**Metal Contamination of Food** Conor Reilly, 1980 **Potential Exposure and Risk Associated with Metal Contamination in Foods** Luciana M. Coelho, 2016 Humans require several trace elements as components of the diet Some of these elements are required in extremely small quantities only micrograms per day On the other hand in higher concentrations some elements may also have deleterious even lethal effects Metals such as arsenic chromium Cr lead Pb and mercury Hg are naturally occurring chemical compounds The contamination of food with these metals occurs mainly through human activities such as farming and industry or from contamination during food processing and storage People can be exposed to these metals by ingesting contaminated food or water and their accumulation in the body can lead to harmful effects over time The main objective of this chapter is to provide a literature review on the various types of foodborne poisoning caused by the contamination of food with arsenic Cr Pb and Hg and on food safety issues associated with the presence of these metals in food Research findings from various studies carried out to examine the relationship between metal exposure and the adverse health effects of metals are addressed Heavy Metal Contamination in the Environment Veer Singh, Ashish Kumar, Vishal Mishra, Sachchida Nand Rai, 2024-12-30 This reference book explores the multifaceted problem of heavy metal contamination in the environment Through its in depth analysis the book provides a thorough overview of the sources and pathways of heavy metals their persistence in ecosystems and the resulting health impacts on individuals and ecosystems The chapters explore the diverse sources of contamination including industrial activities mining agriculture and urbanization while examining the types of heavy metals found in the environment and their toxicological properties The book further reviews the profound health

effects associated with heavy metal exposure such as neurological disorders developmental abnormalities carcinogenicity and organ damage Furthermore the book provides insights into risk assessment methodologies regulatory frameworks and guidelines aimed at controlling and minimizing heavy metal exposure It highlights the challenges and gaps in current regulations identifies potential areas for improvement and presents analytical techniques for heavy metal analysis and removal This book is an important source for researchers and professionals working in the fields of environmental science toxicology and public health
