High Confidence Software Reuse in Large Systems Hong Mei, 2008-07-29 Software reuse depicts a great vision for the software industry It has been widely viewed as a promising way to improve both the productivity and quality of software development However despite of the successes we have achieved there are still many issues that have limited the promotion of software reuse in the real world Therefore software reuse has remained an important hotspot of research ICSR is the premier international conference in the field of software reuse It has been an important venue for presenting advances and improvements within the software reuse domain and a powerful driving force in promoting the interaction between researchers and practitioners The theme of ICSR 10 was High Confidence Software Reuse in Large Systems A high confidence system is one that behaves in a well understood and predictable fashion Today's trends towards widespread use of commercial off the shelf COTS technology increased integration continuous evolution and larger scale are yielding more complex software systems So the problem of how to build high confidence complex systems and how to reuse software with a high level of confidence has become a new attractive topic for research Furthermore high level software asset reuse has been a goal for the last 20 30 years and it can still be considered an unsolved question Components based development MDA MDE MDD extreme programming and other techniques or methods are promising approaches to software reuse that still need more research These proceedings report on the current state of the art in software reuse
