### **Metal Contamination of Food**

Conor Reilly, 1980 Potential Exposure and Risk Associated with Metal Contamination in Foods Luciana M. Coelho, 2016 Humans require several trace elements as components of the diet Some of these elements are required in extremely small quantities only micrograms per day On the other hand in higher concentrations some elements may also have deleterious even lethal effects Metals such as arsenic chromium Cr lead Pb and mercury Hg are naturally occurring chemical compounds The contamination of food with these metals occurs mainly through human activities such as farming and industry or from contamination during food processing and storage People can be exposed to these metals by ingesting contaminated food or water and their accumulation in the body can lead to harmful effects over time The main objective of this chapter is to provide a literature review on the various types of foodborne poisoning caused by the contamination of food with arsenic Cr Pb and Hg and on food safety issues associated with the presence of these metals in food Research findings from various studies carried out to examine the relationship between metal exposure and the adverse health effects of metals are addressed

*Sustainable Management of Environmental Contaminants* Tariq Aftab, 2022-11-04 Environmental contaminants are chemicals that accidentally or deliberately enter the environment often but not always as a result of human activities Some of these contaminants may have been manufactured for industrial use and because they are very stable they do not break down easily If released to the environment these contaminants may enter the food chain Other environmental contaminants are naturally occurring chemicals but industrial activity may increase their mobility or increase the amount available to circulate in the environment allowing them to enter the food chain at higher levels than would otherwise occur Environmental contaminants influence the physiological cell reactions at different and heterogeneous basics and lead to altering in normal cell function

primarily at the molecular and biochemical level Molecular responses to such common environmental stresses have been studied intensively over the last few years in which there is an intricate network of signaling pathways controlling perception of these environmental stress signals the generation of second messengers and signal transduction Recent advances in many areas of plant and microbial research including genotyping make scientists optimistic that valuable solutions will be found to allow deployment commercialization of strategies better able to tolerate these environmental stresses Environmental remediation was historically viewed as an inherently sustainable activity as it restores contamination however researchers and practitioners are increasingly recognizing that there can be substantial environmental footprints and socioeconomic costs associated with remediation Sustainability is an imperative in the emerging green and sustainable remediation movement which is reshaping the entire remediation industry Understanding the significant roles of sustainable or eco friendly approaches in mitigating environmental contaminants the current subject has recently attracted the attention of scientists from across the globe This comprehensive volume Sustainable Management of Environmental Contaminants Eco friendly Remediation Approaches highlights the various prospects involved in current scenario The current volume comprises the chapters from diverse areas dealing with biotechnology microbial technology nanotechnology molecular biology green and sustainable remediation etc I am hopeful that this volume will furnish the requisite of all those who are working or have interest in the current topic
