**Pollution of the North Sea** Wim Salomons,Brian L. Bayne,Egbert K. Duursma,Ulrich Förstner,2012-12-06 This preface is being written at a time of exceptional public interest in the North Sea following media head lines on toxic algal blooms the mass mortality of common seals and concern over pollution levels These headlines may suggest that pollution of the North Sea is a recent event This is not the case Although no data are available methods simply did not exist it is safe to assume that

emission both into air and water of heavy metals already started to increase in the 19th century. The growth of cities and introduction of sewer systems led to the discharge of raw sewage and sewage sludge. The introduction of man-made xenobiotic organic chemicals and their subsequent emission into the North Sea commenced before the second world war. The shallower and coastal areas of the North Sea receive the highest concentrations of these pollutants. Not unexpectedly, these areas, some Norwegian fjords, the Dutch coast, the German Bight, show signs of ecosystem deterioration and eutrophication. A certain percentage of the pollutants does not remain in the North Sea but is exported to the Atlantic. The North Sea therefore contributes to the global input of pollutants to the world's oceans. The major part of the pollutants accumulate in the North Sea and are incorporated in the bottom sediments. Although they are out of sight, they should not be out of mind.

**Parks**, 1976. **Ecology and Conservation of Tropical Marine Faunal Communities** K. Venkataraman, C. Sivaperuman, C. Raghunathan, 2013-09-12. This book provides insights into various aspects of marine faunal communities in India which are extremely diverse due to the geomorphologic and climatic variations along the Indian coasts. Consisting of 30 chapters by experts in their respective fields, it is divided into two parts: Part I Tropical Marine Faunal Communities; Part II Ecology and Conservation. Part I highlights the diversity and distribution of Foraminifera, sponges, associated with seagrass, Polychaeta, Opisthobranchia, oysters, copepods, horseshoe and brachyuran crabs, echinoderms, ascidians, fishes, fish parasites, and sea mammals. Topics of Part II include the status and environmental parameters of benthos, the status of coral reefs, the invasion of snowflake coral, the recovery of bleached corals, the socioeconomics and management of dugong, marine biodiversity conservation and management in India, the assessment of the marine fauna of the Indian Wildlife Protection Act, and marine biodiversity protected areas in India. This book will serve as a valuable reference work for marine scientists as well as for environmental managers and policy makers.

*Marine Sciences and Ocean Policy Symposium* David S. Simonett,1979      Marine Anthropogenic Litter Melanie Bergmann,Lars Gutow,Michael Klages,2015-06-01 This book describes how man made litter primarily plastic has spread into the remotest parts of the oceans and covers all aspects of this pollution problem from the impacts on wildlife and human health to socio economic and political issues Marine litter is a prime threat to marine wildlife habitats and food webs worldwide The book illustrates how advanced technologies from deep sea research microbiology and mathematic modelling as well as classic beach litter counts by volunteers contributed to the broad awareness of marine litter as a problem of global significance The authors summarise more than five decades of marine litter research which receives growing attention after the recent discovery of great oceanic garbage patches and the ubiquity of microscopic plastic particles in marine organisms and habitats In 16 chapters authors from all over the world have created a universal view on the diverse field of marine litter pollution the biological impacts dedicated research activities and the various national and international legislative efforts to combat this environmental problem They recommend future research directions necessary for a comprehensive understanding of this environmental issue and the development of efficient management strategies This book addresses scientists and it provides a solid knowledge base for policy makers NGOs and the broader public      **Marine Pollution** Sebastian A. Gerlach,2013-11-11 When in 1966 the Gennan Research Society directed the attention of oceanographers in the Federal Republic of Germany to problems of marine pollution I was not enthusiastic Emphasis on this problem area meant that other important research plans had to be postponed But the lectures at the Third International Oceanographic Congress September 1970 in Tokyo and at the FAO Conference on Marine Pollution and its Effects on Living Resources and Fishing

December 1970 in Rome convinced me that research on problems of marine pollution is a social obligation and that the oceanographer has to take a stand I issued public warnings about the continuing use of pesticides and had to defend myself against protests by the fishing industry and many colleagues who were in November 1970 unaware of the extent of the threat Thus I was required by my profession to acquire an overview of the problems of ocean pollution In 1971 I only needed to familiarize myself with some one hundred bibliographical items In the interim the flood of data has risen dramatically and in the year 1975 no fewer than 868 publications under the heading of Marine Pollution were reported Table 1 It is therefore more and more difficult to distinguish new results of scientific research from the many repetitions and variations and I fear that from year to year my efforts to illustrate the actual status of the problem at a given moment will be subject to more gaps
