Metabolic Activities Of The Lung:

Metabolic Activities of the Lung, 1980 *Metabolic Activities of the Lung* Ruth Porter, Julie Whelan, 2009-09-14 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world *Lung Development Biological and Clinical Perspectives* Philip Farrell, 2012-12-02 Lung Development Biological and Clinical Perspectives Biochemistry and Physiology Volume I provides a comprehensive and multidisciplinary treatise with regard to surfactant related issues in lung maturation Despite the deliberate emphasis on biochemistry in this volume the aim is to place this information in the perspective of anatomy physiology and clinical perinatology The book is organized into four parts Part I offers a brief historical perspective by reviewing the chronology of clinical and basic advances Part II then establishes a frame of scientific reference by reviewing the morphology and cytology of lung development and the physiology of pulmonary surfactant Stages of development and variations in the maturation process are emphasized while cautions to the biochemist are offered with respect to interpretation of experimental data Part III provides an introduction to lung biochemistry Part IV deals with the developmental biochemistry of lung phospholipid metabolism the featured compound is the predominant surfactant component phosphatidylcholine PC A focal point for discussion concerns regulatory mechanisms operating to control the production of saturated PC during late gestational development of the fetal lung **Intensive Care Medicine** Jean-Louis Vincent, 2003-11-07 The Update compiles the most recent widespread developments of experimental and clinical research and practice in one comprehensive reference book The chapters are written by well recognized experts in the field of intensive care and emergency medicine It is addressed to every one involved in internal medicine anesthesia surgery pediatrics intensive care and emergency medicine **Comparative Biology of the Normal Lung** Richard A. Parent, 2015-03-13 Comparative Biology of the Normal Lung Second Edition offers a rigorous and comprehensive reference for all those involved in pulmonary research This fully updated work is divided into sections on anatomy and morphology physiology biochemistry and immunological response It continues to provide a unique comparative perspective on the mammalian lung This edition includes several new chapters and expanded content including aging and development of the normal lung mechanical properties of the lung genetic polymorphisms the comparative effect of stress of pulmonary immune function oxygen signaling in the mammalian lung and much more By addressing scientific advances and critical issues in lung research this 2nd edition is a timely and valuable work on comparative data for the interpretation of studies of animal models as compared to the human lung Edited and authored by experts in the field to provide an excellent and timely review of cross species comparisons that will help you interpret and compare data from animal studies to human findings Incorporates lung anatomy and physiology cell specific interactions and immunological responses to provide you with a single and unique

multidisciplinary source on the comparative biology of the normal lung Includes new and expanded content on neonatal and aged lungs developmental processes cell signaling antioxidants airway cells safety pharmacology and much more Section IV on Physical and Immunological Defenses has been significantly updated with 9 new chapters and an increased focus on the pulmonary immunological system Controlled Pulmonary Drug Delivery Hugh D.C. Smyth,Anthony J. Hickey,2011-06-24 The pace of new research and level of innovation repeatedly introduced into the field of drug delivery to the lung is surprising given its state of maturity since the introduction of the pressurized metered dose inhaler over a half a century ago It is clear that our understanding of pulmonary drug delivery has now evolved to the point that inhalation aerosols can be controlled both spatially and temporally to optimize their biological effects These abilities include controlling lung deposition by adopting formulation strategies or device technologies and controlling drug uptake and release through sophisticated particle technologies The large number of contributions to the scientific literature and variety of excellent texts published in recent years is evidence for the continued interest in pulmonary drug delivery research This reference text endeavors to bring together the fundamental theory and practice of controlled drug delivery to the airways that is unavailable elsewhere Collating and synthesizing the material in this rapidly evolving field presented a challenge and ultimately a sense of achievement that is hopefully reflected in the content of the volume **Environmental Health Perspectives** ,1993

Advances in Clinical Chemistry ,1987-08-04 Advances in Clinical Chemistry Current Research in Chronic Airways Obstruction David L. Kelble,1968 **Toxicology of Inhaled Materials** H.P. Witschi,J.D. Brain,2012-12-06 This book deals with the methods and scientific basis of inhalation toxicology It describes devices and facilities needed to expose animals to inhaled particles and gases as well as approaches to estimating or measuring the fraction of the inhaled material that is retained in the respiratory tract The book then reviews the evergrowing repertoire of techniques that can be used to measure the responses elicited by the exposure Quantitative and qualitative anatomical physiological and biochemical strategies are discussed in detail We believe that the toxicology of inhaled materials is an important and timely topic for several reasons During the past decade morbidity and mortality attributable to cardiovascular disease have significantly decreased Progress in combatting cancer the second most important cause of death has been slower and lung cancer actually became the leading cause of death in men and the second leading cause of cancer death in women In addition the incidence of non neo plastic respiratory diseases such as emphysema fibrosis and chronic bronchitis has increased the past decade In the United States the National Institutes of Health NIH has recently reported that chronic obstructive pulmonary disease affects nearly 10 million persons and accounts for 59 000 deaths yearly indeed it ranks as the fifth leading cause of death Because the incidence is increasing the NIH estimates that it may become the nation s fourth or even third leading cause of death by the year 2000 *Report of the Director of the National Heart and Lung Institute* National Heart and Lung Institute,1973

Lung Metabolism Alain Junod,2012-12-02 *Lung Metabolism* Proteolysis and Antiproteolysis Biochemical Pharmacology

Handling of Bioactive Substances focuses on studies on the response of the lung relative to the management of bioactive substances Divided into three sections with 35 chapters the book focuses first on proteolysis and antiproteolysis in the lung Concerns include properties and role of antiproteases role of leucoproteases in the development of emphysema and the genetic and clinical considerations of alpha1 antitrypsin deficiencies The second section focuses on biochemical pharmacology of the lung Concerns include pulmonary drug metabolizing enzymes carrier for oxygen and carbon monoxide in the lung and metabolism of drugs administered by aerosol The last section looks at the handling of bioactive substances by the lung Covered areas include the pharmacokinetic function of the lung biosynthesis and metabolism of prostaglandins in the lung and importance and nature of the mechanism of inactivation of prostaglandins in the lung The book is a vital source of information for readers interested in studying the metabolism of the lung **Current Research in Chronic Airways**
