Dû-Blayo,Patrice Francour,Jean-Pierre Beurier,Eric Feunteun,Luc Talassinos,2014-03-24 While the European Landscape Convention adopted in Florence in 2000 by the European Council offers a public action framework through a normative definition the marine and submarine dimensions of landscapes are attracting growing interest from researchers worldwide At a time when marine conservation objectives are strongly endorsed by the Convention on Biological Diversity the French Marine Protected Areas Agency a public institution under the governance of the French Ministry of the Environment has gathered prominent experts to draft the very first interdisciplinary overview of underwater seascapes so as to initiate and lend direction to a wider reflection on this emerging research topic *Seagrasses of Australia* Anthony W. D. Larkum,Gary A. Kendrick,Peter J. Ralph,2018-07-27 This book takes the place of Biology of Seagrasses A Treatise on the Biology of Seagrasses with Special Reference to the Australian Region co edited by A W D Larkum A J MacComb and S A Shepherd and published by Elsevier in 1989 The first book has been influential but it is now 25 years since it was published and seagrass

studies have progressed and developed considerably since then The design of the current book follows in the steps of the first book There are chapters on taxonomy floral biology biogeography and regional studies The regional studies emphasize the importance of Australia having over half of the world's 62 species including some ten species published for Australia since the previous book There are a number of chapters on ecology and biogeography fish biology and fisheries and dugong biology are prominent chapters Physiological aspects again play an important part including new knowledge on the role of hydrogen sulphide in sediments and on photosynthetic processes Climate change pollution and environmental degradation this time gain an even more important part of the book Decline of seagrasses around Australia are also discussed in detail in several chapters Since the first book was published two new areas have received special attention blue carbon and genomic studies Seagrasses are now known to be a very important player in the formation of blue carbon i.e. carbon that has a long turnover time in soils and sediments Alongside salt marshes and mangroves seagrasses are now recognized as playing a very important role in the formation of blue carbon And because Australia has such an abundance and variety of seagrasses their role in blue carbon production and turnover is of great importance The first whole genomes of seagrasses are now available and Australia has played an important role here It appears that seagrasses have several different suites of genes as compared with other land plants and even in comparison with freshwater hydrophytes This difference is leading to important molecular biological studies where the new knowledge will be important to the understanding and conservation of seagrass ecosystems in Australia Thus by reason of its natural abundance of diverse seagrasses and a sophisticated seagrass research community in Australia it is possible to produce a book which will be attractive to marine biologists coastal scientists and conservationists from many countries around the world
