[Crossing: A True Story](#) Glyn Vincent,2025-06-24 In early Spring of 2022 the author boarded a 52 foot sailboat to cross the Atlantic with a close friend and a captain and sailor he did not know From the start of the 2 600 mile trip from St Martin in the Caribbean to the Azores off Portugal things went awry with the captain the boat the weather and most precipitously the author s state of mind As a recreational sailor with no experience of being out of sight of land the author s darkest fears materialized as the small crew sailed through squalls then gales and finally a tropical storm with near hurricane force winds

In *Crossing Glyn* Vincent explores why he ventured into the middle of the ocean in the first place and how he first fell in love with the sea. He describes his unsettled childhood in New York City, his parents' tabloid existence, his mother who was the Broadway and television actress Betsy von Furstenberg, and the itinerant, unstable lives of his grandparents and great grandparents whose troubled history goes back on his mother's side to a Gothic castle in Germany and on his father's side to an orphanage in Alexandria, Egypt, and a massacre in Damascus in 1860. In the end, this enthralling memoir is as much about the storm Vincent inherited and harbored within as it is about the one he encountered at sea.

Geology of Holocene Barrier Island Systems Richard A. Jr. Davis, 2012-12-06

Barrier islands represent a complex coastal system that includes a number of different sedimentary depositional environments: nearshore zone, beach dunes, washover fans, marshes, tidal flats, estuaries, lagoons, and tidal inlets. The morphodynamics of these fragile coastal systems provide a further complication to this coastal type. Although barrier islands comprise only 15% of the world's coastline, they have received a far greater proportion of attention from the scientific and engineering community and more recently from coastal managers and environmentalists. Modern barrier islands are arguably the most expensive and most vulnerable of all coastal environments. Pressure from developers for residential, industrial, and recreational development has caused most of our barriers to become significantly impacted by human activity, especially over the past few decades. These pressures have led to extensive preservation of natural barriers through efforts from all levels of government and also by private organizations. Governments have also formed coastal management programs that help to control any future development with the intent being to keep human activity compatible with barrier island morphodynamics. In order to devise appropriate coastal zone management programs, it is necessary to have a comprehensive understanding of the morphodynamics of barrier island systems. This volume provides comprehensive details on barrier island morphology, sediment distribution, and the process-response mechanisms that cause changes to both. These are the important aspects of barrier systems that can provide important input into the development and implementation of coastal management programs.
