Fricker, 2012-12-06 The discovery of the antitumour activity of cisplatin in 1965 and its subsequent introduction into clinical trials in 1971 was the catalyst for a major international research effort investigating the potential of metal compounds in cancer therapy Cisplatin now occupies an important place in the armamentarium of the oncologist due to its effectiveness in the treatment of testicular cancer A second generation analogue carboplatin offers reduced toxicity together with therapeutic activity which gives it a place in the front line therapy of genitourinary cancers These and other successes have encouraged the search for novel metal based drugs for cancer therapy Research has shown that metal compounds have potential for activity not only as cytotoxic antitumour agents but also in areas such as adjuvant therapy diagnosis and immunotherapy The aim of this book is to review and describe the major achievements and developments arising from this international research effort The

contributing authors come from laboratories throughout Europe and America and represent the many disciplines characteristic of this research such as clinical research pharmacology tumour biology and inorganic medicinal chemistry

Platinum Coordination Complexes in Cancer Chemotherapy Miles P. Hacker, Evan B. Duple, Irwin H.

Krakoff, 2012-12-06 The idea for convening a Fourth International Symposium on Platinum Coordination Complexes in Cancer Chemotherapy was born in an assembly of researchers from the Vermont Regional Cancer Center and the Norris Cotton Cancer Center who shared a common interest in metal complexes It was agreed by those assembled that sufficient time had passed since the Third International Symposium on Platinum Coordination Complexes in Cancer Chemotherapy held in 1976 at the Wadley Institutes of Molecular Medicine in Dallas Texas during which several advances in the chemistry biochemistry pharmacology and clinical use of platinum complexes had occurred to warrant a fourth symposium Furthermore intensive investigations in progress were bringing sophisticated methodologies to bear on the problems in the field clinical trials were yielding interesting results and unique approaches to cancer therapy were being designed Therefore an organizing committee was formed and planning culminated in the symposium which was held in Burlington Vermont June 22-24 1983

Gold and its Complexes in Anticancer Chemotherapy Mohammad Younus Wani, Manzoor Ahmad Malik, 2021-02-11

This book presents an overview of cancer and the genesis and development of different treatment strategies and modalities against cancer The emergence of gold and its complexes as promising anticancer chemotherapeutic agents have the potential to substitute or replace the platinum based chemotherapeutic agents Gold complexes have demonstrated considerable antiproliferative properties chiefly attributed to their anti mitochondrial effects they make gold complexes excellent candidates as anticancer agents compared to their platinum based counterparts This book provides a critical review of recent advances made in the development of gold complexes as anticancer agents In this context it examines a number of different ligand architectures provides comprehensive information on gold complexes mechanism of action and toxicity issues and in closing outlines future research directions

Transition Metal Complexes as Drugs and Chemotherapeutic Agents N.

Farrell, 2012-12-06 When this book was first conceived as a project the expanding interest in the clinical use of platinum and gold complexes made a survey of the relevant biological properties of metal complexes timely and appropriate This timeliness has not diminished during the gestation and final publication of the manuscript The introduction contains an explanation of the layout and approach to the book which I wrote as an overall survey of the wide variety of biological properties of metal complexes Hopefully the reader will see the parallels in mechanisms and behavior even in different organisms The writing was considerably helped by the enthusiasm and confidence totally unearned on my part in the project of Professor Brian James and I owe him my special thanks I also owe a great debt of gratitude to my colleagues and especially to Eucler Paniago of the Universidade Federal de Minas Gerais for their comprehension and for the initial leave of absence which allowed me to begin the project To those who read some or all of the manuscript and made suggestions Bernhard Lippert Kirsten Skov and

Tom Tritton as well as the editor's reviewer I am also grateful. As usual the final responsibility for errors or otherwise rests with the author. **Ruthenium and other non-platinum metal complexes in cancer chemotherapy** Enzo Alessio, 1990

Key Features: Overview of metal complexes and oxidation states; Synthesis of metal complexes from N-heterocyclic carbene and Schiff base ligands; Biomedical applications including therapeutics and diagnostics; Use of metal complexes in energy storage and catalysis; Applications in antibacterial and antifungal treatments; Metal complexes as sensors and in analytical chemistry. *Cancer Treatment Reports*, 1978. A Commemorative Issue in Honor of Professor Nick Hadjiliadis: Metal Complex Interactions with Nucleic Acids and/or DNA Sotiris K Hadjikakou, Christina N.

Banti, 2019-02-05 This book is a printed edition of the Special Issue: A Commemorative Issue in Honor of Professor Nick Hadjiliadis: Metal Complex Interactions with Nucleic Acids and/or DNA that was published in IJMS. Cytotoxic, Mutagenic and Carcinogenic Potential of Heavy Metals Related to Human Environment N. Hadjiliadis, 2012-12-06 Environmental pollution is one of the main problems to confront humanity with the heavy metals occupying a leading role among the most pernicious pollutants. The metals cause cancer and other sicknesses. Their cytotoxic, mutagenic, and carcinogenic potentials are not fully understood, and any thorough investigation demands the combined efforts of scientists drawn from many different disciplines. But the effects of heavy metals are not all negative; some like cis-DDP and some ruthenium and tin complexes have antitumour activity. The idea underlying the present work is therefore to present a multidisciplinary perspective on heavy metals in the environment, affording a better understanding of their action on human organisms and health, aiming to make them less polluting and more environmentally friendly. **Research Awards Index**, 1982

Environmental Health Perspectives, 1993. *Metal Complex - DNA Interactions* Nick Hadjiliadis, Einar Sletten, 2009-03-30 Metal ions and metal complexes have long been recognized as critically important components of nucleic acid chemistry, both in regulation of gene expression and as promising therapeutic agents. Understanding how metal complexes interact with DNA has become an active research area at the interface between chemistry, molecular biology, and medicine. *Metal Complex DNA Interactions* provides a comprehensive overview of this increasingly diverse field, presenting recent developments and the latest research with particular emphasis on metal-based drugs and metal ion toxicity. The text is divided into four parts: Basic Structural and Kinetic Aspects; includes chapters on sequence-selective metal binding to DNA and

thermodynamic models Medical Applications focuses on anticancer platinum drugs including discussions on DNA repair in antitumor effects of platinum drugs and photo dynamic therapy DNA Recognition Nucleases and Sensor describes probes for DNA recognition artificial restriction agents metallo DNAszymes for metal sensing applications and metal ion independent catalysis in nucleic acid enzymes Toxicological Aspects deals with structural studies of mercury DNA interactions chromium induced DNA damage and repair and the effect of arsenic and nickel on DNA integrity This book will be a valuable resource for academic researchers and professionals from a range of pharmaceutical and chemical industries particularly those involved in the development of new and less toxic anticancer metallo drugs and in the field of environmental and toxicological chemistry

Platinum and Other Metal Coordination Compounds in Cancer Chemotherapy Stephen B.

Howell, 2013-11-11 Taken together the data presented in this review and work by many other investigators support the notion that DNA excision repair is important in a tumor cell's resistance to platinum compounds Inhibition of this repair system by combination chemotherapy with the excision repair inhibitors HU and Ara C produces synergistic cell kills and increased levels and persistence of DNA interstrand crosslinks The studies with cis DDP and DDP in combination with UV induced thymine dimers suggest that there may be competition for DNA repair enzymes between the dimer and the platinum lesion Whether the competing lesion is an intrastrand crosslink interstrand crosslink or platinum monoadduct or all of these lesions cannot be determined The similarity between an intrastrand crosslink and a cyclobutane dimer suggests that these lesions may compete for repair However the increased peak levels of interstrand crosslinks and increased persistence of these lesions at later time points suggest that this lesion may also be a substrate for the repair system These observations may be of clinical relevance Recently Dr Kathy Albain of our institution has completed a Phase III I study using a 12 hour pretreatment with HU and Ara C in patients prior to their cis DDP therapy She observed a significant number of responders in this trial 54 She is currently completing a second Phase III study substituting IV HU for the oral formulation We anticipate initiating other clinical trials based upon these observations
