Metal cutting is a science and technology of great interest for several important industries such as automotive aeronautics aerospace moulds and dies biomedicine etc Metal cutting is a manufacturing process in which parts are shaped by removal of unwanted material The interest for this topic increased over the last twenty years with rapid advances in materials science automation and control and computers technology The present volume aims to provide research developments in metal cutting for modern industry This volume can be used by students academics researchers and engineering professionals in mechanical manufacturing and materials industries

THE SERIES ADVANCED MECHANICAL ENGINEERING Currently it is possible to define mechanical engineering as the branch of engineering that involves the application of principles of physics and engineering for the design manufacturing automation and maintenance of mechanical systems Mechanical Engineering is closely related to a number of other engineering disciplines This series fosters information exchange and discussion on all aspects of mechanical engineering with a special emphasis on research and development from a number of perspectives including but not limited to materials and manufacturing processes machining and machine tools tribology and surface engineering structural mechanics applied and computational mechanics mechanical design mechatronics and robotics fluid mechanics and heat transfer renewable energies biomechanics nanoengineering and nanomechanics In addition the series covers the full range of sustainability aspects related with mechanical engineering

Advanced Mechanical Engineering is an essential reference for students academics researchers materials mechanical and manufacturing engineers and professionals in mechanical engineering      *Mechanics of the Metal Cutting Process* Mylon Eugene Merchant,1945      **Metal Cutting Principles** Milton Clayton Shaw,1984

The first paperbound edition of a previously acclaimed title this practical volume provides needed guidance on one of the most important methods of removing unwanted material in the production of chemical components It identifies problem areas and relates performance to fundamentals of physics chemistry materials behavior heat transfer solid mechanics and tribology illustrating how solutions to new machining problems may be achieved by application of scientific principle The two dimensional cutting process is analyzed with special attention paid to cutting temperatures tool wear and tool life as well as the integrity of the finished surface Machining economics and the optimization of processes are explained in fundamental terms while the complexities of the cutting process are closely scrutinized      *Metal Cutting Mechanics (translated from the Russian)*. Zorev NN.,1966      **Metal Cutting Theory** Hanmin Shi,2018-02-27
