Lactic Acid Bacteria: Genetics, Metabolism and Applications Roland J. Siezen, Jan Kok, Tjakko Abbe, Gertjan Schaafsma, 2013-06-29 Foods fermented with lactic acid bacteria are an important part of the human diet Lactic acid bacteria play an essential role in the preservation of food raw materials and contribute to the nutritional organoleptic and health properties of food products and animal feed The importance of lactic acid bacteria in the production of foods throughout the world has resulted in a continued scientific interest in these micro organisms over the last two decades by academic research groups as well as by industry This research has resulted in a number of important scientific breakthroughs and has led to new applications The most recent of these advances is the establishment of the complete genome sequences of a number of different lactic acid bacterial species To communicate and stimulate the research on lactic acid bacteria and their

applications a series of tri annual symposia on lactic acid bacteria was started in 1983 under the auspices of the Netherlands Society for Microbiology NVVM which was later also supported by the Federation of European Microbiological Societies FEMS The aim of these state of the art symposia is to offer a unique platform for universities institutes and industry in this area of biotechnology to present recent work to obtain information on new developments and to exchange views with colleagues from all over the world on scientific progress and applications The growing number of participants at these symposia has been a clear demonstration of the interest of the international industrial and scientific community in this area of research The 7th Symposium is based on a number of plenary lectures that review the scientific progress of the last years in the different areas of research on lactic acid bacteria and which are documented in this special issue of Antonie van Leeuwenhoek Breast Cancer: Scientific and Clinical Progress Marvin A. Rich, Jean Carol Hager, Diana M.

Lopez, 2012-12-06 Effective control of breast cancer depends on three types of research accomplishment understanding the disease s origins and progression successfully applying this knowledge to methods of detection diagnosis and treatment and finding ways to make these advances truly available to the public as effectively as possible The significant progress that is occurring across this entire spectrum of pioneering investigation is reflected in these proceedings of the 1987 biennial conference of the International Association for Breast Cancer Research The first section of the book focuses on oncogenes and chemical effectors that may play key roles in early cell transformation leading to breast cancer Research discussed includes identification of specific oncogenes which appear to be involved in the disease study of their activation and expression examination of the biological effects of various growth factors isolated from breast cancer cell lines and investigation of the molecular mechanisms by which estrogens promote and stimulate growth of breast cancers The second group of chapters deals with several other complex factors and phenomena which may influence tumor formation in the breast for example expression of abnormalities by fibroblasts disruption of epithelial mesenchymal interactions and loss of ability nili to synthesize normal basal lamina resulting in alterations in the extracellular matrix Clarification of the processes of normal mammary gland development and differentiation is central to much of this work *Biotechnology And Biological Frontiers* Philip H Abelson, 2019-03-04 Split into two sections Part I of this volume from Science is devoted to a broad

sampling of the status of a revolution in applied biology The emphasis of Part II in this volume is fundamental research rather than techniques or practical applications **Value Addition and Product Diversification in Sugarcane** Giriyapura Shivalingamurthy Suresha, Gopalareddy Krishnappa, Murali Palanichamy, Huskur Kumaraswamy Mahadeva Swamy, Hari Kuppusamy, Hemaprabha Govindakurup, 2024-11-23 This contributed volume covers sugarcane byproducts preservation functional foods bioethanol and liquid fuels It focuses on advancements in value addition and its applications in food and other industries sugarcane biomass and its utilization in the energy sector Sugarcane production has been increasing for several decades however it has only recently gained importance for product diversification and bioenergy applications The

book also explores biopharming molecular pharming genomics for product diversification biotechnological manipulations for bioenergy applications metabolic engineering bioenergy policy economics and market intelligence This book provides an opportunity to compile recent technological advancements in value addition and product diversification offering insights into the role of sugarcane in green fuels and global energy security in a sustainable manner This book caters to the needs of various stakeholders including students researchers policymakers and academicians working in functional foods nutraceutical research bioenergy and synthetic biology It is also designed for personnel in the sugar and food industries green fuels chemical industries and textile and recycling industries
