Political Change and Material Culture in Middle to Late Bronze Age Canaan Shlomit Bechar, 2022-09-13 Do shifts in material culture instigate administrative change or is it the shifting political winds that affect material culture This is the central question that Shlomit Bechar addresses in this book taking the transition from the Middle to Late Bronze Age seventeenth fourteenth centuries BCE in northern Canaan as a test case Combining archaeological and historical analysis Bechar identifies the most significant changes evident in architectural and ceramic remains from this period and then explores how and why contemporary political shifts may have influenced or been influenced by these developments Bechar persuasively argues that the Egyptian conquest of the southern Levant enabled by local economic decline following the expulsion of the Hyksos and the fall of northern Syrian cities was the impetus for these changes in ceramics and architecture Using a macro typological approach to examine the ceramic assemblages she also discusses the impact of the influx of Aegean imports suggesting that while attached specialists were primarily responsible for ceramic production in the Middle Bronze Age Late Bronze Age ceramics were increasingly made by independent specialists another important result of the new administrative system created following Thutmose III s campaign An important contribution to our understanding of the transition between the Middle and Late Bronze Ages this original and insightful book will appeal to specialists in the Bronze Age Levant especially those interested in using ceramic assemblages to examine social and political change [The Measure of Civilization](#) Ian Morris, 2014-02-23 A groundbreaking look at Western and Eastern social development from the end of the ice age to today In the past thirty years there have been fierce debates over how civilizations develop and why the West became so powerful The Measure of Civilization presents a brand new way of investigating these questions and provides new

tools for assessing the long term growth of societies Using a groundbreaking numerical index of social development that compares societies in different times and places award winning author Ian Morris sets forth a sweeping examination of Eastern and Western development across 15 000 years since the end of the last ice age He offers surprising conclusions about when and why the West came to dominate the world and fresh perspectives for thinking about the twenty first century Adapting the United Nations approach for measuring human development Morris s index breaks social development into four traits energy capture per capita organization information technology and war making capacity and he uses archaeological historical and current government data to quantify patterns Morris reveals that for 90 percent of the time since the last ice age the world s most advanced region has been at the western end of Eurasia but contrary to what many historians once believed there were roughly 1 200 years from about 550 to 1750 CE when an East Asian region was more advanced Only in the late eighteenth century CE when northwest Europeans tapped into the energy trapped in fossil fuels did the West leap ahead Resolving some of the biggest debates in global history *The Measure of Civilization* puts forth innovative tools for determining past present and future economic and social trends
