Metadata Best Practices and Guidelines Jung-ran Park, 2014-07-10 Metadata best practices and guidelines function as an essential mechanism for metadata planning application and management and interoperability There has been a rapidly growing body of digital repositories and collections accordingly a wide range of digital projects and initiatives have adopted various metadata standards Because of differences in the formats and knowledge domains of the resources it is inevitable that these digital projects and initiatives may have different needs regarding metadata Therefore when a metadata standard is adopted in various institutions and organizations it may have to be modified to reflect the community needs and characteristics of given resources The flexibility and complex structure of natural language allow for the representation of a concept in various ways Thus common understanding and definitions of terms in a given metadata standard is essential for quality metadata generation management interoperability and resource sharing This opens up a pressing need for a systematic examination of documentation practices an area that up to now has been relatively unexplored This book begins to fill the research gap through an empirical assessment of metadata guidelines and best practices This is a book published as a special issue of the Journal of Library Metadata

Marine Microbiomes: Towards Standard Methods and Best Practices Stéphane Pesant, Kelly D. Goodwin, Catarina Magalhães, Anaïs Lacoursière-Roussel, 2023-12-14 A decade of technological advances and research on the human microbiome has re defined our understanding of biological systems and now offers diagnostic tools and new approaches to human health Likewise marine ecosystems are driven by their microbiome the ensemble of microscopic organisms that inhabit the water column sediments and aquatic organisms and regulate most fluxes of energy and matter While the human microbiome is composed principally of bacteria the marine microbiome has a much broader ensemble of microscopic organisms with sizes spanning from viruses of a few tens of nanometres to metazoans of several centimetres Advances in high throughput imaging and sequencing are emerging in aquatic science providing important insights into ecosystem structure and functions and contributing to develop new indicators of ecosystem health and potential hazards to living resources and humans A number of research exploration and monitoring programs such as the Tara Oceans global expedition and the Marine Biological

Observing Network MBON and the rising popularity of environmental DNA eDNA already led to a wealth of data. However, the wide range of methodologies used in this early exploration phase poses a challenge to integrative studies, prompting community responses such as the Genomic Standards Consortium. This Research Topic will foster cross-community exchange of standards and best practices. It is an opportunity for the different communities working on marine microbiomes to discuss the advantages and the limitations of their sampling and analysis methods. The collection of papers will constitute a knowledge base aimed at 1) addressing the integration of existing observations from heterogeneous methods and data types and 2) working towards cross-community standards and best practices for future observations and experiments. This Research Topic will publish comprehensive methodological papers that review a sufficiently large body of field or experimental work. Supporting meta-data such as environmental context, sampling materials, sample treatments, extraction and imaging yields must be provided and should preferably be uploaded to an online sample registry such as BioSamples. Protocols and analytical methods should preferably be uploaded to an online repository such as Protocols.io. We welcome contributions from communities working in different environments, focus on marine systems but also interested in estuarine and freshwater systems, coastal, open ocean and deep sea regions, benthic, pelagic and aerosol environments. We strongly encourage contributions from communities involved in networks of local observatories and long-term monitoring programs, regional basin-scale surveys and global expeditions, biodiversity linked to economic sectors such as pharmaceuticals and bioengineering, environmental and health assessments linked to economic sectors such as aquaculture, fisheries, seabed mining, wind farms and oil and gas.

Radical Cataloging K.R. Roberto, 2015-03-07. This collection of critical and scholarly essays addresses the state of cataloging in the world of librarianship. The contributors, including Sanford Berman, Thomas Mann and numerous front-line library workers, address topics ranging from criticisms of the state of the profession and traditional Library of Congress cataloging to methods of making cataloging more inclusive and helpful to library users. Other essay topics include historical overviews of cataloging practices and the literature they generate, first-person discussions of library workers' experiences with cataloging or metadata work and the implications behind what materials get cataloged, who catalogs them and how. Several essays provide a critical overview of innovative cataloging practices and the ways that such practices have been successfully integrated in many of the nation's leading libraries. Exploring Contemporary Classification Practices Jack Andersen,Joacim Hansson,2025-07-15 The contributions in Exploring Contemporary Classification Practices analyse various aspects of classification and their importance to contemporary debates surrounding cultural heritage and information access Specific focus is on systems of classification media technologies and cultural institutions such as libraries archives and museums and how they respond to challenges including classificatory bias truth neutrality institutional tradition and technological innovation Raising awareness of classification practices in modern culture serves to emphasize how sorting things into categories is both an everyday accomplishment and a highly cultural and political activity with consequences for those who are classified and for those who classify Throughout this book classification is defined as the practice and activity of systematically ordering and categorizing entities to bring structure and understanding to diverse contexts This book addresses several timely issues both in terms of theoretical advancement and empirical diversity The scholarly discussion on the classification and organization of knowledge has developed with digital technologies from a bibliographic paradigm into something much wider as the need for metadata and classification has become critical for usability and legitimacy This development has also led research on classification and knowledge organization to confront a new post humanist reality with not only emerging varieties of information currents in society but also the development of new theoretical and methodological strands such as post colonial and intersectional perspectives and digital humanities methodologies In doing so this book seeks to address critical questions for the archives library and museum sectors concerning the organization of information Exploring Contemporary Classification Practices will therefore be of interest to academics researchers and practitioners with interests in library and information science archives cultural heritage and digital heritage
