Polymer Process Engineering R. Griskey, 2012-12-06 Polymers are ubiquitous and pervasive in industry science and technology These giant molecules have great significance not only in terms of products such as plastics films elastomers fibers adhesives and coatings but also less obviously though none the less importantly in many leading industries aerospace electronics automotive biomedical etc Well over half the chemists and chemical engineers who graduate in the United States will at some time work in the polymer industries If the professionals working with polymers in the other industries are taken into account the overall number swells to a much greater total It is obvious that knowledge and understanding of polymers is essential for any engineer or scientist whose professional activities involve them with these macromolecules Not too long ago formal education relating to polymers was very limited indeed almost nonexistent Speaking from a personal viewpoint I can recall my first job after completing my Ph D The job with E I Du Pont de Nemours dealt with polymers an area in which I had no university training There were no courses in polymers offered at my alma mater My experience incidentally was the rule and not the exception *Metal progress: materials and process engineering data book* Allen G.
