Metal Sites in Proteins and Models H.A.O. Hill,P.J. Sadler,A.J. Thomson,1999-04-01 Biological chemistry is a major frontier of inorganic chemistry Three special volumes devoted to Metal Sites in Proteins and Models address the questions how unusual entatic are metal sites in metalloproteins and metalloenzymes compared to those in small coordination complexes and if they are special how do polypeptide chains and co factors control this The chapters deal with iron with metal centres acting as Lewis acids metals in phosphate enzymes with vanadium and with the wide variety of transition metal ions which act as redox centres They illustrate in particular how the combined armoury of genetics and structure determination at the molecular level are providing unprecedented new tools for molecular engineering Metal Sites in Proteins and Models H.A.O. Electron Paramagnetic Resonance Bruce C Gilbert, N M Atherton, M J Davies, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical

Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Chemistry of Iron J. Silver, 2012-12-06 This book is designed to be of use to the reader in two different ways First it is intended to provide a general introduction to all aspects of iron chemistry for readers from a variety of different scientific backgrounds It has been written at a level suitable for use by graduates and advanced undergraduates in chemistry and biochemistry and graduates in physics geology materials science metallurgy and biology It is not designed to be a dictionary of iron compounds but rather to provide each user with the necessary tools and background to pursue their individual interests in the wide areas that are influenced by the chemistry of iron To achieve this goal each chapter has been written by a contemporary expert active in the subject so that the reader will benefit from their individual insight Although it is generally assumed that the reader will have an understanding of bonding theories and general chemistry the book is well referenced so that any deficiencies in the reader's background can be addressed The book was also designed as a general reference book for initial pointers into a scientific literature that is growing steadily as the understanding and uses of this astonishingly versatile element continue to develop To meet this aim

the book attempts some coverage of all aspects of the chemistry of iron not only outlining what understanding has been achieved to date but also identifying targets to be aimed at in the future

Theoretical Biochemistry Leif A. Eriksson, 2001-02-19 Theoretical chemistry has been an area of tremendous expansion and development over the past decade from an approach where we were able to treat only a few atoms quantum mechanically or make fairly crude molecular dynamics simulations into a discipline with an accuracy and predictive power that has rendered it an essential complementary tool to experiment in basically all areas of science This volume gives a flavour of the types of problems in biochemistry that theoretical calculations can solve at present and illustrates the tremendous predictive power these approaches possess A wide range of computational approaches from classical MD and Monte Carlo methods via semi empirical and DFT approaches on isolated model systems to Car Parinello QM MD and novel hybrid QM MM studies are covered The systems investigated also cover a broad range from membrane bound proteins to various types of enzymatic reactions as well as inhibitor studies cofactor properties solvent effects transcription and radiation damage to DNA
