where in the sky those objects are Why were these objects chosen to be studied What discoveries were made from the Hubble Space Telescope photographs This book is for anyone who wants answers to these questions     **Touring the Universe through Binoculars** Philip S. Harrington,1990-10-01 This comprehensive work takes you on a personal tour of the universe using nothing more than a pair of binoculars More comprehensive than any book currently available it starts with Earth s nearest neighbor the moon and then goes on to explore each planet in the solar system asteroids meteors comets and the sun Following this the reader is whisked away into deep space to explore celestial bodies including stars that are known and many sights less familiar The final chapter includes a detailed atlas of deep sky objects visible through binoculars The appendices include guidance on how to buy care for and maintain astronomical binoculars tips and hints on using them and detailed information on several home made binocular mounts     **Chronicling the Golden Age of Astronomy** Neil English,2018-10-31 The invention of the telescope at the dawning of the 17th century has revolutionized humanity s understanding of the Universe and our place within it This book traces the development of the telescope over four centuries as well as the many personalities who used it to uncover brand new revelations about the Sun Moon planets stars and distant galaxies Starting with early observers such as Thomas Harriot Galileo Johannes Hevelius Giovanni Domenico Cassini Robert Hooke and Christian Huygens the book explores how these early observers arrived at essentially correct ideas concerning the objects they studied Moving into the 18th and 19th centuries the author describes the increasing sophistication of telescopes both large and small and the celebrated figures who used them so productively including the Herschels Charles Messier William Lassell and the Earls of Rosse Many great discoveries were also made with smaller instruments when placed in the capable hands of the Struve dynasty F W Bessel Angelo Secchi and S W Burnham to name but a few Nor were all great observers of professional ilk The book explores the contributions made by the clerical astronomers William Rutter Dawes Thomas William Webb T E R Philips and T H E C Espin as well as the lonely vigils of E E Barnard William F Denning and Charles Grover And in the 20th century the work of Percival Lowell Leslie Peltier Eugene M Antoniadi Clyde Tombaugh Walter Scott Houston David H Levy and Sir Patrick Moore is fully explored Generously illustrated throughout this treasure trove of astronomical history shows how each observer s work led to seminal developments in science and providing key insights into how we go about exploring the heavens today     **The Barnard Objects: Then and Now** Tim B. **A Buyer's and User's Guide to Astronomical Telescopes & Binoculars** James Mullaney, 2007-05-26 Both beginning novice amateur astronomers at the level of *Astronomy* and *Night Sky* magazine readers as well as more advanced amateur astronomers level of *Sky and Telescope* will find this book invaluable and fascinating. It includes detailed up-to-date information on sources, selection and use of virtually every major type, brand and model of such instruments on today's market. The book also includes details on the latest released telescope lines, e.g. the 10, 12, 14 and 16 inch aperture models of the Meade LX-R series. As a former editor for *Sky Telescope*, *Astronomy* and *Star Sky* magazines, the author is the ideal person to write this book.

Modern Theories of the Universe Michael J. Crowe, 1994-01-01 This book provides an introduction to the fundamentals of stellar astronomy, a history of astronomy and an account of how the science of astronomy challenged traditional philosophical and theological beliefs. Throughout the text are readings from the writings of scientists who contributed most significantly to the development of astronomy.

*A Buyer's and User's Guide to Astronomical Telescopes and Binoculars* James Mullaney, 2013-10-10 Amateur astronomers of all skill levels are always contemplating their next telescope, and this book points the way to the most suitable instruments. Similarly, those who are buying their first telescopes and these days not necessarily a low cost one, will be able to compare and contrast different types and manufacturers. This exciting and revised new guide provides an extensive overview of binoculars and telescopes. It includes detailed up-to-date information on sources, selection and use of virtually every major type, brand and model on today's market, a truly invaluable treasure trove of information and helpful advice for all amateur astronomers. Originally written in 2006, much of the first edition is inevitably now out of date as equipment advances and manufacturers come and go. This second edition not only updates all the existing sections of *A Buyer's and User's Guide to Astronomical Telescopes and Binoculars* but adds two new ones: Astro imaging and Professional Amateur collaboration. Thanks to the rapid and amazing developments that have been made in digital cameras, not those specialist cool chip astronomical cameras, not even DSLRs, but regular general purpose vacation cameras, it is easily possible to image all sorts of astronomical objects and fields. Technical developments, including the Internet, have also made it possible for amateur astronomers to make a real contribution to science by working with professionals. Selecting the right device for a variety of purposes can be an overwhelming task in a market crowded with observing options, but this comprehensive guide clarifies the process. Anyone planning to purchase binoculars or telescopes for astronomy, whether as a first instrument or as an upgrade to the next level, will find this book a treasure trove of

information and advice It also supplies the reader with many useful hints and tips on using astronomical telescopes or binoculars to get the best possible results from your purchase      *Supernova Search Charts and Handbook Pack/Set ICL* Gregg D. Thompson,James T. Bryan,1989 This unique atlas contains 236 charts of more than 300 of the brightest galaxies each specifically prepared to facilitate the discovery of supernovae The comparison of these charts with the field seen in a telescope enables any extra galactic supernova to be spotted immediately The proto type set of these charts has already resulted in the discovery of several new supernovae The charts include 345 galaxies printed on translucent paper for use on a lightbox each one carrying an explanation of the constellation in which the galaxy lies special characteristics of the galaxy observing instructions expected maximum brightness for the supernovae in each galaxy and the reference for the sequence A handbook which accompanies the charts describes how to make and record supernova discoveries and reviews the present understanding of supernovae      **Astrophotography for the Amateur** Michael A.
