*Search for the Past* James Richard Beerbower,1965      **Search for the Past** James Richard Beerbower,1986      **Search for the Past** James R. Beerbower,2003-01-01      *Search for the Past* James R. Beerbower,1966      The Common Fossils of Missouri Athel Glyde Unklesbay,1955 The Missouri Handbooks are intended to bring the products of extensive research to the general public in nontechnical yet scholarly terms and in a convenient paperback format      *Explorers of Deep Time* Roy Plotnick,2022-01-04 Paleontology is one of the most visible yet most misunderstood fields of science Children dream of becoming paleontologists when they grow up Museum visitors flock to exhibits on dinosaurs and other prehistoric animals The media reports on fossil discoveries and new clues to mass extinctions Nonetheless misconceptions abound paleontologists are assumed only to be interested in dinosaurs and they are all too often imagined as bearded white men in battered cowboy hats Roy Plotnick provides a behind the scenes look at paleontology as it exists today in all its complexity He explores the field s aims methods and possibilities with an emphasis on the compelling personal stories of the scientists who have made it a career Paleontologists study the entire history of life on Earth they do not only use hammers and chisels to unearth fossils but are just as likely to work with cutting edge computing technology Plotnick presents the big questions about life s history that drive paleontological research and shows why knowledge of Earth s past is essential to understanding present day environmental crises He introduces readers to the diverse group of people of all genders races and international backgrounds who make up the twenty first century paleontology community foregrounding their perspectives and firsthand narratives He also frankly discusses the many challenges that face the profession with key takeaways for aspiring scientists Candid and comprehensive *Explorers of Deep Time* is essential reading for anyone curious about the everyday work of real life paleontologists      *Time: A Bibliographic Guide* Samuel L. Macey,2018-10-10 Originally published in 1991 A multidisciplinary guide in the form of a bibliography of selected time related books and articles divided into 25 existing academic disciplines and about 100 subdisciplines which have a wide application to time studies      **Species and Speciation in the Fossil Record** Warren D. Allmon,Margaret M. Yacobucci,2016-10-05 Although the species is one of the fundamental units of biological classification there is remarkably little consensus among biologists about what defines a species even within distinct sub disciplines The literature of paleobiology in particular is littered with qualifiers and cautions about applying the term to the fossil record or equating such species with those recognized among living organisms In *Species and Speciation in the Fossil Record* experts in the field examine how they conceive of species of fossil animals and consider the implications these different approaches have for thinking about species in the context of macroevolution After outlining views of the Modern Synthesis of evolutionary disciplines and detailing the development within paleobiology of quantitative methods for documenting and analyzing variation within fossil assemblages contributors explore the challenges of recognizing and defining species from fossil specimens and offer potential solutions Addressing both the tempo and mode

of speciation over time they show how with careful interpretation and a clear species concept fossil species may be sufficiently robust for meaningful paleobiological analyses Indeed they demonstrate that the species concept if more refined could unearth a wealth of information about the interplay between species origins and extinctions between local and global climate change and greatly deepen our understanding of the evolution of life

**The Fossil Book** Patricia Vickers Rich, Thomas Hewitt Rich, Mildred Adams Fenton, Carroll Lane Fenton, 2020-01-15 Expanded edition of definitive guide for professionals and amateurs presents valuable information about finding preserving and studying fossils Over 1 500 drawings and photographs Readable and remarkably comprehensive Chicago Sunday Tribune

**Bibliography of Fossil Vertebrates, 1964-1968** Charles Lewis Camp, 1972

**Origins** Ariel Adrean Roth, 1998 Are the worlds of science and religion irreconcilable Has modern science with its theory of evolution disproved the biblical account of the origin of life If one accepts the biblical account of origins does one then have to reject science Scientist and Christian believer Ariel A Roth argues that taken together science and religion give us a more complete and sensible understanding of the world around us our place in it and our ultimate meaning and fate Roth examines such topics as the evidence for evolution and creation the Flood the strengths and limitations of the scientific method and the reliability of Scripture He concludes that the biblical model of a recent creation by God leaves fewer unanswered questions than either science's evolutionary model or any view between the two positions such as progressive creation or theistic evolution Back cover

**Catastrophic Thinking** David Sepkoski, 2020-09-24 A history of scientific ideas about extinction that explains why we learned to value diversity as a precious resource at the same time as we learned to think catastrophically about extinction We live in an age in which we are repeatedly reminded by scientists by the media by popular culture of the looming threat of mass extinction We're told that human activity is currently producing a sixth mass extinction perhaps of even greater magnitude than the five previous geological catastrophes that drastically altered life on Earth Indeed there is a very real concern that the human species may itself be poised to go the way of the dinosaurs victims of the most recent mass extinction some 65 million years ago How we interpret the causes and consequences of extinction and their ensuing moral imperatives is deeply embedded in the cultural values of any given historical moment And as David Sepkoski reveals the history of scientific ideas about extinction over the past two hundred years as both a past and a current process is implicated in major changes in the way Western society has approached biological and cultural diversity It seems self evident to most of us that diverse ecosystems and societies are intrinsically

valuable but the current fascination with diversity is a relatively recent phenomenon In fact the way we value diversity depends crucially on our sense that it is precarious that it is something actively threatened and that its loss could have profound consequences In *Catastrophic Thinking* Sepkoski uncovers how and why we learned to value diversity as a precious resource at the same time as we learned to think catastrophically about extinction      [The AAAS Science Book List](#) American Association for the Advancement of Science,1970      *The Fascination with Unknown Time* Sibylle Baumbach,Lena Henningsen,Klaus Oschema,2017-11-01 This volume explores unknown time as a cultural phenomenon approaching past futures unknown presents and future pasts through a broad range of different disciplines media and contexts As a phenomenon that is both elusive and fundamentally inaccessible time is a key object of fascination Throughout the ages different cultures have been deeply engaged in various attempts to fill or make time by developing strategies to familiarize unknown time and to materialize and control past present or future time Arguing for the perennial interest in time especially in the unknown and unattainable dimension of the future the contributions explore premodern ideas about eschatology and secular future historical configurations of the perception of time and acceleration in fin de si cle Germany and contemporary Lagos the formation of deep time and timelessness in paleontology and ethnographic museums and the representation of time past present and future alike in music film and science fiction      **Catalog of the United States Geological Survey Library** U.S. Geological Survey Library,1972      **Literature Search Strategies for Interdisciplinary Research** Linda G. Ackerson,2007 The amount of published literature can be overwhelming for scientists and researchers moving from a broad disciplinary research area to a more specialized one particularly in fields that use information from more than one discipline Without a focused inquiry the researcher may find too little information or may be overcome by too much Striking the correct balance of information is the focus of *Literature Search Strategies for Interdisciplinary Research* This useful reference tool studies diverse interdisciplinary areas revealing the general and individual qualities that dictate the strategies of successful searches Beginning with a bare bones search strategy for finding primary research in interdisciplinary areas the book then goes on to provide hints for research in specific disciplines as the unique traits of the individual fields compound the difficulties in interdisciplinary research Individual chapters written by experts in that particular area address ten research fields in depth disclosing the common qualities of interdisciplinary research The study areas covered include Paleontology Crystallography Quaternary Research Human Factors Engineering Nanotechnology Atmospheric Chemistry Bioethics Computational Biology Engineering Entrepreneurship and Machine Learning For scientists and engineers new to their fields as well as librarians whose responsibilities include collecting library materials for newly emerging interdisciplinary research areas Linda Ackerson s guide provides all that is needed to develop a successful search strategy      *Books for Junior College Libraries* American Library Association,1969
