**Messerschmitt Me 263 / Ju 248** Uwe W Jack,2024-03-16 In the 1930s in Germany rocket engines and air breathing jet engines were considered equal means of propulsion for high speed aircraft Alexander Lippisch s Messerschmitt Me 163 was a rocket powered interceptor that could climb vertically at a fantastic rate The initial enthusiasm was later replaced by the realization that this aircraft lacked the necessary range and that landing on a skid made the operation complicated The Messerschmitt company and Alexander Lippisch then developed the improved successor the Me 263 also named Junkers Ju 248 This fighter had everything that could be expected for successful use in the Luftwaffe Its top speed was 1000 km h By the end of the war prototypes had flown and additional aircraft were under construction The Soviet Union was impressed and rebuilt and tested this rocket aircraft as the I 270 A version flew in Great Britain as the De Havilland D H 108 with an air breathing turbine engine Many photos original drawings and descriptions present this unusual fighter aircraft in great detail A publication that should not be missed by anyone interested in the Luftwaffe or aviation technology Please note The eBook version for Kindle is formatted as Print Replica in the same layout as the print version and is not optimally formatted for the Kindle reader [Aircraft of the Luftwaffe, 1935-1945](#) Jean-Denis G.G. influenced the direction of aircraft development in the decades following World War II with many of the German engineers responsible for these innovations seamlessly continuing their roles in the United States and the USSR. Modellers have had a long fascination for the Luftwaffe's jet arsenal and secret weapons of fact and fiction and this new Osprey Masterclass will explore the Luftwaffe jets and rocket planes that saw service at the end of World War II. **Rocketing Into the Future** Michel van Pelt, 2012-05-30 This book describes the technology, history, and future of rocket planes. Michel van Pelt journeys into this exciting world, examining the exotic concepts and actual flying vehicles that have been devised over the last hundred years. He recounts the history of rocket airplanes from the early pioneers who attached simple rockets onto their wooden glider airplanes to the modern world of high-tech research vehicles. The author visits museums where rare examples of early rocket planes are kept and modern laboratories where future spaceplanes are being developed. He explains the technology in an easily understandable way, describing the various types of rocket airplanes and looking at the possibilities for the future. Michel van Pelt considers future spaceplanes, presenting various modern concepts and developments. He describes the development from cutting-edge research via demonstrator vehicles to operational use. He also evaluates the replacement of the Space Shuttle with a seemingly old-fashioned capsule system, the parallel developments in suborbital spaceplanes such as SpaceShipOne and SpaceShipTwo, piloted versus automatic flight, and related developments in airliners and military aircraft. [Sack AS 6- Source of Nazi Germany UFO Claims?](#) David Myhra PhD, 2013-09-13 Much has been written about the alleged existence of Nazi flying saucers or disk-shaped flying machines from World War II, however, despite claims of a few, would be obscure former Nazi aviation designers from about mid-1947 and on, there are no original first-hand historical accounts or documents to support these claims. The closest aircraft to fit these descriptions is the Sack AS 6 V1 by a farmer and model builder/flier Arthur Sack, whose AS 6 and Sack himself disappeared completely in 1945. Enjoy reading and viewing the rare photographs about the truth about Nazi Germany's Flying Saucers.

[History of Liquid Propellant Rocket Engines](#) George Paul Sutton, 2006 Liquid propellant rocket engines have propelled all the manned space flights, all the space vehicles flying to the planets or deep space, virtually all satellites, and the majority of medium-range or intercontinental-range ballistic missiles.

[Air Combat 1945](#) Donald Nijboer, 2015-09-15 The final year of World War II witnessed the decline of the piston engine fighter and the beginning of the jet age. Taking to the skies were tried and true fighters, improved versions of old aircraft, and newly developed jets, including prototypes that flew for the first time just before the war ended. Hundreds of photos chronicle these dynamic aircraft in Europe and the Pacific. Includes American Mustangs, Thunderbolts, and Shooting Stars; British

**Cold War Interceptor** Dan Sharp, 2020-02-08 The West was stunned when the Soviet Union dropped its first atomic bomb in August 1949 and a year later the Korean War showcased Russia's incredible technological progress in the form of the MiG 15 a fighter capable of besting anything the RAF had to offer at that time In the wake of the Second World War funding for the RAF's Fighter Command had fallen away dramatically but now there was an urgent need for new jet fighters to meet the threat of Russian bombers head on Britain's top aircraft manufacturers including Hawker English Electric Fairey Vickers Supermarine De Havilland Armstrong Whitworth and Saunders Roe set to work on designing powerful supersonic aircraft with all new guided missile systems capable of meeting a Soviet assault and shooting down high flying enemy aircraft before they could unleash a devastating nuclear firestorm on British soil The result was some of the largest heaviest and most powerful fighter designs the world had ever seen and a heated debate about whether the behemoths should be built at all as guided weapons became ever more advanced This is the story of Britain's secret cold war fighter jet designs fully illustrated with a host of drawings illustrations and photographs

**Sound Barrier** Peter Caygill, 2006-10-30 As the speed of early aircraft gradually increased there eventually became an awareness during the 1940s that strange things were occurring at around 500mph Many later WW2 fighter aircraft were reported to become dangerously uncontrollable in high speed power dives Pilot's and aircraft designers were beginning to encounter the sound barrier We now realize it to be a phenomenon that occurs when the speed of sound is reached and air compressibility demands additional power to break through it Breaking the sound barrier became one of the biggest challenges to the world's aircraft designers and it took great courage and daring for the test pilots of that era to find the way through this difficult obstacle This is the story of how innovative design and pilots learned how to deal with supersonic flight It records the many different experimental aircraft and tells of the experiences of those that flew them Many pilots lost their lives during those dangerous flights but those who

survived became legendary **English text, 2d ed., 1960**, 1960 *Messerschmitt 163* Edward T. Maloney, Uwe Feist, 1968 Famous Fighters Of The Second World War, Volume One William Green, 2016-03-28 This volume is the 1960 follow up to the 1959 publication *Famous Bombers of the Second World War Volume One* William Green here covers a further extensive number of aircraft focussing on the fighters used by the Axis and Allies during the Second World War As before the types in approximate order of introduction to operational service and providing a brief developmental and operational history of each type Includes ME Komet Hawker Hurricane Supermarine Spitfire Mustang FW190 the Russian YAK series Hellcat Mitsubishi Zero BF109 and the Lockheed Lightning An Invaluable companion to Volume One as beautifully and comprehensively illustrated as before Rcaf War Prize Flights, German and Japanese Warbird Survivors Harold A. Skaarup, 2006-05-23 This handbook concerns the collection of Air Technical Intelligence and the test flying of war prizes carried out by two RCAF bomber pilots who were posted to the Royal Aircraft Establishment's Foreign Aircraft Flight Farnborough in the United Kingdom in May 1945 Their primary task was to visit former Luftwaffe airfields and to find and fly back any aircraft they deemed worthy of evaluation The list of aircraft found here does not include every German combat aircraft of the Second World War as it focuses on those warbirds captured and flown by members of the RCAF or sent to Canada as war prizes Very few of these rare aircraft exist today and therefore information on known locations where German Japanese and Italian warbird survivors may be found is included As a member of the Canadian Aviation Preservation Association and the Canadian Aviation Artists Association the author strongly supports the preservation of Canada's aviation heritage The primary intent of this handbook is to provide information for aviation artists and enthusiasts looking for that unusual never before painted military aviation subject and to support the efforts of those engaged in the search for those missing warbirds for which no examples currently exist
