Peter Klimley, 2008-06-17 Marine biologist Pete Klimley swims with the sharks He was one of the first scientists to free dive among sharks and he has spent nearly thirty years studying shark behavior sometimes swimming in schools of several hundred sharks From his firsthand observations he has learned that sharks are not the vicious man eaters that we imagine but fascinating animals with complex behaviors Most people who think of sharks at all think immediately of great white sharks But there are more than four hundred species of shark Dr Klimley has studied several species most notably the great white and the hammerhead He describes the great white as the athlete among sharks and the hammerhead as the Ph D of the shark world In *The Secret Life of Sharks* Dr Klimley reveals the significant discoveries he made about hammerhead navigation and great white eating habits By studying hammerheads gathered around underwater seamounts Dr Klimley learned that hammerheads rely on sophisticated tracking of ocean floor magnetism to navigate His long term study of great white sharks off the California coast demonstrated that these huge sharks prefer to eat seals and sea lions because of the energy contained in their fatty bodies They are selective eaters not the man eaters we expect and they sometimes go weeks

between meals But Dr Klimley did observe a ritualized behavior that great whites practice in order to avoid deadly disputes over prey that one shark has captured and another wants Although we have learned a great deal about shark behavior says Dr Klimley there is much that we do not know Unfortunately we are destroying these magnificent creatures of the deep through overfishing and degradation of the oceans Already some populations of sharks have declined steeply Vividly written by one of the foremost authorities on sharks *The Secret Life of Sharks* is a fascinating account of some of the world's most magnificent animals *Great White Sharks* A. Peter Klimley, David G. Ainley, 1998-04-03 Now available in paperback the first comprehensive reference on Great White sharks separates fact from fiction and presents real evidence of the ecology and behavior of these remarkable animals The volume begins with the evolution of the white shark and its relatives and continues with sections on its anatomy behavior ecology distribution population dynamics and interactions with humans Included in the volume are many illustrations maps diagrams graphs and photos Covers all biological aspects of Great White sharks Includes contributions from an international team of leading authorities Heavily illustrated with maps diagrams graphs and photos *The Ocean World Being a Description of the Sea and Some of Its Inhabitants* Louis Figuier, 1872

of Australia's sixth largest city. From the time of the first timber getters through to the present the book traces the cumulative impacts of humans on the now World Heritage listed rainforest and surrounding ecosystems. The city's natural and engineered environments are both fascinating and vulnerable. The construction of massive high rise apartment blocks on what were frontal beach dunes is one of the fundamental mistakes not to be repeated. The book illustrates how and why major environmentally destructive development took place and discusses the impacts of such development on the Gold Coast's beaches, wildlife and terrestrial and marine environments such as the destruction of riparian mangrove forest. The Gold Coast Transformed also shows the possibility of sustaining natural populations and reducing the city's ecological footprint. It will be of interest to ecologists, environmental scientists and managers, town planners, economists, policymakers and the general public.
