The Mesolimbic Dopamine System P. Willner, Jürgen Scheel-Krüger, 1991-05-13 The Mesolimbic Dopamine System From Motivation to Action Edited by P Willner Psychology Department City of London Polytechnic London UK and J Scheel Krüger Psychopharmacological Research Laboratory St Hans Hospital Roskilde Denmark The mesolimbic dopamine system is a system of neurons innervating the ventral forebrain which utilizes dopamine as its principal neurotransmitter In recent years this system has become one of the most heavily researched pathways within the brain particularly in relation to its potential involvement in major psychiatric disorders such as schizophrenia mania depression and drug dependence This volume provides a unique and timely multidisciplinary synthesis of our current knowledge of the anatomy pharmacology physiology and behavioural functions of the mesolimbic system and its operation in health and mental disorder *Motivation and Action* Jutta Heckhausen, 2025-09-30 This fourth edition provides translations of all chapters of the most recent sixth German edition of Motivation and Action including one entirely new chapter This volume provides comprehensive coverage of the history of motivation and introduces up to date theories and new research findings Early sections offer a broad introduction to and deep understanding of the field of motivation psychology mapping out different perspectives and research traditions Subsequent chapters examine major themes of human motivation including achievement affiliation and power motivation as well as the fundamentals of motivation psychology such as motivated and goal oriented behaviors implicit and explicit motives and the regulation of development In addition the book discusses the roles of motivation in three practical fields school and college the workplace and sports Topics featured in this text include Dynamic between person and situation in motivating behavior Conscious and unconscious motivators of behavior Drives and incentives in the fields of achievement intimacy sociability and power How the biochemistry and structures of our brain shapes motivated behavior How to engage in intentional goal directed behavior The potential and limits of motivation and self direction in shaping our lives Motivation and Action Fourth Edition is a must have resource for undergraduate and graduate students as well as researchers in the fields of motivation psychology cognitive psychology and social psychology as well as personality psychology and agency

Limbic Motor Circuits and Neuropsychiatry Peter W. Kalivas, Charles D. Barnes, 2019-06-04 Published in 1993 Limbic Motor Circuits and Neuropsychiatry explores the neural circuitry employed by mammals to interpret environmental stimuli that provoke adaptive behavioral responses Internationally recognized biomedical scientists have contributed chapters that describe and evaluate the anatomy physiology pharmacology and pathophysiology of how motivationally relevant environmental or interoceptive stimuli are translated into adaptive or maladaptive behavioral responses The book also examines how classic limbic nuclei communicate with classic motor systems and the implications in neuropsychiatric disorders This reference presents exciting new information that will interest neuroscientists psychiatrists neuropsychopharmacologists and behavioral pharmacologists **Pharmacological Effects of Ethanol on the Nervous**

System Richard A. Deitrich, V. Gene Erwin, 1995-12-21 This book dissects the effects of ethanol on the major neurotransmitter systems affected by ethanol and correlates these actions with the behavioral consequences The subject is approached first from the perspective of the neurochemical system and the behaviors resulting from ethanol's effects on that system The behaviors themselves are discussed in later chapters Some older theories of the effects of ethanol such as the membrane fluidization hypothesis are evaluated in light of new and updated information Fetal Alcohol Syndrome FAS as well as the structural damage in the brain by long term ethanol exposure are also discussed

Dopamine Handbook Leslie L. Iversen, 2010 The discovery of dopamine in 1957-1958 was one of the seminal events in the development of modern neuroscience and has been extremely important for the development of modern therapies of neurological and psychiatric disorders Dopamine has a fundamental role in almost all aspects of behavior from motor control to mood regulation cognition and addiction and reward and dopamine research has been unique within the neurosciences in the way it has bridged basic science and clinical practice Over the decades research into the role of dopamine in health and disease has been in the forefront of modern neuroscience The Dopamine Handbook is the first single volume publication to capture current progress and excitement in this dynamic research field

Neural and Metabolic Control of Macronutrient Intake Hans-Rudolf Berthoud, Randy J. Seeley, 1999-10-25 When an excessive proportion of the human energy requirement is derived from fat the likelihood of obesity increases Any such individual is at risk for diabetes and cardiovascular disease grave and costly health hazards The selective control of fat ingestion is a promising solution to these concerns Existing data suggests that macronutrient intake can be manipulated Further research is working to create pharmacological tools that will suppress fat consumption It will also be possible to fight obesity heart disease and diabetes

Neural and Metabolic Control of Macronutrient Intake systematically discusses the known physiological mechanisms involved in macronutrient selection including their molecular genetic and neurochemical aspects The book is also a critical review of the hypothesis that ingestion of the three nutrients is regulated by separate neural control mechanisms leaving open the possibility that strategies could be devised to intervene in bodily control systems and alter the proportion of fat in the diet This reference provides three types of information First the basic background of the biochemical and physiological systems as they relate to macronutrient selection Second opinions and data concerning to what degree animals and humans show evidence of macronutrient selection And third evidence about how the central nervous system might be involved in the choices animals make among macronutrients

The Limbic Brain Andrew L. Lautin, 2007-05-08 Nearly 50 years ago Karl Pribram in a discussion section accompanying MacLean's proposal of a limbic system criticized the visceral or limbic brain concept as theoretically too vague and cumbersome In a recent review of the limbic system Swanson points to Brodal's criticism that the discovery of connections of limbic structures with virtually all parts of the nervous system render the concept of the limbic system useless and better abandoned Additional

dissatisfaction surrounding the limbic brain concept stems from the feeling that it is historically inert an antiquated 19th century construct In our current age of neural networks and parallel distributed process it is of little value merely an historical curio So why then this introduction to limbic brain anatomy We offer several interrelated rationales behind our labors Recapitulation in the Service of Education Although concepts had evolved in the second half of this century which effectively overthrew the idea of relatively isolated hemispheric districts i e striatal cortical and limbic parsing the hemisphere into these three districts was an important preliminary step achieved by our forebears in their efforts to understand the large scale structure of the higher mammalian cerebral hemisphere An examination of how the limbic brain concept came to be provides an opportunity to recapitulate the process of exploration discovery and understanding as it relates to one of these principle hemispheric domains

The Neurobiology of Cocaine Ronald P. Hammer, Jr., 1995-07-17
Representing the latest data from active research groups The Neurobiology of Cocaine is designed to educate students and inform experts in a rapidly changing field This volume presents current research regarding the mechanisms of cocaine's action in the brain Recent developments of cellular molecular and brain imaging methods provide new evidence that chemical and molecular substrates underlie cocaine reinforcement dependence and withdrawal This book explores the biological bases of such effects describing the brain circuits affected by cocaine neuroendocrine and neurophysiological actions of cocaine neurochemistry and pharmacology of cocaine and cocaine effects on signal transduction gene expression and protein phosphorylation This up to date text also describes the recently cloned class of neurotransmitters affected by cocaine and characterizes their interaction with the drug These reports focus on the effects of chronic exposure and subsequent withdrawal which are differentiated from acute cocaine actions Thus they provide information on brain mechanisms likely active during long term use and abuse in humans Such commonalities are illustrated by a discussion of cocaine action in the human brain as visualized by positron emission tomography This volume is a must for anyone interested in the mechanisms underlying cocaine abuse

Mind Over Brain, Brain Over Mind: Cognitive Causes and Consequences of Controlling Brain Activity Elisabeth V. C. Friedrich, Guilherme Wood, Reinhold Scherer, Christa Neuper, 2015-11-30
This Research Topic combines articles aiming to gain a better understanding on different factors that determine whether people are successful or not in controlling computerized devices with brain signals Since decades technological advancements in neuroscience allow the interpretation of brain signals and their translation into control messages Brain computer interface BCI Moreover the control of brain signals can be used to induce changes in cognition and behavior Neurofeedback NF However the breakthrough of this technology for the broad population in real world applications has not yet arrived Various factors have been related to the individual success in controlling computerized devices with brain signals but to date no general theoretical framework is available In this Research Topic aspects of the training protocol such as instructions task and feedback as well as cognitive and psychological traits such as motivation

mood locus of control and empathy are investigated as determinants of BCI or NF performance Moreover the mechanisms and networks involved in gaining and maintaining control over brain activity as well as its prediction are addressed Finally as the ultimate goal of this research is to use BCI and NF for communication or control and therapy respectively novel applications for individuals with disabilities or disorders are discussed Affect Regulation and the Origin of the Self Allan N. Schore, 2012-08-06 During the past decade a diverse group of disciplines have simultaneously intensified their attention upon the scientific study of emotion This proliferation of research on affective phenomena has been paralleled by an acceleration of investigations of early human structural and functional development Developmental neuroscience is now delving into the ontogeny of brain systems that evolve to support the psychobiological underpinnings of socioemotional functioning Studies of the infant brain demonstrate that its maturation is influenced by the environment and is experience dependent Developmental psychological research emphasizes that the infant's expanding socioaffective functions are critically influenced by the affect transacting experiences it has with the primary caregiver Concurrent developmental psychoanalytic research suggests that the mother's affect regulatory functions permanently shape the emerging self's capacity for self organization Studies of incipient relational processes and their effects on developing structure are thus an excellent paradigm for the deeper apprehension of the organization and dynamics of affective phenomena This book brings together and presents the latest findings of socioemotional studies emerging from the developmental branches of various disciplines It supplies psychological researchers and clinicians with relevant up to date developmental neurobiological findings and insights and exposes neuroscientists to recent developmental psychological and psychoanalytic studies of infants The methodology of this theoretical research involves the integration of information that is being generated by the different fields that are studying the problem of socioaffective development neurobiology behavioral neurology behavioral biology sociobiology social psychology developmental psychology developmental psychoanalysis and infant psychiatry A special emphasis is placed upon the application and incorporation of current developmental data from neurochemistry neuroanatomy neuropsychology and neuroendocrinology into the main body of developmental theory More than just a review of several literatures the studies cited in this work are used as a multidisciplinary source pool of experimental data theoretical concepts and clinical observations that form the base and scaffolding of an overarching heuristic model of socioemotional development that is grounded in contemporary neuroscience This psychoneurobiological model is then used to generate a number of heuristic hypotheses regarding the proximal causes of a wide array of affect related phenomena from the motive force that drives human attachment to the proximal causes of psychiatric disturbances and psychosomatic disorders and indeed to the origin of the self

Brain Dynamics and the Striatal Complex Robert Miller, Jeffrey Wickens, 2003-09-02 Brain Dynamics and the Striatal Complex the first volume in the Conceptual Advances in Brain Research book series relates dynamic function to cellular structure and synaptic organization in the basal ganglia The striatum is the largest nucleus within the basal

ganglia and therefore plays an important role in understanding structure function relationships Areas covered include dopaminergic input to the striatum organization of the striatum and the interaction between the striatum and the cerebral cortex Psychopharmacology Bulletin ,1966 *Emotional Cognition* Simon C. Moore, Mike Oaksford, 2002-01-01 Emotional Cognition gives the reader an up to date overview of the current state of emotion and cognition research that is striving for computationally explicit accounts of the relationship between these two domains Many different areas are covered by some of the leading theorists and researchers in this area and the book crosses a range of domains from the neurosciences through cognition and formal models to philosophy Specific chapters consider amongst other things the role of emotion in decision making the representation and evaluation of emotive events the relationship of affect on working memory and goal regulation The emergence of such an integrative computational approach in emotion and cognition research is a unique and exciting development one that will be of interest to established scholars as much as graduate students feeling their way in this area and applicable to research in applied as well as purely theoretical domains Series B *Neural Basis of Motivational and Cognitive Control* Rogier B. Mars, 2011 A multidisciplinary overview of key approaches in the study of cognitive control and decision making Emotion and Cognition , 2019-06-05 Emotion and Cognition Volume 246 consists of 16 chapters on recent scientific advances in emotion and cognition research The chapters include theoretical review and empirical chapters presenting original data on interactions between emotion and cognition Chapters touch on a variety of topics including Common and different mechanisms underlying the processing of extrinsic and intrinsic emotion Looming fear stimuli broadens attention in a local global letter task Reading thoughts and feelings in other people how age shapes empathic accuracy How does aging influence emotion cognition links and The Motivational Dimensional Model of affect A review of the past 10 years and more Presents the latest research on the interaction between emotion and cognition Uniquely focuses on how these supposedly different aspects interact Contains contributions from world renowned experts on emotion and cognition research **CNS Neurotransmitters and Neuromodulators** Trevor W. Cummings, 1997 Personality disorders affective disorders anxiety neurosis hallucinations and delusions can all be manifestations of a neurological rather than psychiatric problem It is the difference between an organic structural brain disorder and a functional one In practice the dividing line is not always clear Behavioral neurology is the neurology of psychiatry In light of an evolving restructuring of our understanding the authors provide a timely review of clinical behavioral neurology in the setting of contemporary neuroanatomical and neurochemical theory Provides a progressive and comprehensive discussion of behavioral neurology Authored by world recognized experts
