one or another treatment. The realm of myopia control remains a vibrant and evolving research arena with a multitude of unanswered questions. Investigating the anatomical, physiological, and functional features that characterize myopic eyes is essential to comprehend the intricate mechanisms that govern the complex problem of myopia development and progression. This ongoing pursuit of knowledge serves as a critical foundation for developing more effective strategies in managing myopia and its associated risks.

Reports of the Committee on Vision National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Vision, 1990-02-01 This is a summary of reports issued since 1947 under the aegis of the National Research Council's Committee on Vision. An abstract summarizing the contents of each report is provided together with information to assist the reader in obtaining copies of the information about early research efforts in such classic areas of vision science as visual search, form discrimination, and aging, together with current problems such as the use of video display terminals. The book will aid vision scientists in gaining a thorough understanding of the recent historical context of vision research.
