McClendon, 2005-01-01 This book is the first devoted to the important innovations in architecture that took place in western Europe between the death of emperor Justinian in A D 565 and the tenth century During this period of transition from Late Antiquity to the Middle Ages the Early Christian basilica was transformed in both form and function Charles B McClendon draws on rich documentary evidence and archaeological data to show that the buildings of these three centuries studied in isolation but rarely together set substantial precedents for the future of medieval architecture He looks at buildings of the so called Dark Ages monuments that reflected a new assimilation of seemingly antithetical barbarian and classical attitudes toward architecture and its decoration and at the grand and innovative architecture of the Carolingian Empire The great Romanesque and Gothic churches of subsequent centuries owe far more to the architectural achievements of the Early Middle Ages than has generally been recognized the author argues [Synopsis: An Annual Index of Greek Studies, 1993, 3](#)

Anglo-Saxon Towers of Lordship Michael G. Shapland,2019-01-10 It has long been assumed that England lay outside the Western European tradition of castle building until after the Norman Conquest of 1066 It is now becoming apparent that Anglo Saxon lords had been constructing free standing towers at their residences all across England over the course of the tenth and eleventh centuries Initially these towers were exclusively of timber and quite modest in their scale although only a handful are known from archaeological excavation There followed the so called tower nave churches towers with only a tiny chapel located inside which appear to have had a dual function as buildings of elite worship and symbols of secular power and authority For the first time this book gathers together the evidence for these remarkable buildings many of which still stand incorporated into the fabric of Norman and later parish churches and castles It traces their origin in monasteries where kings and bishops drew upon Continental European practice to construct centrally planned tower like chapels for private worship and burial and to mark gates and important entrances particularly within the context of the tenth century Monastic Reform Adopted by the secular aristocracy to adorn their own manorial sites it argues that many of the known examples would have provided strategic advantage as watchtowers over roads rivers and beacon systems and have acted as focal points for the mustering of troops The tower nave form persisted into early Norman England where it may have influenced a variety of high status building types such as episcopal chapels and monastic belltowers and even the keeps and gatehouses of the earliest stone castles The aim of this book is to finally establish the tower nave as an important Anglo Saxon building type and to explore the social architectural and landscape contexts in which they operated

Fountains and Water Culture in Byzantium Brooke Shilling,Paul Stephenson,2016-10-13 This book restores the fountains of Roman Byzantium Byzantine Constantinople and Ottoman Istanbul reviving the sounds shapes smells and sights of past water cultures Constantinople the capital of the Byzantine and Ottoman Empires is surrounded on three sides by sea

and has no major river to deliver clean potable water. However, the cultures that thrived in this remarkable waterscape through millennia have developed and sustained diverse water cultures and a water delivery system that has supported countless fountains, some of which survive today. Scholars address the delivery system that conveyed and stored water and the fountains, large and small, from which it gushed. Papers consider spring water, rainwater, and seawater, water suitable for drinking, bathing, and baptism, and fountains, real, imagined, and symbolic. Experts in the history of art and culture, archaeology, and theology, and poetry and prose offer reflections on water and fountains across two millennia in one location. Italian Medieval Sculpture in the Metropolitan Museum of Art and the Cloisters, Metropolitan Museum of Art (New York, N.Y.), Lisbeth Castelnuovo-Tedesco, Jack Soltanian, 2010. The collection of Italian medieval sculpture in The Metropolitan Museum of Art and The Cloisters began with the acquisition in 1908 of a Romanesque column statue. Today the Museum's holdings comprise more than seventy works dating from the ninth to the late fifteenth century. The birthplaces of these works range from Sicily to Venice; some typify local styles, others illustrate the intense artistic exchanges taking place within Italy and between Italy and the wider world. Technological advances of the last decades have made it possible to determine more precisely the materials and techniques from which works of art are made, the history of their alteration, and the mechanisms of their deterioration. Using such techniques, scholars have been able to ascertain, for example, that sculptures previously thought to be modern works carved in the medieval manner were in fact completely authentic. This innovative volume represents a watershed in the study of sculpture, a collaborative dialogue between an art historian and a conservator, between art history and art science, that deepens our understanding of the object we see while illuminating its elusive, enigmatic history. From publisher's description. *Wearmouth & Jarrow*, Sam Turner, Sarah Semple, Alex Turner, 2013-11-01. Presenting the results of new research on the monasteries of Wearmouth and Jarrow, among the most sophisticated centers of learning and artistic culture in 17th and 18th century Europe and the home of Bede and their churches, this study examines the long-lasting effect of their buildings and estates on the surrounding region from the Anglo-Saxon period to the present day. The authors trace these relationships through time with new studies of the changing landscape, the monastery precincts, and the surviving structures themselves, detailing how the historical archaeology of the sites reveals how the churches and their communities were rooted in the landscapes of Northumbria but flourished through their links with other parts of Britain and Europe. Researchers from many different backgrounds contributed to the project, using aerial geophysical, geoarchaeological, and palaeoenvironmental surveys and digital mapping to examine the monasteries and surrounding lands. This book reveals not only the link between the churches and the region's political and economic history but also demonstrates how their cultural significance for local people in northeast England has changed over time.
