American Science Policy since World War II Bruce Smith, 2011-02-01

Just after the close of World War II America's political and scientific leaders reached an informal consensus on how science could best serve the nation and how government might best support science. The consensus lasted a generation before it broke under the pressures created by the Vietnam War. Since then the nation has struggled to reestablish shared beliefs about the means and goals of science policy. In *American Science Policy Since World War II* author Bruce L. R. Smith makes sense of the break between science and government and identifies the patterns in postwar science affairs. He explains that what might otherwise seem to be a miscellaneous set of separate episodes actually constituted a continuing debate of national importance that was closely linked to broad political and economic trends. Smith's precise and unique analysis gives both the scholar and historian a better understanding of where we are and how we got there while casting a modest light on future policy directions. **U.S.**

Government Publication John Spencer Walters, 2005-02-09 Examines the forces that have deflected U.S. Government publication from becoming the public enterprise that Congress had conceived in the nineteenth century. Walters covers everything from the deeply embedded ideas of the American political consciousness and its inhibitive effect on the production, distribution, preservation, and quality of U.S. Government documents to reasons why the executive department circumvented the U.S. Government Printing Office to the causes behind the conspicuous lawlessness of government publication to how the folkways of science served to constrict the sphere of government publication to a narrow strip. Hackett, 1990-07-05 This book examines the structure and operation of peer review as a family of quality control mechanisms and looks at the burdens placed on the various forms of peer review Assuming that peer review is central to the functioning of U S science policy Chubin and Hackett explore the symbolic and practical value of peer review in the making implementing and analysis of this policy

Living in the Labyrinth of Technology Willem H. Vanderburg, 2005-12-15 From the very beginnings of their existence human beings have distinguished themselves from other animals by not taking immediate experience for granted Everything was symbolized according to its meaning and value a fallen branch from a tree became a lever a tree trunk floating in the river became a canoe Homo logos created communities based on cultures humanity s first megaproject Further symbolization of the human community and its relation to nature led to the possibility of creating societies and civilizations Everything changed as these interposed themselves between the group and nature Homo societas created ways of life able to give meaning direction and purpose to many groups by means of very different cultures humanity s second megaproject What Das Kapital did for the nineteenth century and La technique did for the twentieth Willem H Vanderburg s *Living in the Labyrinth of Technology* seeks to create for the twenty first century an attempt at understanding the world in a manner not shackled to overspecialized scientific knowing and technical doing Western civilization may well be creating humanity s third megaproject based not on symbolization for making sense of and living in the world but on highly specialized desymbolized knowing stripped of all peripheral understanding Vanderburg focuses on two interdependent forces in his narrative namely people changing technology and technology changing people The latter aspect although rarely considered turns out to be the more critical one for understanding the spectacular successes and failures of contemporary ways of life As technology continues to change the social and physical world the experiences of this world grow people s minds and society s cultures thereby re creating human life in the image of technology *Living in the Labyrinth of Technology* argues that the twenty first century will be dominated by this pattern unless society intervenes on human as opposed to technical terms **Expanding Underrepresented Minority Participation** Institute of Medicine, National Academy of Engineering, National Academy of Sciences, Policy and Global Affairs, Committee on Science, Engineering, and Public Policy, Committee on Underrepresented Groups and the Expansion of the Science and Engineering Workforce Pipeline, 2011-07-29 In order for the United States to maintain the global leadership and competitiveness in science and technology that are critical to achieving national goals we must invest in research encourage innovation and grow a strong and talented science and technology workforce *Expanding Underrepresented Minority Participation* explores the role of diversity in the science technology engineering and mathematics STEM workforce and its value in keeping America innovative and competitive According to the book the U S labor market is projected to grow faster in science and engineering than in any other sector in the coming years making

minority participation in STEM education at all levels a national priority Expanding Underrepresented Minority Participation analyzes the rate of change and the challenges the nation currently faces in developing a strong and diverse workforce Although minorities are the fastest growing segment of the population they are underrepresented in the fields of science and engineering Historically there has been a strong connection between increasing educational attainment in the United States and the growth in and global leadership of the economy Expanding Underrepresented Minority Participation suggests that the federal government industry and post secondary institutions work collaboratively with K 12 schools and school systems to increase minority access to and demand for post secondary STEM education and technical training The book also identifies best practices and offers a comprehensive road map for increasing involvement of underrepresented minorities and improving the quality of their education It offers recommendations that focus on academic and social support institutional roles teacher preparation affordability and program development Materials Science and Engineering Serving Society R.P.H. Chang,R. Roy,M. Doyama,S. Somiya,1998-12-23 This symposium was organised with the aim of encouraging collaboration in international science and engineering communities for the benefit of human kind It consisted of invited talks by experts on materials and poster presentation papers Approximately 140 scientists participated and the resulting proceedings present an up to date review of the research in this area *OTA Report, "Federally Funded Research, Decisions for a Decade"* United States.
