Exploring a Vision National Research Council,Division on Earth and Life Studies,Board on Agriculture and Natural Resources,Planning Group for a Workshop on Exploring a Vision: Integrating Knowledge for Food and Health,Debra P. Davis,Tina I. Rouse,2004-04-30 Centuries of scientific advances in agriculture have increased the quantity quality and variety of our food supply Food in the United States is abundant and affordable incomes are at record levels nutrition and health

knowledge is at an all time high Yet many Americans are not eating a proper diet The result is an obesity epidemic that contributes to rising healthcare costs from increased rates of heart disease stroke diabetes and several cancers Whether we see food as medicine or as the cause of disease medical and agricultural research have the potential to come together in innovative ways to help consumers and producers understand and face the challenges of following a healthful diet More than 100 leaders in agriculture health research education policy and industry convened at the National Academies in June 2003 to share their opinions on what would be a more efficient and effective system for conducting food and health research Some of their thoughts follow Participants concluded that no one organization or agency can solve food related health issues alone the nation needs better mechanisms for bringing together its agriculture and health care infrastructures to address food related health problems Addressing the obesity issue in particular will require a multidisciplinary strategy that includes research on foods consumer knowledge and behavior and the economics of food and health related activities including food pricing health care costs and agricultural support programs

California Agricultural Research Priorities National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on California Agricultural Research Priorities: Pierce's Disease, 2004-10-28 The glassy winged sharpshooter is one of the more recent invasive pests to afflict California agriculture The insect transmits a bacterial pathogen that causes Pierce's disease which has impaired production of wine table and raisin grapes in California The report recommends strengthening the process and

the priorities for research funded by state agencies and wine industry groups to address Pierce's disease and its vector. Research should be focused on identifying feasible options for controlling the spread of the disease and providing sustainable approaches that are adaptable and affordable over the long term. Several avenues of research be pursued more intensely including the genetic makeup of the pathogen that triggers Pierce's disease, understanding the mechanisms that make grapes resistant to the disease, the possibilities of introducing predator enemies to the sharpshooter, and new ways to manage the planting of crops to help avoid spread of the disease.

Direct and Indirect Human Contributions to Terrestrial Carbon Fluxes National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Stephanie Johnson, Rob Coppock, 2004-06-30. Human induced climate change is an important environmental issue worldwide as scientific studies increasingly demonstrate that human activities are changing the Earth's climate. Even if dramatic reductions in emissions were made today, some human induced changes are likely to persist beyond the 21st century. The Kyoto Protocol calls for emissions reporting that separates out management induced changes in greenhouse gases from those changes caused by indirect human effects (e.g. carbon dioxide fertilization, nitrogen deposition) or precipitation changes, natural effects, and past practices on forested agricultural lands. This book summarizes a September 2003 workshop where leaders from academia, government, and industry came together to discuss the current state of scientific understanding on quantifying direct human induced change in terrestrial carbon stocks and related changes in greenhouse gas emissions and distinguishing these changes from those caused by indirect and natural effects.

Diagnosis and Control of Johne's Disease National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Diagnosis and Control of Johne's Disease, 2003-09-13. Johne's Disease is a chronic progressive intestinal disease caused by infection with *Mycobacterium avium* subspecies *paratuberculosis* Map that affects primarily ruminant animals. In recent decades there has been growing concern over the lack of effective control of this disease and questions have arisen regarding the possibility that Map infection could be a cause of some cases of Crohn's disease in humans. This report presents a broad outline of the steps that should be taken to control Johne's disease, reduce the spread of Map, and minimize effects of the disease in animals. The report also describes the weaknesses of our current research agenda and provides recommendations for a new research strategy to resolve the question of whether there is a link between Johne's and Crohn's diseases.

Animal Biotechnology National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Board on Agriculture and Natural Resources, Committee on Agricultural Biotechnology, Health, and the Environment, Committee on Defining Science-Based Concerns Associated with Products of Animal Biotechnology, 2002-12-29. Genetic based animal biotechnology has produced new food and pharmaceutical products and promises many more advances to benefit humankind. These exciting prospects are accompanied by considerable unease, however, about matters such as safety and ethics. This book identifies science based and policy related concerns about animal biotechnology, key issues that

must be resolved before the new breakthroughs can reach their potential The book includes a short history of the field and provides understandable definitions of terms like cloning Looking at technologies on the near horizon the authors discuss what we know and what we fear about their effects the inadvertent release of dangerous microorganisms the safety of products derived from biotechnology the impact of genetically engineered animals on their environment In addition to these concerns the book explores animal welfare concerns and our societal and institutional capacity to manage and regulate the technology and its products This accessible volume will be important to everyone interested in the implications of the use of animal biotechnology

Air Emissions from Animal Feeding Operations National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Board on Agriculture and Natural Resources, Committee on Animal Nutrition, Ad Hoc Committee on Air Emissions from Animal Feeding Operations, 2003-05-07 Air Emissions from Animal Feeding Operations Current Knowledge Future Needs discusses the need for the U S Environmental Protection Agency to implement a new method for estimating the amount of ammonia nitrous oxide methane and other pollutants emitted from livestock and poultry farms and for determining how these emissions are dispersed in the atmosphere The committee calls for the EPA and the U S Department of Agriculture to establish a joint council to coordinate and oversee short and long term research to estimate emissions from animal feeding operations accurately and to develop mitigation strategies Their recommendation was for the joint council to focus its efforts first on those pollutants that pose the greatest risk to the environment and public health
